Hey, Corporate America! Show Taxpayers Some Appreciation!
By Ralph Nader

If you work for a corporation, ask your own employer to support
Taxpayer Appreciation Day. (We've included contact information at the
end of the article.)

Take Action Now! April 15 is just around the corner. Please let us know
what action you've taken and what type of response you receive at
taxday@votenader.org

I'm going to go out on a limb here and suggest that April 15th of each
year be designated Taxpayer Appreciation Day, a day when corporations
receiving taxpayer subsidies, bailouts, and other forms of corporate
welfare can express their thanks to the citizens who provide them.

Though it may not be evident, quite a few industries -- and the profits

they generate -- can be traced back to taxpayer-financed programs whose fruits have been given away to (mostly) larger businesses.

Taxpayer dollars have often funded discoveries made by NASA, the Department of Defense, and the National Institutes of Health and other federal agencies. In many instances the rights to those discoveries were later given away to companies that brag about them as though they were the fruits of their own investments. Taxpayer dollars have played a major role in the growth of the aviation and aerospace, biotechnology, pharmaceutical, and telecommunications industries -- to name only a few.

Though corporate America insists it must file yearly income taxes just like everyone else, it is responsible for a sharply decreasing portion of federal tax dollars -- despite record profits. Despite record profits, corporate tax contributions to the federal budget have been steadily declining for fifty years and now stand at a mere 7.4% of the federal government income because of the loopholes they driven into our tax laws. The average citizen pays more than four to five times that in federal income tax revenues (with the single exception of payroll taxes).

Clearly corporations that believe they are self-reliant are often, in fact, dependent on taxpayer funds to maintain their financial viability. The least they could do is thank us. Which is why we need something like Taxpayer Appreciation Day. Consider the following:

General Electric bought RCA (which owned NBC) in the mid-1980s with funds it was able to save by using an outrageous tax loophole passed by Congress in 1981. That loophole allowed GE to pay no federal taxes on three years of profits, totaling more than $6 billion dollars. It also gave them a $125 million refund! That gave GE the money to buy RCA. GE should arrange a media extravaganzas on NBC to say "Thank you, taxpayers.” Pharmaceutical companies constantly ballyhoo their discoveries in advertisements. What they don't tell us is that many of the important nonredundant therapeutic drugs -- including most anticancer drugs -- were developed, in whole or in part, with taxpayer money and then given to them by the NIH and the Defense Department. Bristol-Meyers Squibb, for example, controls the rights to Taxol, an anticancer drug developed all the way through human clinical trials at the National Institutes of Health with $31 million of taxpayer moneys.

Pharmaceutical companies spend billions on advertisements each year. Perhaps they should consider a big "Thank You, Taxpayers" ad campaign every April 15, if only to remind them where their drug research and development subsidies come from.

Mining companies often receive vast sweetheart deals from taxpayers. Under the 1872 Mining Act hard rock mining companies are allowed to purchase mining rights to public land for only $5 an acre, no matter how valuable the minerals on (or in) that land might be. A Canadian company recently mined $9 billion in gold on federal land in Nevada after using the Mining Act to purchase the mining rights to it for about $30,000. Mining companies owe the taxpayers their gratitude.

Television broadcasters were given free license to use public airwaves (worth around $70 billion) by a supine Congress in 1997. They too should thank us. What about all those professional sports corporations that play and profit in taxpayer-funded stadiums and arenas? The owners and players should thank the fans/taxpayers who -- in spite of their largess -- still must pay through the nose for tickets. For years McDonalds received taxpayer subsidies to promote its products overseas as part of a foreign market access program. Now McDonalds is a ubiquitous brand name worldwide, but has it ever thanked the taxpayers who underwrote its efforts? Then there are the HMOs, hospitals, and defense contractors that have had their legal fees reimbursed by the taxpayers when our government prosecutes them for fraud or cost overruns. Those companies have great public relations firms that can help them show us their gratitude. Corporate America has taken too much from us for too long. It's time it shows us a little bit of appreciation.

"vanguard"
philosophy, which states that a vanguard of intellectuals is needed to lead the proletariat in establishing a worker's utopia. It fosters the worldwide revolution through its membership in the Revolutionary International Movement (RIM). It is through this affiliation that the RCP is related to two organizations listed by the State Department as terrorist organizations; the Communist Party of Peru (Shining Path/Sender Luminoso) and the Kurdish Workers Party (PKK) are are closely associated with RIM. (The PKK is no longer a formal member of RIM; however, it was one of RIM's founders. The Shining Path is still a member.) Other groups that comprise the Revolutionary Internationalist Movement are the Communist Party of Turkey/Marxist-Leninist, the Union of Iranian Communists (Sarbedaran)and the Nepal Communist Party.

The RIM via its publication A WORLD TO WIN declared its belief in the Palestinian intifada. The February 28, 2002, edition stated "the Revolutionary Internationalist Movement once again reaffirms its unwavering support .and calls on all revolutionary and progressive people to step up their actions on (the Palestinians') behalf." Another edition advised Palestinians to "link up with .the parties and organizations that make up the Revolutionary Internationalist Movement. With the weapon of Marxism-Leninism-Maoism and its military strategy, people's war, the Palestinian people's fight will surely become .more integral part of the world revolution, hastening the day when imperialism, Zionism .meet their do

The folks at AtariArchives.org are proud to announce that the full text and source code from the book SpeedScript The Word Processor for Atari Computers is now available online.

Published in 1985, the book includes the complete, commented assembly language source code for the popular Atari word processor, as well as instructions for using the program. You can also download the source (ready to assemble in Mac/65) and ready-to-run binary for use on your Atari or an emulator.

You can read the book and download the program from
     http://www.atariarchives.org/speedscript/

AtariArchives.org is always looking for volunteers. If you would like to help make classic computing books available online, contact us at
     http://www.atariarchives.org/contact/

Call for an Impeachment Inquiry of Bush and Cheney,
Get Congress to Take Action

Sign our online Petition and read below for more information:

   http://www.votenader.org/get_involved/impeach.php

HEY DUDE WHERE'S MY BUDDY!!!???
COME BACK HOME MICHAEL!!!

Ok Michael, you've had your realpolitik fling with ex-General Wesley
Clark. Your endorsed Presidential candidate in the Democratic Primaries
has withdrawn. It is time for you to come home, to join your buddies and
resume your only genuine role which is that of defiance and resistance.
Compliance and assistance with the Democrats does not accord with your
past, your character, your bold writings and, most memorably, your long
corrosive assaults on the Party that betrayed the working classes and
plunged our country into corporate globalization. Remember, Michael,
you're the flinty man from Flint, Michigan. You've never forgotten your
roots. The heady Hollywood, Manhattan scene with the celebrities and
Academy Awards have never gotten to your head but rather have gotten
into your deserving pockets. How we all recall your standing before one
billion people in Los Angeles at the televised Academy Awards in 2003
and, breaking the customary cant of the awardees, throwing the gauntlet
down to George W. Bush and his "fictitious" war mongering.

Now the War has become a quagmire, with both Republicans and Democrats
complicit (check the votes in Congress). The Draft may be on the way. So

what are you doing going on the Al Franken Show very nearly breaking down when Al Gore (he of the pro NAFTA/GATT, anti-worker, regime-change, Iraq-bombing, lethal sanctions on half a million children Administration) called and thought you were apologizing. You have nothing to apologize for, Michael. Gore has a lot to apologize for-blowing the election he won in Florida and the country as a whole and for blowing, with Bill Clinton, the many opportunities the rich-booming Nineties and the collapse of the Soviet Union gave this country to turn a peace dividend into a pro-worker, pro-environment, pro-consumer and anti-poverty resurgence.

Come back and join our Presidential campaign, Michael. Talk to those "Reagan Democrats"-those 35% of union members who still vote Republican and against their own interests-as only you can. Michael, if you go pumping for the Democratic Party this year, just what are you going to say to the unemployed steelworkers near Sparrows Point in Maryland? To the megathousands of laid off textile and furniture workers in North and South Carolina? To the abandoned auto workers waiting and waiting near their empty factories that went to repressive countries? To the millions of blue-collar workers, who fought our wars, only to learn that the two parties won't fight for their company pensions and health insurance? Are you going to tell them how the Democratic Party pushed through the WTO, let their pensions erode or disappear, were too busy collecting checks from the corporate bosses to pay attention to the corporate crime wave that looted and drained trillions of dollars from millions of workers, their retirement and small investments? Will you tell them that the cowardly Democrats, who couldn't win the fewer elections they are now not losing without the labor vote, won't even mount a determined drive to repeal the notorious, union-blocking Taft Hartley Act?

How can you be free to be what you are, or to depress Bush's vote, to jolt into consciousness the moribund Democratic Party?

Hey Dude, join your real buddies! The ones you may be thinking about just don't fit either your message, your vision, or our website VoteNader.org.

Come back home Michael. The workers and the youth of America are looking for you.

Best regards,
Ralph Nader

P.S. Will you put this invitation on your website and see how your fans react to Michael Moore returning to the Nader 2004 presidential campaign? Patti Smith will reserve a big singing spot, for you, on the stage for the customary finale, PEOPLE HAVE THE POWER.

Wednesday April 14, 2004

Join the Call for an Impeachment Inquiry of Bush and Cheney

Help us Get Congress to Take Action

You can help the call for an impeachment inquiry of President Bush and Vice President Dick Cheney. Sign our online Petition.

http://www.votenader.org/get_involved/impeach.php

George W. Bush and Dick Cheney should be impeached for two reasons:

They led the United States into an illegal, unconstitutional war in Iraq.
They misled the Congress and the American people with five falsehoods that led to war.

All it takes is one Member of the House of Representatives to call for an Impeachment Inquiry to start the process to investigate the two grounds. If the House then votes by a simple majority for Articles of Impeachment, the Senate would then undertake a trial of the President and Vice President. They would only be convicted, and impeached, if two-thirds of the Senate agrees.

--

project. The
WILPF also issued a condemnation of Clinton's Cuba policy in 1998. Bernstein was also quoted as saying she believes Cuba is the paradigm of democracy.

IFCO does not limit its activity to pro-Castro factions, though. Its management maintains relationships with extremist Islamist groups as well. Walker travels frequently to Iraq, usually alongside Ramsey Clark. IFCO is a member of ANSWER Steering Committee.) Bernstein is a member of the American Muslim Council's campaign against the use of secret evidence. Clement met with Palestinians during a WILPF "solidarity" conference in May 2002. IFCO is also a fiscal sponsor of the National Coalition to Protect Political Freedom (NCPPF). The co-founder of NCPPF was the recently indicted terrorist financier Sami Al-Arian.

However, NION's links with Muslim terrorists are not just indirect, through IFCO. NION invited both Sami Al-Arian and Lynne Stewart to address their October 6, 2002 rally in Central Park. Stewart was indicted for passing messages on behalf of her terrorist client Sheikh Omar Abdul Rahman.

One of the members of NION's Advisory Board, Abdeen Jabara, is a member of the legal advisory board for the American Muslim Council. He is a past president of the Arab-American Ant-Discrimination Committee, a board member of William Kunstler's Center for Constitutional Rights, and a co-counsel with Lynne Stewart for Sheik Rahman, the terrorist convicted for the 1993 World Trade Center bombing.

The American Muslim Council is one of the current members of Al-Arian's NCPPF (the same group to which IFCO's Bernstein belongs). Leaders of the AMC have been quoted as praising Hamas and Hezbollah. Jabara's AMC advisory

board colleagues include Fakhri Al-Barzinji. Al-Barzinji is involved in
Mar-Jac Poultry, which was raided

The full text of the book The Master Memory Map for the Atari is now available
at AtariArchives.org.

Published in 1984 by Educational Software, the book is a thorough introduction
to the Atari 8-bit's memory architecture. Beginning programmers can use it to
learn the basics of PEEKs and POKEs. Advanced programmers can learn the
purpose of hundreds of memory locations, and how to access the Atari's
built-in ROM routines.

You can read the book at
     http://www.atariarchives.org/mmm/

This is the 28th classic computing book to be made available at
AtariArchives.org. We are always looking for volunteers. If you would like to
help make classic computing books available online, contact us at

A new version of the ST emulator SainT is available.

In window mode, keeping right control key pressed runs emulator at full speed

* "Pause" key used to take screenshot when demo or game is running

* Added quick image disk launch command line option to be used by great demo
database project (http://www.gamebasest.com/)

* weird bug fixed when reading .L at $ffffe on 1Mb machine (Illusion demo
"glenz vector" part)

* NULL shifter address when reset fixed (Just-Bugin and Anomaly demo reset
fixed)

* MFP IPL level interrupt bug fixed (Giga-TEX screen in "Life's a bitch" demo)

* Strange YM write behavior fixed (X-Out music) Thanks to Ben/Ovr for info !

Hi folks,

the next 1.33 release of the Atari++ emulator is available for
download at its usual place at
http://www.math.tu-berlin.de/~thor/atari++/

What's new this time:

o) Fixed a missing dependency in the *ix built-process. Seems that
libSDL requires explicit linking against libpthread on some systems.
o) Added much better emulation of color artefacts of Hi-Res images.
Thanks a lot to Slor for sending me screen-snapshots of his NTSC TV.
The colors you get are "close" to what I've seen, though the emulation
is not yet 100% perfect (it should use the RGB color space if available,
and not the Atari color space).

Finally, a couple of "annoyance" fixes:

o) Added support for the mouse wheel for SDL and X11 front-ends.
o) Added a keyboard input buffer. This helps "fast typers" like me
since the Atari is sometimes not fast enough to "catch up".

o) I also worked a bit on the CPU emulation. Not that things were
speed-critical, but I polished the code a bit so it avoids some
branch-prediction errors on the P4.

Have fun,

   Thomas

The Bush-Clinton Administrations Had Enough Information Before 9/11 to Prevent Aircraft from Becoming Missiles

Washington, DC:

Independent Presidential Candidate Ralph Nader today urged the 9/11 Commission to highlight the failure of the Bush and Clinton Administrations to take action to re-enforce the doors of aircraft cockpits noting: "This single safety step could have thwarted the events of September 11."

On April 8, when Condolezza Rice testified before the Commission Investigating September 11, she acknowledged that hardening the cockpits could have made a difference: "That would have made a difference. We weren't going to harden cockpits in the three months that we had a threat spike."

In fact, the US government had more than enough information prior to the information generated in the months prior to 9/11 to have taken action to re-enforce cockpit doors to thwart hijackers and terrorists. In addition to official intelligence scenarios about the potential for hijacked planes being used in terrorist attacks in the US against buildings, there have been 167 hijackings involving US airlines and 11 hijackings involving foreign airlines on US soil since 1970.

"It has been evident for decades that we needed to harden cockpit doors and strengthen their latches. Some foreign airlines have installed just that safeguard. The failure of the federal government for years to

address this despite clear evidence of the need is a tribute to how our government has deregulated mechanisms for national security. The resistance by airlines and aircraft manufacturers sent the soporific FAA into inaction, despite long time requests for action by safety groups and aviation security experts. If our government, sometime over the last 30 years, had been responsive, this single act would have made it much more difficult for the terrorism of 9/11 to have succeeded in turning aircrafts into missiles." said Ralph Nader. "The 9/11 Commission, before its final report, needs to research this situation and come to a judgment about the reasons for failing to protect airline passengers and persons on the ground."

Break out the near-letter-quality dot matrix. Buy a fresh box of fan-fold paper. It's time to put your old printer to work.

The full text of the book "The Epson Connection: Atari XE/XL" by Leigh Edward Zeitz is now online at AtariArchives.org. Published in 1986, the book shows how to get the most from an Epson printer in tandem with an Atari 8-bit computer.

The book's 13 chapters include descriptions, photos, and specifications of 80's era Epson printers; details about using control codes to adjust your printer's output; and tips on using a printer for home finances, schoolwork, telecommuting, and for other applications.

It is available at http://www.atariarchives.org/epson/

This is the 29th classic computing book to be made available at AtariArchives.org.

Atari.Org is pleased to announce the release of Audio Exposure ST, a remix CD
of classic tunes from Atari ST.

The CD is produced by Richard Davey of The Little Green Desktop and
mirror-hosted by Atari.Org.

The tunes remixed are:

* Rings of medusa
* Syntax Terror Fletch
* Gods
* Goldrunner
* The Killing Game Show
* Mindbomb demo
* There aren't any sheeps in outer mongolia
* Verminator

Happy listening!

The new version of the Atari800MacX, the Atari 8-bit emulator for Mac OS X has
been released. This new version features a large number of changes and
improvements. Some of the major changes include the addition of a Media Window
showing the status of disk, cassette, and cartridge media, a built-in Disk
Image Editor, ability to drag and drop disk images, cartridge images, state
files into the emulator window, and much more. Please visit the Atari800MacX
page for complete details about what's new and to download the latest version
(source code is also available).

Fran?ois LE COAT annnounces:

The software"Eureka" is updated and released on its WEB page. It is a "2D Graph Describer and 3D Modeller". It is updated nearly every month, if I found significant improvements for it. You will have to fetch it at :

http://eureka.atari.org/eurka406.zip That is the Complete Common Edition

http://eureka.atari.org/eurka020.zip Is the Complete 68020 Edition

http://eureka.atari.org/eurkafpu.zip Is the Limited FPU Edition

http://eureka.atari.org/eurklite.zip Is the Lite Edition, working on early ST with 720kb floppy

http://eureka.atari.org/lib_dgem.zip Are Dynamic Libraries Extensions for Eureka

http://eureka.atari.org/tiny045.zip Is the OpenGL Extension (requires previous package)

The handling of OpenGL extension has been modified, rendering modes were added, the RAM usage is better handled. The program's resources have been optimized for a similar interface's look. Shortly, we do a better job without having to cope with a"fat program". That's what I like !...

I wish you big fun with all this new STuff !

Hi folks, a new version of Atari++, the C++ based Atari 8 bit emulator
for Linux and win32 is available for download at:

http://www.math.tu-berlin.de/~thor/atari++/

This release improves both, emulation quality, and stability. The
1.33 had two major bugs that could crash the emulation, one in the
file requester due to a buffer overrun, and another in the sound
emulation startup. Both were fixed. The 1.35 release also improves
audio emulation for the 16 bit counters were the emulation of the low-part
of the counter was just plain wrong. This helps for emulation of a couple
of Basic type-in listings and special sound effects used there. I also
improved the scanline/DLI emulation timing that was off by one cycle in
1.33 and did not emulate a special feature of Antic if a DLI is delayed
due to a WSYNC.

Also new: A new release of the Atari emulation Os, os++, to be found on
the same URL. This release improves emulation of the character editor
device, E: whose backspace handling was a bit broken if the cursor
position was poke'd to.

Full Release History:

```
        - Fixed a segfault in the file/directory requester due to a
     buffer overrun when extracting the file or path-part of the
     selected path.
        - Pokey emulation of the low-part of 16 bit counters was incorrect
     up to this release. This fixes sound effects of various Basic
     type-in listings.
        - Added finer Pokey volume control.
        - Added emulation of Pokey nonlinearities.
        - Antic DLI timing was partially incorrect, the DLI signal was
     generated one cycle too late with DMA registers sampled
     too early. Users of earlier releases should adjust their
          preferences and set the "BeforeDLIClocks" to eleven (11)
     instead of twelve.
        - Added emulation of Antic DLI behaviour if the CPU is stopped.
```

ANTIC does not generate an NMI signal immediately, but waits
again for the next possible NMI generation slot in its
horizontal scanline.
- Fixed the behaviour of the backspace key/control code in
the E: handler of the built-in Os emulation. This fixes a
couple of Basic games.
- Fixed a critical bug in the Pokey emulation that could have
caused crashes on startup due to non-initialized variables.

Have fun,

Thomas

At last, there is a new release of AtarICQ available! Since the last version
was uploaded, many things have happened that made this one get delayed over
and over: I got a CT60, which I needed time to install and setup properly.
Furthermore, I shortly after experienced a serious harddisk crash which took
quite some time to recover fully from. Anyway, things are slowly getting back
to normal again now :)

In AtarICQ 0.160, you should not expect any major changes. Instead, there are
some important bugfixes present and even the overlay has been updated again.
Here is a brief list of the most important additions and changes:

No hardcoded limit for the number of contacts you can add! The internal
arrays can be adjusted dynamically on the fly now! (Big thanks to Lp for
sharing the GFA info!)

Configuration for sound has been bug fixed and should be much better now

The OVL has had another update, so now aICQ can talk to eg. Trillian and

GAIM. Furthermore, some problems with receiving ICQ messages of certain
lengths (at least that is what seemed to be the problem) has been fixed.

A problem with reading registration data from file has been cured

Fixed a problem where sometimes the wrong window was given \\\"focus\\\"

XBIOS sound should work on Falcons now (Big thanks goes to Deun!)

As usual, you can read more and download the program here: www.ataricq.org

Didier M[illegible]quignon has released a new version of the CT60 Flash/TOS/Firmware.

This update is particulary important for people with a CT60 of the latest
model, as there has been a change of the flash device in many of the new
cards. A 32MHz external videl-sync problem has also been corrected.

New features in AtariSIO 0.30-pre1 are:

- atariserver now comes with a completely new curses frontend
- the kernel driver is compatible with 2.6.x kernels
- added preliminary support for the ATP format
- lots of other smaller fixes and improvements

AtariSIO can be downloaded from my homepage:

http://www.horus.com/~hias/atari/

so long,

Hias

In the initial release of COPS sources, there was an entire directory missing.
Those missing files are now available for download on TOPP. (Thanks to Sascha
and Wilfried!) But that is not all: Recently, FreeMiNT maintainer Frank
Naumann has put some efforts into adapting the COPS sources to be compatible
to GCC and has now succeded in compiling stable and useable binaries! Knowing
that, it might not come as a shock to find out that the sources has been added

to the FreeMiNT CVS and can now be maintained by MiNT developers. In other words: -COPS is back! :)

Over to NEWSie. As the previously released sources to v0.96 was not the most recent ones, John has now sent us the files for the 0.961 version. NEWSie still has no new maintainer, but GFA guru Lonny Pursell has set out to squash a few of the most infamous NEWSie bugs in the near future.

Both applications are released under GPL.

Tree Wave, a two piece band from Texas that makes pop songs using obsolete
computer and video game equipment as instruments, has released their first
music CD, Cabana EP+. Paul Slocum, creator of the Atari 2600 Synthcart and
Testcart, codes the music primarily on an Atari 2600, Commodore 64, Compaq
286, and Epson dot matrix printer, and Lauren Gray adds lush vocals. You can
listen to two of the Cabana EP+ tracks as well as purchase the CD in the
AtariAge Store (www.atariage.com/store), and can visit the Tree Wave web site
(treewave.com) to learn more about the band.

Rob Perry has announced:

GamebaseST v0.2 is a database of 230 Atari ST games, including screenshots, manuals, hints, cheats etc, and it also doubles as a front-end for STeem and SainT emulators.

The Gamebase front-end (www.bu22.com) is gaining more and more popularity with emulator users as it can support almost all emulators running on the Windows platform. It already has a 15000+ game database for the C64 platform, and other databases include Spectrum, Super NES and Amiga.

The Atari ST version boasts the best support for the built-in GEMUS scripting language so far, enabling the database to launch STeem automatically with optimum settings for each game (TOS/memory/harddisk/joystick/midi etc). Now most of the hard work is done preparing the database, the GBST team can now STeem (ahem) ahead to reach the 1000 game target which will signify the v1.0 release.

An ST Demo version of the database is also in the making (DemobaseST)

Anders Eriksson has announced:

One of the better video players for Linux called MPlayer has been ported to Atari SDL. The port is made by Didier M[illegible]quignon, known for Aniplayer and his CT60 FlashROM and utilities. With MPlayer we can now read datas off DVD's (not yet encryped DVD's, an Extendos upgrade is needed and planned to take care of that).

The system requirements are hefty to say the least; 100MHz CT60 is a minimum spec machine to handle this :)

The application works together with (Free)MiNT and MagiC in a GEM-window or fullscreen mode.

Anders Eriksson has announced:

Gildor, who brought you the Yeti3D engine port to Atari continues his porting frenezy. We've gotten no less than four complete games ported from other platforms to the Atari. Ok ok, which ones? Here goes..

* Wolfenstein 3D

Ported from the orginal, so everything's there as it should be. Demo levels included in the archive.

* Spear of Destiny

A Wolfenstein 3D spin-off, very similar but differnt levels and some new stuff (textures with transparency for instance).

* LTris

Well the name says it all really. You need a 25MHz bus for this one, or a SuperVidel; it needs 640x480 16bit hicolour graphics.

* Moonlander

A remake of an old Atari classic game. This one also needs 25MHz bus or a SuperVidel, same reasons as above.

* Yeti3D

Well as a little bonus, an updated version of the Yeti3D engine, now with better lowres mode (centered graphics etc).

These portings are all using the latest SDL versions, so they should be using the fast C2P routines from Mikael Kalms/TBL. Gildor also tells us that the games runs _much_ better in MiNT than TOS (MagiC untested).

Wolfenstein 3D: http://files.dhs.nu/files_game/wolf3d.zip
Spear of Destiny: http://files.dhs.nu/files_game/spear.zip
Moonlander: http://files.dhs.nu/files_game/lander.zip
LTris: http://files.dhs.nu/files_game/ltris.zip
Yeti3D: http://files.dhs.nu/files_game/yeti3d.zip

Anders Eriksson has announced:

I just want to let you know that the MiNT kernel runs
now also on the Coldfire. I wrote a detailed description
of how I ported the kernel to this platform. You can read
it at:

http://acp.atari.org/articles/mcf5407eval/mcf5407eval.html

There is also a summary about the TOS-dependencies of
MiNT (at least the needed things for the startup),
I stumbled across.

All in all, I must say that I liked the fact that MiNT
leaves the hardware initialization for timers, keyboard etc.
to TOS. This enabled me to perform these initializations
in a Coldfire-specific way in advance and then calling
the MiNT kernel. (very much like a PC BIOS, that sets
the system to a well defined state)

Frank told me that he wants to make MiNT take over
the whole system and kick out all dependencies to the
underlying TOS. This means, to include all drivers
that are needed for MiNT's startup (keyboard, screen,
timers etc.) into the MiNT kernel.
I would like to keep MiNT behaving like it does now.
The great advantage for now is, that MiNT makes no
assumptions about any devices except the CPU.

My current execution environment for the MiNT kernel is
very small (ca. 600 lines of code). It supports character
output and keyboard input (over a serial connection).
There is no block device support yet.

Thank you all for your great achievements with MiNT!

Greetings,
Norman

Another update to the famous 8-bit music collection called Atari SAP Music
Archive has been released. It adds 70 new songs and now the whole collection
has exceeded 10 MBytes! Get 1840 POKEY tunes and players at the ASMA homepage.

The multitasking AES for (Free)MiNT called MyAES has been upgraded with new features.

Highlights from the new release includes:

* 256-colour icon support
* Loadable keymaps (compatible with MagiC)
* Window resize from all window borders
* Real-time scrolling

Fran[illegible]ois LE COAT has annnounced:

The software "Eureka" is updated and released on its WEB page. It is a
"2D Graph Describer and 3D Modeller". It is updated nearly every month,
if I found significant improvements for it. You will have to fetch it at:

http://eureka.atari.org/eurka408.zip That is the Complete Common Edition

http://eureka.atari.org/eurka020.zip Is the Complete 68020 Edition

http://eureka.atari.org/eurkafpu.zip Is the Limited FPU Edition

http://eureka.atari.org/eurklite.zip Is the Lite Edition, working on early ST with
720kb floppy

http://eureka.atari.org/lib_dgem.zip Are Dynamic Libraries Extensions for Eureka

http://eureka.atari.org/tiny045.zip Is the OpenGL Extension (requires previous package)

There have been improvements done in the generation of metafiles (*.GEM) with SpeedoGDOS or NVDI. Bug tracking and optimizations. Those modifications are mostly inspired by the apparition of MyAeS (http://myaes.free.fr).

I wish you big fun with all this new STuff !

Czuba-Tech annouced a couple of days ago that they have a finished design for a a combined network and USB card for Falcon expansion bus and TT/MSTe VME ports.

Users of CT60 are directed to the EtherNAT project which has the same

type of components, but using the (faster) CT60 bus.

Czuba-Tech is now taking orders, and if enough of them are met, the
production will begin.

http://www.rtdos.com/retro_ss.zip

its not much (only first version) but its a start (at least as a
conversation piece). looking to add more screen shots (if anyone wants
to
contribute, I and the retro community would greatly appreciate it I'm
sure)....or maybe someone can help me complete my M.E.S.S. bios rom list
(where i got most of the screen shots) so that I can work on getting more
screen shots of boot screens (see one of my earlier posts).

next version will include the specific systems where each screen shot is
from (this one was just for starters).

comments ? contributions ?

BigNick0 has announced:

I guess this one slipped through the cracks... Here you have it from
versions.txt:

1.70b

* Stupid MFP writing wrong bus error fix. some demos could have crashed
in previous version (1.70)

1.70

* MFP emulation core totally re-written ! Now support cycle accurate
reading (Overscan Demos by Paulo Simoes)

* "Line disabling" technic emulated (Overscan demos by Paulo Simoes)

* "StopLine" fixed (B.I.G demo by TEX low border fixed)

* Fixed STE DAC monos sound bug (quality improved !, try BrainDamage
Demo sound!)

* SainT does not take 99% of CPU when running in background in windowed
mode.

* Fixed cycle timing when reading in FC00 (thanks to Paulo Simoes)

* Low border adds now 45 graphics lines instead of 43

Version 0.50 of the Atari ST emulator Hatari for Linux and other systems
has been released.

Release notes for this version:

- A lot of internal code cleanup and bug fixes.

- Added a dialog for creating new blank floppy disk images.

- The source code has been optimized for better emulation speed.

- Hatari now supports RS232 emulation.

- Some bugs in the 68000 emulation have been fixed.

- The emulator now checks for double bus errors and stops the emulation
if necessary (instead of crashing the emulator).

- Timer-D is now patched correctly again.

- The old font has been replaced by two new fonts so that the GUI now
looks better in high resolutions.

- The fonts are now linked into the executable.

- Added support for DIM floppy disk images.

Anders Eriksson has announced:

For the CT60-users out there:

I just released a small utility that can replace the startup-picture on
CT60 machines.

All you need is an original ct60tos.img and a valid Targa file. It's
tested on the latest CT60 flash with good result.

Matthias Arndt has announced:

I started a small tutorial project by providing a GFABASIC tutorial. It will
teach how to use GFABASIC and its compiler, how to code in general, about
loops, control flow, program structure and probably graphics.

It is work in progress. Expect it to grow. Addititions will be chapterwise and

probably open for download later on.

Hi folks !

Euro Jag Fest 2004 will take place on 23rd october 2004.
It's THE event for all Atari Jaguar/Lynx fans, developers and retailers
of europe...
Many well known people already promised to attend and many new
developments will be presented.

You won't want to miss it. Check out the official website:
http://www.e-jagfest.de

Regards, Lars.

Didier M□quignon has released v1.02 of the CT60 flash TOS/BIOS.

Improvements include:

- New boot features:

* Add identify device procedure for SCSI and IDE drives, the boot wait if a removable drive is not ready.

* Add IDE slave support (device 17).

* Add CompactFlash support.

* Add combined MSDOS/TOS root and partition support, this feature support byte swapping needed by MSDOS format and search a *.SYS for load the disk driver.

* Add speed test for bootables devices.

- Check and fix modecode get from NVM.

- 4 choices inside the boot order (SCSI and IDE).

Changes in RMT 1.17

- Menu Track:
* Load and paste to actual track.
* Save actual track as...
* Clear all duplicated tracks, adjust song.
(Note: This function is also included in Song - All size optimizations.)
- New block effect/tool (menu Block - Effect/tools or Ctrl+F
or toolbar button "FX") function: "Modify notes, instruments and volumes".
- Function "Song - Prepare song line with unused empty tracks (Ctrl+P)"
was changed to "Song - Insert new line with unused empty tracks (Ctrl+P)"
and now it insert this new songline into actual song line positions,
not to line below.
- Function "Song - Prepare duplicated song line (Ctrl+O)"
was changed to "Song - Insert copy or clone of song line(s) (Ctrl+O)".
and now it shows new copy/clone dialog for setting of parameters
for this very helpful function.
- Menu Song:
* Put new empty unused track to actual song position (Ctrl+N).
- "File - Export as XEX Atari executable msx" there is possible to:
* define 4+1 lines now. 5th line is showed instead of 4th line
if Atari SHIFT key is pressed.
* define color of rasterline meter.
- "File - Export as SAP file" there is possible to define hexadecimal song
line
numbers for more SAP module subsongs. Initial values are prepared by automatic
subsong-detection algorithm, but you can change it at pleasure.
- Added "*.tm8" extension in Import TMC open file dialog.
- New option in Config dialog (menu View - Configuration):
* F1-F8 keyboard layout:
- RMT original keyboard layout.
- Layout 2:
F1=track edit,F2=instrument edit,F3=info edit,F4=song edit
F5=Play,F6=Play from start,Ctrl+F7=Play tracks,F7=Replay tracks,F8=Stop
(This layout is for F5-F8 keys identical with some other renowned
module tracker programs.)

Accessories
- Atari RMT player RMTPL104.XEX (new version 1.04) is in "player" directory.
(There is short description in RMTPL104.TXT file.)

New songs
- Song "hexxagon.rmt" (Hexxagon music & sfx, raster/c.p.u., 2003)
Song "basix.rmt" (Basix, by raster/c.p.u. 2004)
Song "gemx.rmt" (Gem'x song, Atari version by raster/c.p.u. 2004)
in "songs" directory.
(SAP file "hexxagon.sap" with 6 subsongs is in "exports/sap" directory.)
(SAP file "basix.sap" with 9 subsongs is in "exports/sap" directory.)

Bug fixes
- Revision of keyboard control.
NumLock mode is turned off all the time when tracker main window is active,
so that key combinations Shift+NumBlockKeys are working as well as state
of right Shift key can be correctly detected now.
- Internal improvement of TMC import algorithm (better recognition of
identical
tracks arised from other tracks by song shift parameter).
- If tracker window isn't active, MIDI events on channel 0 are ignored.
- Other small corrections and bugfixes.

Enjoy it!

Greetings, raster/c.p.u.

Sergio Arriaza has announced:

Check out this new version of Atariware.

 3.800 Atari Games with a search engine.

 A big pack with classic and creative demos in executable format.

 Tips for the Atari800Win Plus emulator, how to get infinite lives and play
over internet.

 An strategical guide for the classic "ARCHON", and much more.

The only contra... site is still in spanish.

 Greets from Chile to all Atari 8 bits fans.

Anders Eriksson has announced:

I'm proud to announce the FreeMiNT 1.16.1 eta release. I'm thankful to all
people that worked or helped on the development and all people that still use
FreeMiNT.

This beta release is a bugfix release compared to the 1.16.0 beta release.

It include lot of bugfixes in the kernel and XaAES as result of the bugreports
and feedback of the 1.16.0 beta release.

The official download URL is:

http://sparemint.atariforge.net/sparemint/mint/kernel/1.16.1/

As you may already know, XaAES is now part of FreeMiNT. This FreeMiNT beta
release include the XaAES beta version 0.992. There are significant
enhancements in stability, compatibilty and speed due to the great work of Odd
Skancke.

Florent LAFABRIE has announced:

New version after a large work (1 year) of research of bugs and insertion of innovations. The treatment can be 70% faster with Magic PC and faster 50% with the CT60. The program is free, but it is necessary to ask me for a code of activation. For those which do not know it yet, Icon Extract extracts the icons colors (from 1 to 32 bits) from files ICO, CUR, ANI, ICL, DLL and XPM to safeguard them with format RSC (for Interface or Ressource Master).

Minimum: TT or Falcon + accelerating card or PC with Magic PC. The program is developed on Falcon 030 + CT60 100 MHz + 256 Mo of SDRAM

The program and the list of the innovations are in French. Afflicted, but I do not have enough time for all to translate. Good loading,

Florent

Hello,

Steem v3.2 has finally been released. There are quite a few bug fixes
plus great new features:

Emulation Bugs

Rewrote DMA sound again (Badger Demo and lots of other STE programs).
Fixed some CPU bugs (Wrath of the Demon, Zoolook).
Fixed read-only disk image read sector bug (thanks Jorge).
Fixed big frame bug (War Heli, thanks Jorge again).
Fixed byte palette bug (lots of mono programs).
Fixed current time seconds bug.
Fixed FDC bug (Chaos Strikes Back Replicants crack).
Fixed FDC IO access bug (White Spirit Demo).
Allowed programs to set the time/date (Sewer doc displayer).
Lots and lots of other stuff (cheers Jorge).

Other Bugs

Made Steem work again on Windows 95.
Fixed multiple save over last snapshot undo bug.
XSteem: Improved non-English keyboard mappings.

New Features

Pasti copy-protected disk image library support (Pasti library will be
released soon).
Disk image database: easy detection of the contents of disk images
(thanks to Keili for all his work).
Vastly improved VSync.
Undo last reset and undo last load snapshot options.
XSteem: More features in disk manager.
XSteem: Web links have returned (and they work now).
XSteem: Added RtAudio library sound.
Debug: Lots of stuff.

The new version is available from the download page:

http://steem.atari.st/download.htm

Also make sure you download the disk image database to enable some of
the new features:
http://steem.atari.st/database.htm

Steem website:
http://steem.atari.st

Hi folks,

a new release of the C++ based atari 8-bit emulator is ready
for download at its usual URL at:

http://www.math.tu-berlin.de/~thor/atari++/

What's new in this release: Not much visible, but quite
something changed. The most notably change is that it compiles
now fine on FreeBSD and on 64 bit platforms. I especially want
to thank Alexander M�ller for helping me to get the 64 bit
port ready, this release is mainly due to him.

Despite some "timing fixes", the floppy emulation contains
now some undocumented diagnostic commands of the 1050.

   - Fixed the SetIRQ service routine of the built-in Os.
        - Fixed (again) the Antic NMI/DLI generation.
        - Fixed CPU handling of the WSYNC register (broke Atlantis)
        - Fixed the keyboard handler of the 5200 emulation which
          did not generate the up/down bits properly.
        - Fixed the light pen code generation.
        - Fixed parts of the 65C02 emulation, zero page access was
          not extending properly to page 1.
        - Fixed a lot of compilation problems on 64 bit architectures,
          special thanks goes to Alexander M�ller for helping me to
          hunt down these bugs.

- Fixed the SDL detection in configure.
- Fixed the player generation logic again a bit, did not
  support horizontal player splitting quite as it should.
- Improved the emulator handling of warnings, you can now
  go back to the menu.
- Added emulation of 1050 internal diagnostic commands.
- Fixed SIO return codes for SIO bypass routines.

So long,
   Thomas

"TRON" is a little 2-player game I wrote 20 years ago. This year, 2005,
it has been published on cartridge by Video 61.

The package comes in a box that includes the cartridge with a nice label,
along with an instructions sheet. (I wrote the instructions earlier this
year.)

The game itself is a very simple programming effort, yet I still think
it's
quite fun. A classic genre.

Requires: a 48K 800/XL/XE computer and 2 joysticks.

Simon Sunnyboy / Paradize has announced:

The Desktop Configurator has been released.

A small utility which allows you to select one of up to 10 individual
DESKTOP.INF (or NEWDESK.INF) files from the AUTO folder of your harddisc
so you can boot into a customtailored desktop, e.q. one for games, one
for coding, one for tools,etc..

Check http://paradize.atari.org/

This tool only manages selection of the DESKTOP.INF and nothing more.

Most AUTO folder and DESKTOP.INF management tools offered too many
unneeded features for me so I wrote this one. If it is of any use, feel
free.

Version 3.70 of Tera Desktop (TeraDesk) open-source desktop is available
at:

      http://solair.eunet.yu/~vdjole/teradesk.htm

TeraDesk is currently the only open-souce desktop available for 16-bit
and 32-bit Atari computers. Developer's goal is to maintain TeraDesk as
a small, simple, fast and reliable desktop, which can run on any TOS-
compatible Atari computer, clone or emulator and which can be be
functional
and competetive in the modern multitasking environments and all flavours
and versions of TOS-compatible operating system(s), while keeping, as
much as reasonable, familiarity with the original TOS desktop.

Several new features have been added since the last published version,
some
of which have often been asked for by the users (e.g. the
'autoselector').
Also, a number of bugs has been fixed.

Users are advised to read the documentation before running the program ;)
Some features of TeraDesk may not be immediately obvious.

Have fun.

Hi all,

I have translated my article that describes how to fit a PAK 68/3 into a
STacy. I hope you english speaking people will understand it. Please
inform me if something is wrong.

URL see below

Accessor of older transfer utility TURGEN released.

New features: * Rewritten to Java

* Direct output to sound card

* Better user interface

Data transfer from PC to 8-bit ATARI. It creates a Turbo 2000 sound
record from file located on PC and sends it to WAVE audio file or
directly to the sound card.

This utility can also convert some multi-section executable
files to single-section ones.

Anders Eriksson has announced:

Twenty years after the release of the Atari ST, the atari demoscene
proudly announces the release of the '20 years' megademo. Combined with
the demo release, the pictures, songs and demoscreens are competing for
fine prizes. Please give your support by voting.

The demo includes twenty screens, filling up two 820k floppy disks. We

also support harddisk users for a more comfortable way of watching the
demo. For Falcon and TT users there are less to chose from, we recomend
that you use an ST or STe instead for the full deal. Before you start
the demo, please read the included info file, especially the BUGS
section.

Thanks to everyone who has participated - sixty people in total! See you
in the 30th anniversary mega demo!

Harddisk version:

http://files.dhs.nu/compo/2005/hd_20yrs.zip

Floppydisk version:

http://files.dhs.nu/compo/2005/fl_20yrs.zip

Votesheet:

http://files.dhs.nu/compo/2005/vote2005.txt

GokMasE has announced:

The holidays are coming at an end, and just in time for the new year we
now bring you a new version of AtarICQ! Lots of things have changed, and
even though most of them have been invisible there will also be more
appearant changes for you to explore.

For those of you who have upgraded to a recent version of XaAES, you
will now find that aICQ supports its excellent keyboard navigation
scheme. That is, via TAB and ARROW keys you will be able to navigate
through the GEM dialogs of all programs that handles this properly.

Secondly, we are excited to present the first implementation of support
for the AOL instant messenger protocol in AtarICQ. The support is still
being worked on, but we consider things to already be working well
enough to be highly useable.

Here is a screenshot that gives you an idea what it feels like to mix
ICQ and AIM contacts:

http://www.ataricq.org/ataricq/20051206_AtarICQ-2.png

Add to this a substantial list of bugfixes and other improvements, and
you find yourself with well enough reasons to upgrade :)

Read more and download the new release on the AtarICQ webpage.

Happy new year!

Lonny Pursell has announced:

Also just in time for the new year.

- gui library completely reworked for XaAes keyboard navigation
- nearly all dialogs updated with newer object types
  (these objects require N.Aes, XaAes, or MagiC or compatible AES)
- new option to redirect /whois output to the console tab
- 2 minor bugs fixed

Have a safe and wonderful New Year Atari users. ;-)

Miro Kropacek has announced:

I wish you merry (post-)christmas time. We've got great news for you,
there's new audio media player! It's not just some simple replay routine
but full-featured player comparable to famous XMMS or Winamp. And for
your Atari!

Main features:
- modern user interface
- fully skinable GUI
- compatible from the simple TOS to the latest XaAES
- best d&d / va-start / long name support you've ever seen
- memory protection friendly
- multitasking support, windowed dialogs
- universal plugin API which allows you to take any kind of replay
routine and to adapt it to mxPlay
- it's free!
- open development, anyone can contribute / bugfix
- recursive directory/file adding with autodetection for supported
formats
- and a lot of more ...

You can download it from sourceforge.net area (follow link below) or
take a look at http://atari.sk. Some "normal" home page is on the way,
we're really busy so be patient... after this step will atari.org
registration follow. Just for your information, the homepage will be at
mxplay.sourceforge.net and mxplay.atari.org, respectively.

Once again, all the best and w're looking for your comments!

Greetings,

Miro Kropacek, mxPlay maintainer

Raster Music Tracker - new version RMT 1.22 is out.

Changes in RMT 1.22:

- Block effect/tool "Volume humanize" improved - better random values.
;-)

- New block effect/tool (menu Block - Effect/tools or Ctrl+F
  or toolbar button"FX") function: "Volume set/remove".
  It allows to set volumes or remove whole note events
  according to the current volume values.

- New function in Song menu:

  * Make track's duplicate and put it to actual song pos. (Ctrl+M)
    (It also check if track is used more times in song. If doesn't,
message box with question appears.)

RMT routine changes

- Several improvements of RMT Atari assembler routine - it is 5 bytes
shorter now and save some a few CPU cycles.

- New speed/size optimalization options FEAT_INSTRSPEED (it can save up
to 21 bytes and some CPU cycles) and FEAT_CONSTANTSPEED (it can save 28
bytes and some CPU cycles).

  (Coders, you have to use new rmtplayr.a65 and rmt_feat.a65)

gRzEnIu has announced:

Grzegorz Tomasz Stanczyk aka gRzEnIu has released a STYMulator.
STYMulator is a new chip music player for GNU/Linux. It's based on
ST-Sound GPL Library so supports YM music format dumped from ATARI
16-bit machines.

After some delay, new version of Graoumf Tracker is released! Main
feature in v0.8890 is 060 compatiblity. Background to GEM is also
slightly improved, but it still make some problems in MiNT, while it
works perfectly in TOS. Following fixed GT2 replay, there are also new
versions of puzzle game Capy and GemGT2 player. All applications require
Falcon030 computer.

After many days of listening, checking, adding songs and removing the
bad ones the new ASMA is out!

It contains 2006 tunes for New Year 2006. 128 new tunes, many better
rips and credit fixes. Big thanks must go to Miker, Fox, and Raster.

ASMA is the biggest and only archive of Atari 800-series songs.

Enjoy the listening!

AtariMagazines.com has added the full text of 16 issues of Compute!
magazine:

January 1982, April 1982, May 1983, July 1983, April 1984, May 1984,
June 1984, July 1984, August 1984, September 1984, October 1984,
November 1984, January 1985, June 1985, December 1985, and December
1989.

In addition, we've added an RSS feed that tracks the latest happenings
at the AtariMagazines.com What's New Page: http://www.atarimagazines.com/new.rss

Enjoy!
Kevin

MPC STiK is a network bridge for STiK API network clients under MagicPC.
Run Highwire, Chat in AtarIcq or AtarIRC all while running MagicPC. The
program uses the underlying windows network for all communications.

The website isn't beautiful, but I have included a short list of tested
clients. Some clients are problematic, but enough functionality is
there for regular use.

Recently there have been some serious problems with a couple of ICQ
clients, aICQ being one of them. The problem has been that incoming
messages have not been received properly. It would have seemed like all
your friends were silent all the time. Thanks to some fast research by
Dan, there is now an update which should take care of this issue. If you
use AtarICQ, make sure to grab this update ASAP!

Other noticeable changes in the new release:

    * Cleaned up the keyboard evaluation code

    * Masked out all messages about oncoming contacts during the first
10s. (Some ppl reported server was lagging this data a bit, hence this
delay was added in order to avoid unnecessary console text)

    * Some ICQ (spam) bots are trying to trick ppl to add them to
contact list by sending out signal that "user is online". That ould
indicate that we have already added them to your contact list,
something that is not necessarily true. Since aICQ now supports the
server side list directly, some of these attempts will now be detected
and blocked.

    * If contact list was empty, the option to "hide separators" ould
crash aICQ. Solved by temporarily cancelling the hiding, until contacts
are added.

    * In dialog for adding more contacts, the number of allowed chars
for UIN/ screenname has been increased from 10 to 16.

    * In MagiC, setting both SELECTEABLE and TOUCHEXIT for an object
will make form_button() wait for the mouse button to be released. This
is now worked around, allowing the setting of auto-away time in
preferences to work smoother under MagiC.

Eric has released version 2.0 of Dis6502 at

http://sourceforge.net/project/showfiles.php?group_id=145747

New features:
- DIS6502.exe can be run with a filename as a parameter. The type of file
  is guessed from its size and its header.
- Dis6502 now supports read and write labels for memory locations
- Dis6502 is now compatible with wine under Linux. You have to download
  the TrueType font file Atarcc__.ttf which contains a font called
  "Atari Classic Chunky". Copy this file in .wine/drive_c/windows/font.
  Download at http://www2.bitstream.net/~marksim/atarimac/acttfpc.zip

Fixed bugs:
- Merging contiguous segments could crash the application
- After disassembling, the disassembly window is synchronized with
  the bytes selected in the dump window.
- The small assembler does not accept illegal opcodes anymore to avoid
  generating $1A for NOP mnemonic
- Opcode $54 in Display List is now correct in disassembly listing.
- Dis6502.ini is now read from the installation directory, not from the
  current directory.

XSC v2.0, a musicplayer for Mac OS X that plays music from Atari ST and
Amiga.

New in version 2.0 is support for SNDH v2 (including recent maxYMiser
and Musicmon files) and a complete rewrite of the code (moved from Java
to Objective-C).

For the first time in four years, the SNDH music archive has been
upgraded.

It's more than an upgrade, in fact it's a remake from scratch. With 2246
SNDH-files with a total of 4783 tunes you have litterary several days of
non-stop chipmusic playing in front of you!

SNDH is a header/container format for Atari ST chipmusic used in games,
demos and so on. In this archive chances are very good that you'll find
your favourite Atari ST chipmusic. Players exist for many platforms,
including Atari ST itself.

http://www.crowcastle.net/preston/atari/

Initially released last fall, I've fixed some bugs, added some features,
and re-written some of the assembly code.

"Disk" is a BASIC and assembly program for all sorts of sector-I/O
operations. From simple sector editing to tracing the sector chain of a
file to creating an Autorun.sys file; it's all there in one convenient
program.

Electron has announced, that his work on new Atari invention: Video Board XE is to be finished soon. The idea is based on the GTIA replacement with a new chip. As a result we've got:

- GTIA compatibility - only old PMG and so called GTIA modes don't work.

- Sprite blitter with it's own 512 KB of RAM. It generates sprites with sizes from 1x1 to 256x256 points in the resolution of 320x192, each sprite in 256 colors. Number of sprites is limited only with blitter effectiveness, at least it wil be 30 pieces with 32x32 size and 256 colors per frame.

- Programmable priorities for sprites and background. Simple sprite collision detection.

- Programmable x and y sprite positions with 1 hi-res pixel presision.

- Two programmable 256 color palettes - one for the playfield and one for sprites. The palette colors are chosen from the 65536 colors (Hi-Color RGB).

- Playfield colors map in 8x8 and 4x4 pixels resolution, for each such block a 1 of 32 color-sets may be chosen (all playfield colors are changed), it is also possible to scroll color map vertically/horizontally with 1 pixel precision.

- Ability to mix hi-res and color modes with appropriate definitions in the map of colors..

- RGB output for monitor/TV.

We may see as far: photo of the board in the compy and an example of the desplay screen. A discussion on the subject may be found in Polish AtariArea forum, or on English AtariAge forum. The cost of the parts is about 200-250 PLN (50-60).

One year of very hard work to release a new version of the audio editor
Studio Son. I have spent a big part of this year to improve the features
of this program. Mainly the optimization of the filtering process and
the addition of the resampling function.

Up to date, this version is only in French.

You can find 68030 and 68030+68882 versions in the archive:

http://doyeuxyvan.free.fr/studioson/std209b/STD209B.ZIP

A new set of binaries are yet again available, and this time the
appearance is in focus!

*The object renderer can now draw textured backgrounds in =>256 colour
modes. Textures can be applied to window widgets, menus/popup menus and
3d-objects.

*XaAES can now also draw nice gradients to provide some eye-candy to eg.
window title backgrounds and the likes.

*The way XaAES handles/arranges iconified windows has been improved a
lot and can also be configured in great detail

*As usual, a lot of fixes and adjustments where you'll for example might
notice that the taskmanager now can be accessed even when wind_update()
has been locked

+Loads or smaller fixes and adjustments. Have fun!

The software "Eureka" is updated and released on its WEB page. It is a
"2D Graph Describer and 3D Modeller". You will fetch it at :

http://eureka.atari.org/eurka604.zip That is the Complete Common Edition

http://eureka.atari.org/eurka020.zip Is the Complete 68020 Edition

http://eureka.atari.org/eurkafpu.zip Is the Limited FPU Edition

http://eureka.atari.org/eurklite.zip Is the Lite Edition, working on early ST with
720kb floppy

http://eureka.atari.org/lib_dgem.zip Are Dynamic Libraries Extensions for Eureka

http://eureka.atari.org/tiny045.zip Is the OpenGL Extension (requires previous
package)

What you can do with this release is browsing through 2D and 3D objects,
without any prior knowledge. That also makes 10 years that Eureka comes
on internet.

Hi folks,

please find a new release of the Atari++ emulator for Linux and win32
in its usual location, this time release 1.45:

http://www.math.tu-berlin.de/~thor/atari++/

This release is mainly a bug-fix release that addresses a couple
of problems that have been pending for quite a while. Most notably,
the release addresses incompatibilities to the latest GNU and
Microsoft compilers, fixes a couple of bugs in the H: handler
(append mode didn't work, binary load had problems) and in the
Os++ emulator Os, namely in the FMS. Then again, I had one bug
report concerning timing of the HSCROLL register (got fixed) and
another one concerning P/M DMA that is likely to be fixed now.
Thanks Sebastian for reporting these.

I think it is also time for another new "stable" release. Thus, if
you find any bugs in this one, I would be pleased to collect your
reports. Similarly, new feature requests are also welcome, but probably
won't make it until 1.50.

So long,
   Thomas

NNTP-Posting-Date: Fri, 21 Apr 2006 13:10:55 EDT
Organization: Cox Communications
Xref: g2news2.google.com comp.sys.atari.announce:39

Following the recent progress in XaAES, aICQ is now available in a new release where some things have been adjusted to work and look smoother together with XaAES. For example, aICQ is now rendered okay also when the AES draws textures as background on 3d-objects. In addition to this, the tabs has been equipped with a discrete 3d-look that should kick in if you run AtarICQ in >=256 colour mode.

Users with scrollwheel mice might be interested in knowing that aICQ now responds to WM_ARROWED, and also supports XaAES WHL_AROWWHEEL mode causing in which the AES sends extended WM_ARROWED messages to further optimise the scrolling.

In addition to the above, a couple of bugs has also been found and fixed. (For more details, see below)

To skip the details, and go to download site: http://www.ataricq.org

----- New in AtarICQ 0.168 ---

* aICQ's message window is now tweaked to look at its best when the dialog background is using a bitmap texture. As a result of this, the feature to configure the background fill colour from within the preferences has been removed. If you wish to tweak the background colour to a solid fill colour, you should however be able to do so using your favourite RSC-editor.

* Small adjustment made to popups, fixing appearance under latest XaAES.

* Scrolling behaviour changed slightly: When the slider is not located at its bottom position, the text will not scroll to bottom when new messages are coming in. If located at bottom => follow bottom.

* In addition to the above, aICQ will now need the slider to be located at its bottom position in order to consider messages to be read.

* The TABs in the message window are now equipped with a discrete 3D-look when your setup can use >=256 colours. The active tab will also be enlarged slightly to further allow you to distinguish it from the

unselected ones.

* AtarICQ will now redirect WM_ARROWED messages to the vertical sliders
in both contact list and message window. When a mouse scrollwheel is
rotated XaAES sends WM_ARROWED messages even to windows that don't have
a native slider. This means that at least under XaAES you can now use
your scrollwheel to scroll inside aICQ windows. AtarICQ also supports
XaAES extended scrollwheel messages, using the WHL_AROWWHEEL mode.

* A bug that would cause display problems in the text input field in the
message window has been fixed. It would only hit if the user had
installed a custom system font, which had different char width/height
than the original Atari font. Should be fixed now.

* Discovered a nasty bug that would cause very bad memory corruption
upon certain incoming messages. The reason was that certain clients are
using a single ascii-13 to indicate a rowbreak. Should be fixed now.

Have fun! :)

Since a couple of somewhat serious issues in latest alpha release has

been found, there is now an alpha update available for you to download.
It also has a couple of new additions. These are the most important
changes:

* Fixed bug causing COPS's CPX windows to disappear right after opening.

* New AES keyboard combo, CTRL+ALT+P, will restore palette to system
default in colour modes 256 or less.

* New AES keyboard combo, CTRL+ALT+D, make a snapshot (needs external
app, see readme.txt)

* Fixed a glitch where using CLOSER widget to close Taskmanager window
released all information it contained.

* Taskmanager showed selected entries as black text on black background
- fixed.

+even more fixes. See docs for details.

kRadD has announced:

At the ATARIADA last week I released Lua 5.0.2. I\'s a port of the
famous scripting language including interpreter and compiler binary. The
source is also available. The port was done using Pure C.

Lua will be the basis for my NonConForm Rapid Game Development library
for the Falcon. It worth to goole around to see what other projects did
using lua, to get a feeling what the language is good for.

Michael Bernstein has announced:

I have a small and simple editor for diskmages in the download section
of my homepage to allow editing of diskimages on Atari computers.

Version 2.2

No new features

Fixed bugs:
- recent files and recent workspaces did not work in 2.1. Fixed.
- Opcode $96 produced a bad disassembly.
- Version 2.1 did not work on Win98se.

Hi folks,

update time! A new stable release of the Atari++ emulator for Linux and
Win32 has been released. As usual, you'll find it here:

http://www.math.tu-berlin.de/~thor/atari++/

What's new this time:

Many thanks goes to Mark Keates for providing a really detailed
emulation of the AMD flash ROM chips, and thus for making Steve
Trucker's Flash Carts now really flash-able. The emulator is able
to save these carts back to disk as required.

Furthermore, creation of disk images has been simplified a bit. To
create an empty disk, just type in a non-existing file name, then format
this virtual floppy from the DOS of your choice (or the built-in one).

A couple of improvements have been made for the built-in FMS and Os.
For the former, Dos 2.5 directores can now be read fine, and the memory
requirements have been dropped considerably (MORE room for programs).
For the latter, text windows on Gr.9/10/11 have been improved and no
longer flicker during SIO operations.

A couple of other minor problems have been hopefully fixed, more`s in
the README.

So long,
   Thomas

"Immortal 3", a double CD album presenting more than 150 minutes of the
best game music arrangements from classic Atari ST/ Amiga games, is
released by producer Jan Zottmann. Most of the tracks have been arranged
by the original artists.

Jochen Hippel, known in the Atari scene as "Mad Max", presents a "Wings
of Death" medley with a playtime of nearly 8 minutes, based on the music
he did for Thalion's famous Atari ST/E shoot 'em up.

Besides, Jochen Hippel rearranged a track from Thalion's Amberstar. Ambermoon, Amberstar, "No Second Prize" and "Wings of Death" - all these Thalion games are featured on the "Immortal 3".

Other tunes making you turn up the volume of your cd-player are based on (but not limited to): Turrican II + III, Fire & Ice, Lotus 3, Speedball 2, Ghouls 'n Ghosts...and an orchestral interpretation of the Apidya main title.

"Immortal 3" is available from Synsoniq Records for 24,95 Euro. For a complete tracklist and ordering information visit the Synsoniq-homepage at

AtariMagazines.com has added the full text of 21 more issues of Compute! magazine: Fall 1979 (the first issue!), January 1981, February 1981, March 1981, April 1981, October 1981, December 1981, February 1982, June 1982, July 1982, October 1982, November 1982, January 1983, March 1983, June 1983, August 1983, September 1983, October 1983, September 1989, November 1990, and December 1990.

http://www.AtariMagazines.com/compute/

Published from 1979 through 1994, Compute! was a multiplatform computer
magazine covering Atari, Apple, Commodore, Texas Instruments,
Timex/Sinclair, and other early personal computers.

Founded in 1996, the Classic Computer Magazine Archive delivers
thousands of articles from Antic, STart, Creative _Computing, Compute!,
Compute II, Hi-Res, Creative Computing Video & Arcade Games Magazine,
and Tandy Whiz Kids comic books.

Mike Hill and Lonny Pursell have made available the source code to much
of the operating system of the Atari ST/STE/TT/Falcon line of computers.

The source code to the AES, VDI, AHDI, CPX's, Xcontrol, Neochrome and
more is available on Lonnies Atari Document Archive.

Hopefully this code can help Atari coders.

Be aware the file is big. About 34MB zipped.

Hi!

RUN!Only and RUN!Lib have been updated!

Most striking feature is probably the possibility to redim fields.

Apart from that lots of bugfxes and little improvements have been made.

More info on the RUN! Software homepage under "Produkte" and
"Service/Download"

http://www.run-software.de

The page is in German, but there are very comprehensive docs in the
archive in both, German and English! Please do read them!

Cheers, Ingo =;->

A commercial Advan BASIC programming language has been now re-released..
After over twenty years its author, William Graziano made it widely
available under the public domain license. The compiler, tools and full
documentation may be downloaded from the http://advan.oldos.net/ site. There is
also a competition announced for the best program
written in this great BASIC implementation (look at comp.sys.atari.8bit
posts).

K64 El proyecto, Online is a new Argentinian site dedicated to the
multiplatform magazine K64.

The magazine was published from 1984 thru 1989, and featured hard & soft
articles and program listings for all the home computers available in
Argentina at that time: Sinclair, Timex, TI-99/4a, Atari, MSX, &
Commodore.

Arnaud Carr 'Leonard' released STSound GPL v1.2 - YM format music
player for Win. Fixes and improvements:

- new low pass filter routine (faster and no more dynamic allocation),

- LZH depacking multi-thread safe,

- Rare bad division crash fixed. Thanks to Alexandru Simion,

- memory leak fixed with old format (YM2 and YM3). Thanks to Alexandru
Simion,

- GetInfo time reported in second and millisecond now,

- Both project files for VisualC++ 6 and .Net 2003.

Atari Sunday Chat
Sunday October 31, 2004
10:00 am - 1:00 pm
This event repeats every week.

Notes:
This is a chat room based on a web based client set around a good evening
time for European Atari users. Join us at
http://www.chat.playandview.com
Please use the Input-box in the left upper corner of the
PlayAndView-Chat-website enter your nickname and then use
the "Sign On"-button to enter the chatroom, there is no
registration necessary!
This starts at 10:00 am CST/16:00 UTC.

Version 4.01 of MyPicoDos is now available on my homepage

http://www.horus.com/~hias/atari/

MyPicoDos is a "gamedos" which supports loading BAS/BIN/COM/EXE files,
Dos 2.x/MyDOS disks with 720-65535 sectors in SD and DD and MyDOS
subdirectories.

New features in this version are:
- optional long filename display with integrated editor in the
  initializer program
- separate highspeed and standard SIO versions

- highspeed SIO is automatically disabled when loading a file
  from a "slow" drive
- automatical basic on/off switch (can be turned off by pressing
  "shift")
- support for BiboDos QD disks with 128 files
- completely rewrote loader programs to minimize memory usage
- new disk density recognition code fixes several compatibility
  problems eg with XF551
- lots of bugfixes and other improvements

so long,

Hias

A stupid bug sneaked into the 4.01 release of MyPicoDos: in the
standard SIO version, written by the initializer program, the
screen is corrupted and MyPicoDos is therefore quite unusable.
The highspeed version and the bootable ATR images are not affected
by this bug.

The new version 4.02, which fixes this issue, is now available
on my homepage

http://www.horus.com/~hias/atari/

so long & sorry for any inconvenience,

Hias

GokMasE has announced:

At last I got time to fix up documentation and stuff for the 0.161 release of AtarICQ! For those who don't know, AtarICQ is a GEM application that allows you to chat to your friends via the ICQ network. A STiK compatible internet connection is required and a 640x400 or better resolution is recommended.

In this new release you will find these most noticeable changes and additions:

* Possibility to set how long aICQ should wait until a message is considered to be read. AtarICQ will count the time from the moment that the user starts view a contact message with the message window topped! If you temporarily have another window topped, aICQ will reset the timer.

* Lots of general changes and additions to preferences for a change. Check them out, should hopefully be logical to figure stuff out. If not, have a look in the HYP.

* A _very_ nasty bug fixed, which would make AtarICQ crash upon certain AV-messages. Thanks to Martin Byttebier for patience during tests.

* Internal handling of contact data has been reworked, allowing for better flexibility which might prove important for future additions.

* The routine for unshading windows now uses WIND_SET(hdl&,22365,0,0,0,0) to allow it to work also with new XaAES.

* Fixed a problem where TT-RAM would (if present) was reserved for the DMA sound buffer.

PASTI
Atari ST Imaging and Preservation Tools

Pasti is a package of sotware tools for imaging and preservation of Atari
software. The two major components are the imaging tools and the emulation
helper tools. The imaging tools produce a disk image file from an original
disk. It works very similarly to standard imaging tools like Makedisk, but
they can image virtually any ST disk including copy protected disks. Imaging
tools are available for different hardware setups, including a plain Atari
ST computer. Capabilities vary depending on the hardware. Specialized
hardware is required for writing back images to a floppy disk.

SOFTWARE PRESERVATION

Our main goal is the preservation of Atari software in its original unmodified
form. Original software is normally stored on diskettes with custom format or
copy protection. Standard tools cannot back up or image them. But floppy disk
recording have a limited life time. It won't take too long until all original

Atari disks will be damaged and lost.

PASTI.DLL

Pasti.Dll is the emulation helper tool for Windows. It extends Atari ST emulators, adding support for extended disk images. These disk images support exotic, custom, and copy-protected formats. You can now use emulators to run ST software in its original uncracked form.

Nils Feske has announced:

A new site dedicated to Atari XL/XE machines recently opened. It features probably the hugest (and also very well sorted) archive of Atari 8-Bit games and demos! You can get there about 3.000 games and 1.500 demos including screenshots and information, which is just an incredible collection!

Foundation Two proudly released a Falcon 030 game called:

Ausbruch

The game was in the game compo at the outline party this year. After the party some bugs was fixed, and now the game is ready.

GokMasE has announced:

A new development snapshot release of FreeMiNT/XaAES has been made available
again, and this time you can expect a distribution mainly focusing on heavy
bugfixing. While this version appears to be a nice leap forward when it comes
to stability and accuracy, do keep in mind that it is alpha software!

That said, make sure to at the very least update both your kernel as well as
the xaloader, mouse driver and XaAES kernel module!

Paradox has just released a Chrismas demo for the Atari STE.

It also runs almost completly on Falcon030, only the last part messes up.

The demo is available on the dhs-site listed below.

Xref: g2news1.google.com comp.sys.atari.announce:60

GokMasE has announced:

After a period of quite some coding activity it is once again time for a new release of AtarICQ, this time in perfect timing for Christmas :)

This Christmas release holds quite a long list of improvements and changes, but to make it short I'll focus mainly on the most noticeable additions. On top of this list comes the fact that AtarICQ is now equipped with TABs. In case you don't know what TABs are, imagine a visual way of displaying that each conversation has a unique buffer display. With TABs you can easily switch to another conversation by either using keyboard or mouse. Along with this new feature you will find some new settings in a new section in preferences,"Msg window".

Another feature I have been wanting to explore for a good while is typing notification. This means that you can see when the person you are chatting to has started typing a new message. The new overlay now offers support for this feature and so far it seems to be working very well. You will see a dedicated

"Write Icon" in contact list as well as in open TABs whenever a contact has started writing to you.

Since last release AtarICQ is now also able to store unread messages to harddisk when terminated. This can be handy if you for example is hitting CTRL+Q to QUIT exactly when a new message is coming in. Or you may have received an incoming message without noticing! With the new feature added, aICQ will reload the unread message next time you go online.

As with any other release you can expect a good deal of smaller changes and bugfixes. For example, one very long lived and nasty bug has been cured. This particular bug would cause nasty crashes due to a failure in text parsing routines.

T. Huth has announced:

Version 0.60 of the Atari ST emulator Hatari has been released. It is mainly a bug-fix release, so there is not much new this time:

- Some code cleanup and bug fixes.

- The configuration file layout has changed a little bit (so you might have to check your settings in the GUI and to save the new configuration again).

- Window/fullscreen mode is now correctly initialized from the configuration file.

- Added --window command line option to force a start in window mode.

- Added alert boxes to show warnings, errors and information messages.

- PC mouse pointer is now better in sync with the ST mouse pointer.

- It's now possible to load an alternative cartridge image file.

I am sure that a lot of you Atari users once had an Atari 8-Bit computer back in the day. Maybe you still do. You might remember a classic game called M.U.L.E. A game that you wish would have been ported over to the PC but never was.

If you are a M.U.L.E. fan like I am, you probably used to have hordes of your friends over your house to play the best 4-man multi-player game ever written! After playing this game for hours upon hours, days upon days, years upon years, finally everyone grew up or grew apart and stopped getting together to play.

If you are a M.U.L.E. fan like I am, you probably have done a bit of M.U.L.E. re-searching on the internet, in hopes for one day someone to create an internet capable version of this great classic.

Well, I have some very good news for you. If you run Windows (98/XP) operating system, THE WAIT IS OVER!!!

Thanks to the authors of the Atari800WinPlus (http://atariarea.histeria.pl/PLus/index_us.htm) and Kaillera (www.kaillera.com), you can now play the greatest multiplayer game ever made with 4 players OVER THE INTERNET! This is not a clone, it is the ORIGINAL M.U.L.E. un-modified! Same graphics, same sound, same game! The only difference is that it looks a lot better on your computer than it did on your TV back in the day!

If this interests you, please hop on over to http://atarimule.neotechgaming.com where M.U.L.E. fans from around the world have been gathering and playing online!

Some of our members include the authors of the most popular M.U.L.E. web sites such as World of Mule (http://www.worldofmule.net/index.htm) and Extreme MULEing (http://mule.eichberger.net/index.php) and M.U.L.E. Fans (http://www.100hosting.com/mule/). Even the creator of the recent M.U.L.E. clone game Space HoRSE (www.gilligames.com) has joined up with us!

Ahh, the feeling of playing with 4 human players again is quite exhilirating! SO, what are you waiting for? Join us now!! http://atarimule.neotechgaming.com.

See you there!

Adam

Anders Eriksson has announced:

After a couple of years of talk and no action, Atari.Org has now published a
rather large (but yet far from complete) collection of Falcon demos and intros.

We're nowhere near a compelte collection yet, but the launch offers over
threehundred demos and intros to download.

Looking around the files, one will find many common demos from the well known
crews like Lazer, Avena and E.K.O. but also some lesser known ones. If you
look carefully you'll find a very rare Carebears demo which is a conversion of
their most famous Union demo screen - but in glorious Falcon overscan and with
a cool house soundtrack.

SainT 1.99b

* Upper border line counting in NTSC fixed ("Best Part Of The
Creation" by Delta Force)
* Medium resolution detection fixed for screenshot ("Best Part Of The
Creation" by Delta Force)
* Screenshot file name is derived from the floppy disk name
* BUS Error stack frame improved (Many original protections are
working such as PYM, SyntaxTerror, DarkSide)
* Crash recover (sometimes when SainT crash, you can't run it again.
Should be fixed now)
* Another upper border "60hz" fixed (multicolor music display by
Level16 in Syntax Terror)

Adam Klobukowski has announced:

I've just relessed port of REminiscence 0.1.2. It is a "Flashback" game
engine.

You need original game to play it.

It needs fast machine, accelerated Falcon (CT2b) should do.

Have trouble keeping up with the web's numerous classic video game and
classic computing news sites? Retro Roundup (http://www.retroroundup.com)
is a new site that serves as a one-stop source for classic computing and
retro video game news. Retro Roundup collects headlines from more than a
dozen sites, newsgroups, and other news sources into a single page,
including AtariAge and comp.sys.atari.announce.

You can customize the site: click Set As Favorite to move any site to
the top of the page, or Remove to hide a site's headlines from view.

Version 4.03 of MyPicoDos is now available on my homepage

http://www.horus.com/~hias/atari/

MyPicoDos is a "gamedos" which supports loading BAS/BIN/COM/EXE files,
Dos 2.x/MyDOS disks with 720-65535 sectors in SD and DD and MyDOS
subdirectories.

New features in this version are:
- files and directories can now be selected using a joystick in
  port 1 or 2
- fixed the initializer program so that MyPicoDos works with
  the KMK/JZ IDE interface

so long,

Hias

"The unforgiveable sins this earth must confront and overcome are
 Nationalism, capitalism, and hoarding. The idea of every nation
 should be forgot, price should be struck from the commons, and
 princes should be seen for the devils they are. The sins include
 our church, secret societies, and other religions which make of
 the spirit of God a divide."

Last rites declaration of Ioannes Paulus PP. II (Karol Wojtyla)
2nd April 2005

i. 45. "Nothing is more shameful than to affirm before knowing."

61Cicero, Disputationes Tusculanae, i. 25. "I have not shame, as they do, to admit that I know not what I do not know."

62Seneca, Epistles, lxxii. "It is easier not to begin....

63Lam. 3:1. "I am the man that hath seen."

64"What you seek without knowing, religion will announce to you." Pascal misquotes Acts 17:23. "Whom therefore ye ignorantly worship, him declare I unto you."

65Prov. 8:31. "And my delights were with the sons of men."

66Joel 2:28. "I will pour out my spirit upon all flesh."

67Ps. 82:6. "Ye are gods."

68Is. 40:6. "All flesh is grass."

69Ps. 49:12, 13. "He is like the beasts that perish; this their way is their folly."

70Eccles. 3:18. "I said in mine heart concerning the estate of the sons of men."

[71]1 Cor. 1:25 "The foolishness of God is wiser than men; and the weakness of God is stronger than men."

[72]Ovid, Metamorphoses, iii. "No one is happy before death."

[73]1 John 2:16.

74Cor. 1:31. "He that glorieth, let him glory in the Lord."

75John 14:6. "I am the way, the truth, and the life."

761 Cor. 6:17. "But he that is joined unto the Lord is one spirit."

77Gen. 4:7. "Unto thee shall be his desire."

78Office for Holy Saturday. "Which won for us a Saviour."

79Office for Good Friday. "Which won for us God's hallowed members to embrace."

80Hymn Vexilla regis. "Worthy God's hallowed members to

The software "Eureka" is updated and released on its WEB page.
It is a "2D Graph Describer and 3D Modeller". You will have to
fetch it at :

http://eureka.atari.org/eurka504.zip
That is the Complete Common Edition

http://eureka.atari.org/eurka020.zip
Is the Complete 68020 Edition

http://eureka.atari.org/eurkafpu.zip
Is the Limited FPU Edition

http://eureka.atari.org/eurklite.zip
Is the Lite Edition, working on early ST with 720kb floppy

http://eureka.atari.org/lib_dgem.zip
Are Dynamic Libraries Extensions for Eureka

http://eureka.atari.org/tiny045.zip
Is the OpenGL Extension (requires previous package)

This new release is built with GCC 3.3.3

Vasco/Tristesse has announced:

Are you ever wondered how the demos may look on Atari with 65c816
processor? Pasiu/SSG, which is developing the turbo card, has published
an AVI file with the Black intro by Charlie/AR, which run on such a
compy with 14 MHz clock. Next movies are planned. And here you may found
the original Black intro, which won the intro compo on Last Party'98.

Last rites declaration of Ioannes Paulus PP. II (Karol Wojtyla)
2nd April 2005

--
all is dead to
him. Hence it comes that each believes himself to be all in all to
everybody. We must not judge of nature by ourselves, but by it.

458. "All that is in the world is the lust of the flesh, or the lust of the eyes, or the pride of life; libido sentiendi, libido sciendi, libido dominandi."[73] Wretched is the cursed land which these three rivers of fire enflame rather than water! Happy they who, on these rivers, are not overwhelmed nor carried away, but are immovably fixed, not standing but seated on a low and secure base, whence they do not rise before the light, but, having rested in peace, stretch out their hands to Him, who must lift them up, and make them stand upright and firm in the porches of the holy Jerusalem! There pride can no longer assail them nor cast them down; and yet they weep, not to see all those perishable things swept away by the torrents, but at the remembrance of their loved country, the heavenly Jerusalem, which they remember without ceasing during their prolonged exile.

459. The rivers of Babylon rush and fall and sweep away.

O holy Zion, where all is firm and nothing falls!

We must sit upon the waters, not under them or in them, but on them; and not standing but seated; being seated to be humble, and being above them to be secure. But we shall stand in the porches of Jerusalem.

Let us see if this pleasure is stable or transitory; if it pass away, it is a river of Babylon.

460. The lust of the flesh, the lust of the eyes, pride, etc.--There are three orders of things: the flesh, the spirit, and the will. The carnal are the rich and kings; they have the body as their object. Inquirers and scientists; they have the mind as their object. The wise; they have righteousness as their object.

God must reign over all, and all men must be brought back

Time has come to release yet a new version of AtarICQ and as usual you can expect both a good amount of smaller fixes as well as some new additions.

The most appearant change is that you can now specify that aICQ sorts the contacts in your contact list in alphabetical order. Another visual change is the ability to remove the online/offline separators.

The routines dealing with buffering/logging of chat and system messages has been refined, curing a couple of glitches related to this. AtarICQ

users talking to people using some ICQ clones may also be happy to hear
that aICQ will now interpret also a single ascii-10 (lf) as a rowbreak.

Do give the new release a go, and don't hesitate to send feedback!

DOCs has announced:

After several years of absence, Studio Son, the sound samples editor for
Falcon, is back with the 2.08beta release (up to date, only in French).
The main improvement is the new function"Filtering..." which enables you
to produce FIR filters (Low Pass, High Pass, Band Pass and Band Reject
). This is carried out by the DSP 56001 and with Direct to disk process.

I must still work to add errors managements and other features, so
please wait...

This is a beta version, so be careful with your samples, do not totally
trust in this program. You must know I have not noticed any problems.

You can find 68030 and 68030+68882 versions in the archive.

Petr Stehlik has announced:

A new version of ARAnyM is available now for GNU/Linux, Mac OS X and MS
Windows. With full 68040 MMU support it is now more than suitable for
developing not only user but also system software (yes, FreeMiNT and
Linux/m68k are running happily on ARAnyM).

The full text of the classic book Artist and Computer is now available online at
     http://www.AtariArchives.org/artist/

Published in 1976 and edited by Ruth Leavitt, Artist and Computer profiles 35 pioneering computer artists. The book is still used as reference material in art classes around the world. "Leavitt's book, Artist and Computer, was an early example of computer artists building a framework into a new genre," according to Gary Svensson, PhD.

"No computer will ever take the place of an artist," reads the book's back cover. "But many artists are discovering computers as a new means of self-expression. Some use computers as a medium to create finished pieces of art, while others explore new art forms, using the computer as an idea machine."

It is the 31st classic computer book to be made available at www.AtariArchives.org.

***

Also, the full text of the classic book Compute!'s Second Book of Atari is available. Published in 1985, Compute!'s Second Book of Atari offers BASIC and assembly language programming techniques with an emphasis on high-resolution graphics.
     http://www.AtariArchives.org/c2ba/

***

In addition, a chapter from Atari In Action!, an unfinished, unpublished book about the Action! programming language, was recently made available.
     http://www.atariarchives.org/articles/

***

Finally, a new mailing list will send you e-mail alerts when new resources are added to AtariArchives.org and AtariMagazines.com. To subscribe to the low-volume, spam-free mailing list, go to
     http://www.atariarchives.org/new.php
and enter your e-mail address in the box.

"The unforgiveable sins this earth must confront and overcome are
 Nationalism, capitalism, and hoarding. The idea of every nation
 should be forgot, price should be struck from the commons, and
 princes should be seen for the devils they are. The sins include
 our church, secret societies, and other religions which make of
 the spirit of God a divide."

Last rites declaration of Ioannes Paulus PP. II (Karol Wojtyla)
2nd April 2005

think that for want of judgment, I take every religious pang, and enthusiastic conceit, for saving conversion. I do not much wonder if they should be apt to think so; and, for this reason, I have forborne to publish an account of this great work of God, though I have often been solicited. But having now a special call to give an account of it, upon mature consideration I thought it might not be beside my duty to declare this amazing work, as it appeared to me to be indeed divine, and to conceal no part of the glory of it; leaving it with God to take care of the credit of His own work, and running the venture of any censorious thoughts, which might be entertained of me to my disadvantage. That distant persons may be under as great advantage as may be to judge for themselves of this matter, I would be a little more large and particular.

SECTION II. The Manner of Conversion Various, Yet Bearing a Great Analogy.

I therefore proceed to give an account of the manner of persons being wrought upon; and here there is a vast variety, perhaps as manifold as the subjects of the operation; but yet in many things there is a great analogy in all.-Persons are first awakened with a sense of their miserable condition by nature, the danger they are in of perishing eternally, and that it is of great importance to them that they speedily esca

Zdenek Eisenhammer has announced:

A new version of the popular Atari XL/XE music collection has just been
released. It brings 69 new songs (so the total is 1900 POKEY tunes
now!), many credits fixes, bugfixed songs and removed duplicates.

GokMasE has announced:

A new development snapshot of XaAES has been made available on the
un-official XaAES page. More than anything, this update offers really
good stability. In addition to that, you could also expect:

* Scroll lists has been inplemented, used internally for eg. the XaAES
"about.." window as well as the file selector.

* File selector can now have "tree view" style. The contents of the
current dir can also be presented in real-time, as loaded.

* Menu bar handling has been bugfixed. Both a problem with a visual
glitch as well as a stability issue has been cured.

* Code to handle window widgets has been reworked, as has the window
manager. The latter has been prepared for possible future extensions
regarding appearance settings.

* Setting AES window borders to a value of >=4 will result in a 3d-style
border being drawn. Expect better configurability regarding these things
further down the road.

* Keyboard combos should work much more reliably now. Changes has been
made to both kernel and XaAES.

GokMasE has announced:

Following the alpha release of May 4th, we have now uploaded a new development snapshot that cures some of the problems that were present there. In addition to that, some other things were taken care of as well. This should be the most stable XaAES build this far!

Most significant changes:

Support for resource files that does not follow documentation, previously causing XaAES to not detect all CICONs at times. (zBench & rscview are two of them)

Update lock (aka screen lock) should not stop mouse-events (move/button) from being delivered. As a result of this XaAES is now a lot more responsive under such circumstances (most noticeably with AES-lupe)

Fixed a problem where wind_get(WF_TOP) would return the handle of the popup window during menu/popup navigation. This cures problems with Everest and ResourceMaster.

ARROW-up when at first entry will wrap to last entry, and ARROW-down when at last entry will wrap to first entry in the fileselector.

When typing in the inputfield and a partial/full match of a directory is indicated, entering this directory by pressing enter will now clear input filed. Allows for easier keyboard navigation. Need feedback on this issue!

Aniplayer 2.22 didn't respond to keypresses, should be okay now

Much better/stable menubar swapping

Much better/stable swapping of desktops

Check for, and attempt to remap, conflicting shortcuts in AES objects
loaded via rsrc_load()

Bugfixed shel_write(), so that correct defaultpath is set for starting
programs. (Fixes "TOS selfextracting archive extracted to wrong place"
bugs)

Keep button-waiter until all mouse-buttons are released. This fixes
problems with SoundBlaster Milan.

The full text of the classic book Computer Graphics Primer is now
online at AtariArchives.org:
      http://www.AtariArchives.org/cgp/

Published in 1979, the book highlights the state of the art of
computer graphics at that time. From the back cover:

"This book shows you how to create your own video graphics on the new personal computers being sold across the country. It is oriented toward the Radio Shack TRS-80, the Commodore PET 2001, and the Apple II home computers, and it is geared to the user who wants to know the concepts and techniques for drawing pictures, making graphs and charts, animating shapes and objects, creating mandalas and dazzlers, and just about any application of the visual arts that you can imagine."

The book includes type-in BASIC programs for creating graphics on the Apple II computer. Also of interest are profiles, with pictures, of low-cost and high-cost ($5000 to $70,000) graphics computers of the era.

This is the 33rd book to be made available at AtariArchives.org. The 1984 follow-up book, Computer Animation Primer, is also available at the site.

comp.sys.atari.announce is a moderated newsgroup dedicated
to news relevant to Atari computer users.

** Guidelines for posting to comp.sys.atari.announce **

comp.sys.atari.announce is a moderated newsgroup. In order to be
approved,
posts must offer news relevant to Atari computer users.

What kinds of posts will be approved?
   * Relevant to Atari computers: 8-bit, ST/TT/Falcon, Portfolio,
     Atari's PC clones, clones of Atari computers, or Atari
     computer emulators.
   * Topics may include software, hardware, web sites and other Internet
      resources, events, emulators, and other news relevant to Atari
users.
   * Commercial posts and press releases are acceptable.

What kinds of posts will not be approved?

   * Any post that is not relevant to Atari computer users.
   * For sale posts are generally not approved unless they come
     from a developer or dealer that wishes to announce new pricing
     for product. Sale or auction announcements from end users will
     not be approved unless they are, for some reason, extraordinary.
   * Posts that are not informative.
   * Posts that are not in English.
   * Posts that aren't reasonably understandable (due to, for instance,
     significant grammar problems.)

How do I post a message?
   * Simply use your newsreader to post your message to
     comp.sys.atari.announce.
   * Alternatively, you may e-mail your post to csaa@savetz.com
   * Please do not crosspost. You are welcome to post your announcement
     on other relevant newsgroups (for instance, comp.sys.atari.st
     or .8bit) but please do so as a separate posting.
   * Your post will be reviewed by the moderator, within a few days.
     If accepted, it will then be posted to the newsgroup. If it is
     rejected, you will receive an explanation via e-mail.

How do I follow up to announcements?
   * Followups to c.s.a.a announcements should be posted to
     a relevant Atari discussion group such as comp.sys.atari.8bit or
     comp.sys.atari.st. Followups should not be posted to c.s.a.a.

Standa Opichal has announced:

A new library (libhyp - soon to be open-source) is in the works. Its aim
is to provide anyone with easy ST-Guide's HYPertext files extraction
functionality.

As a side product of this library written in C a new online CGI .HYP
browse script has been created for demonstration (mostly in perl).

Thomas Huth has announced:

EmuTOS 0.8 --- May 30th, 2005

INTRODUCTION

EmuTOS is a single-user single-tasking operating system for the 32 bit
Atari
computers and emulators. It can be used as a replacement for the TOS
images
typically needed today for using emulators and it is also running on some
real hardware, like the Atari Mega STE. All the source code is open and
free, licensed under the GNU General Public License (GPL).

CHANGES SINCE LAST RELEASE

- Improved GEM desktop (more comfortable, many bugs fixed, ...)
- New translations: Spanish and Greek.
- Most parts of the VDI have been rewritten in C for better
maintainability.
- Nearly all Line-A functions have been removed/disabled (deprecated
API).

- EmuTOS can now be compiled with GCC 3.x, too.
- graf_shrinkbox() and graf_growbox() have been enabled again.
- form-alert boxes now also work in ST low resolution.
- The AES behave much closer to the original Atari AES than before, so much
  more old programs are working now.
- And lots of other bug fixes and minor improvements

Have a look at the changelog.txt for more detailed information.

DESCRIPTION

EmuTOS is basically made up of six subsystems:

- The BIOS, which is the basic input output system
- The XBIOS, which provides the interface to the hardware
- The BDOS, which are the high level OS routines, what you know as GEMDOS
- The VDI, the virtual device interface - means the screen driver
- The AES, the application environment services or window manager
- The desktop, which is the graphical shell to the user

The BIOS and XBIOS code is our own developement. It is really written from
scratch and implements nearly all of the TOS 1.0 BIOS functionality, and a
bit more, like e.g. harddisk access.

The GEMDOS part is based on Digital Research's GEMDOS sources, which were made available under GPL licence in 1999 by Caldera.

The graphical parts like VDI and AES are now more or less fully implemented. They work in all the graphics modes of the original Atari ST. On some emulators EmuTOS can be patched to work with much bigger screen resolutions without any problems.

The desktop is not as nice as the original one, but is pretty usable now for a start. You are free to use a more advanced desktop replacement any time, like Teradesk for example.

Since EmuTOS just implements the TOS's functionality, you might want to use MiNT on it in order to run more modern software. EmuTOS is not an alternative to MiNT. But EmuTOS is the only free base OS to boot MiNT.

HARDWARE

This is the currently supported hardware:

- CPU support for m68000, m68010, m68020, m68030, m68040
- FPU detected
- Memory controller (both ST and Falcon)
- Monitor type detection (mono or not)

- WD 1772 Floppy disk controller (write track not tested)
- DMA controller
- MFP
- PSG
- ST shifter
- STE shifter (partitially)
- ACIAs, IKBD protocol, mouse
- MegaST Real-Time Clock (set clock not tested)
- NVRAM (including RTC)
- The native feature interface to some degree

AVAILABILITY

EmuTOS has its home at sourceforge:

    http://sourceforge.net/projects/emutos/

A ready made EmuTOS image or the source can be downloaded from:

    http://sourceforge.net/project/showfiles.php?group_id=36560

It is always available in source form from our CVS server at:

    http://sourceforge.net/cvs/?group_id=36560

If you are just curious or would like to help us develop this nice little
OS, you are invited to subscribe to our Mailinglist for developers at:

    http://sourceforge.net/mail/?group_id=36560

We hope that you like EmuTOS. If you have any suggestions or comments,
we
always appreciate to hear the good and also the bad things about it.

Your EmuTOS development team.

Anders Eriksson has announced:

Last weekend a small supply of JTAG cables for (re)programming the CT60
firmware went on sale, the supply has shrunk quickly, and now only a few
units remain.

If you're planning to upgrade your CT60 with EtherNat or SuperVidel you
will need a JTAG cable to dot he job.

Unlike JTAG cables from PC-stores, you will not need to modify these
ones - they are especially made for the Falcon, and have been tested to
update the SDRAM controller.

If you think you'll be in the need for this cable, hurry up and order
one of the last units available.

The sources for the once commerical text editor EditPlus has been
released by the author, Craig Harvey. This application had a vast number
of powerful features and is of course a very vital addition to The
Orphaned Projects Page.

You will also note that the source package contains a binary version of
EditPlus. To read more and download the files, follow the link below:

Fran?ois LE COAT has announced:

"Eureka" is updated and released on its WEB page. It is a"2D Graph
Describer and 3D Modeller". You'll fetch it at :

http://eureka.atari.org/eurka507.zip That is the Complete Common Edition
http://eureka.atari.org/eurka020.zip Is the Complete 68020 Edition
http://eureka.atari.org/eurkafpu.zip Is the Limited FPU Edition
http://eureka.atari.org/eurklite.zip Is the Lite Edition, working on early ST with
720kb floppy
http://eureka.atari.org/lib_dgem.zip Are Dynamic Libraries Extensions for Eureka
http://eureka.atari.org/tiny045.zip Is the OpenGL Extension (requires previous
package)
The main novelty of this release is the add of 43 3D FMU shapes coming
from the K3DSurf software from Abderrahman Taha.

Hi folks,

a new release of the Atari++ emulator for Linux and Win32 is
available for download at its home page:

http://www.math.tu-berlin.de/~thor/atari++/

This makes again a new stable release (it's been time, the
old stable was rather outdated).

So what's new this time:

- Fixed race condition when switching the resolution, could
  cause crashes.
- Fixed Antic CHARBASE switches, did not keep care of
  horizontal scrolling correctly.
- Fixed leaking key presses from the GUI to the core.
- Fixed PIA Port A handling, Port A input is non-buffered.
- Fixed Monitor backspace key on some broken ncurses
  implementations.
- Added "graphical" single-step trace command for the monitor.
- History of the monitor is now a tad smarter and buffers un-
  finished lines.
- Fixed "dummy writes" for INC and DEC commands.
- Fixed player horizontal split, did erraneously remove the
  old player.
- Fixed timing of the pokey timers, should be more precise
  now.
- Fixed XIO for serial baud generator, argument zero leaves
  baud rate alone.
- Fixed serial input counter for concurrent mode
- Fixed state parser, is now less sensitive to CF/LF vs. LF
  confusion.

I especially want to thank Don Fanning and Sebastian Pachuta for
their time reporting a couple of bugs in the 1.41 release. I hope
they're more or less fixed in the 1.42 by now. Thanks, folks!

So long,
   Thomas

Nils Feske has announced:

The Atari music archive "Fading-Twilight" has been updated with the
release of Excerpt #9. This one features again a big load of Atari

related music by numerous authors, which are partly very exotic this
time. The archive is handled by LotekStyle/.tSCc. and can be downloaded
on Atari.org server.

Anders Eriksson has announced:

A plugin based on SC68 has been released for AmiNetRadio, a music player
for Amiga PPC with MorphOS.

SC68 grants for pretty accurate playback of SNDH and many other
Atari-formats encapuslated into the SC68-container.

FlightSimBooks.com is a new site that features the full text of eleven classic flight simulation books.

    http://www.FlightSimBooks.com

More than 2,200 printed pages have been digitized into 800+ web pages. The titles available are:

   - Jet Fighter School and Jet Fighter School II by Richard G. Sheffield

   - Flying on Instruments with Flight Simulator by Jonathan M. Stern

   - Learning to Fly with Flight Simulator and Realistic Commercial Flying with Flight Simulator by John Rafferty

   - 40 Great Flight Simulator Adventures, 40 More Great Flight Simulator Adventures, Flight Simulator Co-Pilot, Flying Flight Simulator, Runway USA, and A Flight Simulator Odyssey by Charles Gulick

These books, published from 1985-1989, cover Microsoft Flight Simulator and Sublogic Flight Simulator software, plus other flight sim programs including F-15 Strike Eagle and Sublogic's Jet. Users who prefer more modern flight simulators will find that many of the techniques and situations described in these books, such as aerobatic maneuvers and instrument flying techniques, remain relevant to newer flight simulators.

All of the books are available with the gracious permission of their authors.

New book about the Battle between Commodore and Atari

Find out more about the battle between Atari and Commodore in a new book, "The Spectacular Rise and Fall of Commodore". Learn how former Atari 2600/Atari 800 engineer Jay Miner developed the Amiga computer, and how Atari almost purchased Amiga. Find out how the Atari ST was partially designed by Commodore engineers while they were still at Commodore. Atari founder Nolan Bushnell even joined with Commodore to launch the Commodore CDTV, a precursor to the modern DVD player.

The Spectacular Rise and Fall of Commodore is a detailed history of the company behind the best selling computer system of all time, the Commodore 64. This book was almost two years in the making, using over 44 hours of interviews with Commodore engineers and managers.

Title: The Spectacular Rise and Fall of Commodore: The Inside Story
Pages: 624
Size: 6 x 9 inches
ISBN 0-9738649-0-7
August 2005

Hi,

Perry has written a new Howto, it deals with setting up a multi user
environment on MiNT systems and updated his EasyMiNT ST Howto.
But german only, translaters needed!

Bruno has updated the french language package for EasyMiNT.

Ciao

maanke

Hi folks,

please find a new release of the Atari 8-bit emulator for Linux
and win32 on my web page on its usual location:

http://www.math.tu-berlin.de/~thor/atari++/

What's new in this release?

- Too many people complained about sound problems; the main
problem was a DC offset in the pokey output that too easily
causes trouble with some sound cards and amplifies. This
release fixes this issue by an (optional) high-pass filter.
- The 1.43 release integrates a new optional host-system
based RS-232 (R:) handler that does not require the usual
HANDLERS.SYS bootstrap code, but can be patched into the Os
to begin with. Note that you still need to enable the 850
interface box to use it. The old bootstrapping code remains
available for backwards compatibility.
- Keyboard emulation did not check for the pokey keyboard
disable bit.
- The emulation of the Atari/InverseVideo key was broken.
1.43 fixes this.

So long,
   Thomas

Hi all,

I'm thinking of building up a small kit to allow a PS2 mouse to connect to a ST. Its not the same as Effile as such. The proposed project will be a small board (about the size of 2 regular stamps) which will plug direct into the mouse port ont he ST. The PS2 mouse will plug into the other end of the board. It will be a small compact design and won't require any case mods or anything.

Note that his is only for the mouse not the keyboard. With the demise in ST mice and the cheap flood of PS2 mice I think the project if worthwhile.

It will take some time to develop, techie_alison has been kind enough to research the programming behind the device and PS2 protocols. I hope to have a few test boards made up over the next few weeks. After that will be a more updated design. I imagine each kit will probably retail for around £15, it will be a plug and play solution.

If there is enough interest in the project then I will consider building a small batch and get the boards made up at the PCB factory. If there is not much interest then I won't go further than the sample boards. If there is interest then great, more people = cheaper prices and a factory manufactured design.

your choice!

Chris

Version 3.60 of TeraDesk open-source desktop is available at:

      http://solair.eunet.yu/~vdjole/teradesk.htm

TeraDesk is currently the only open-souce desktop available for 16-bit
and 32-bit Atari computers. Developers' goal is to maintain TeraDesk as
a small, simple, fast and reliable desktop, which can run on any TOS-
compatible Atari computer, clone or emulator and which can be be

functional and competetive in the modern multitasking environments and all flavours and versions of TOS-compatible operating system(s), while keeping, as much as reasonable, familiarity with the original TOS desktop.

Several new features have been added since the last published version, mostly in the areas of handling file attributes and access rights, and manipulation of desktop and window icons. Also, some bugs have been fixed.

Users are advised to read the documentation before running the program ;) Some features of TeraDesk may not be immediately obvious.

Have fun.

Organization: Cox Communications
Xref: g2news1.google.com comp.sys.atari.announce:48

Hi!

We're very happy to announce that the ETHERNAT is finally finished!!!
The 100Mbit ethernet part is working fine and though we have no
finished driver for the USB part yet, the enumeration test by Jan
Thomas shows that it will work fine once the USB stack has been
written (also by Jan). For more technical details read the (soon
available) news on our homepage: nature.atari.org.

Now we need to know exactly how many boards we're going to produce,
because it affects the price we need to ask of you. We have done some
more detailed calculations on the final price. Have a look at this:

200 orders => 120 EURO/board
150 orders => 125 EURO/board
100 orders => 138 EURO/board

Shipping costs will be added to this. The prices are including Swedish
VAT (25%) and apply for all EU customers except companies that are VAT
registrated in their respective countries.
For all customers outside the EU instead the following prices apply
(VAT for your country will probably be added by your customs):

200 orders => 96 EURO/board
150 orders => 100 EURO/board
100 orders => 111 EURO/board

HINT: To avoid the 25% Swedish VAT within the EU, let a VAT registrated

company buy all the boards for your country from us and distribute them within your country. Contact us first if you run a company and want to do this.

Swedish customers may pay us in SEK instead of EURO. More info on that later.

Now please send us an email (to "hencox at hotmail dot com" or "henrik at gildaelectronics dot se" or "torbjorn at gildaelectronics dot se") and state exactly how many boards you want. Please don't write anything else, this is not yet your order! And we want this email even from our closer friends in the atari community, because we can't be sure that you want a board just because we know you... :)

We know that we've already asked for your interest in this product several months ago, but we need to get a fresh picture now.

Because Rodolphe Czuba has experienced that 10-20% of all who state that they will buy a board never goes through with it, please be honest when you write this email.

You have two weeks to register your interest (until August 23rd 2005). After that we'll post information on how to prepay us for the boards.

Regards
Henrik and Torbj[illegible]rn

Hi all,

http://www.cps-electronics.co.uk/web/PS2.htm

We are now taking orders for the PS2 to ST mouse converter.

We need to get at least 25 orders to make the project worthwhile! Tell
all
your friends and don't miss this fantastic adapter!

The adapter is 100% plug and play with adjustable 4 adjustable speed
settings, have a FAST mouse in ST HIGH RES! Ditch your old brick mouse
and
go for the smooth PS2 option!

Chris

Version 0.35.2d of the ST-Guide clone HypView has been released.

Latest changes:
- Bug fixed: form_popup in N.AES 1.2.0
- New info dialog with more info about the hypertext.
- Support the keyword REFONLY from ST-Guide
- HypView works better with PlainTOS

Version 3.61 of TeraDesk open-source desktop is available at:

      http://solair.eunet.yu/~vdjole/teradesk.htm

This is a bug-fix update. Soon after the release of V3.60 some errors were
noticed, two of them rather serious, and they have now been fixed. Upgrade
from V3.60 as soon as possible is advised. Beware that any icons created
in V3.60 by dragging objects from directory windows to the desktop may have
corrupt or missing object path information.

Have in mind that substantial changes were made in TeraDesk since V3.50;
although the program has been tested as much as reasonable, it is possible
that some newly created bugs has passed unnoticed. If you observe any
anomalies, please let me know.

See the history file and the hypertext manual for more information.

Have fun.

Version 1.6 of Eric Bacher's interactive 6502 disassembler has been
released. This release is a port to Win32 with a few bug fixes and a
number of new features. You can now find the latest version at its new
home:

http://sourceforge.net/projects/dis6502/

We hope those of you who remember DIS6502 from back in the 16-bit
Windows
days will grab this new one and give it a run. Make sure you take a
look
at changes.txt for release notes, and please enter any bug reports or
feature requests in the project tracker on SourceForge.

Thanks!

RMT 1.21 - Raster Music Tracker with enhanced mouse control etc. You can

get it from the RMT website.

Changes in RMT 1.21

- Enhanced mouse control:

* Set cursor position in trackedit area, songedit area,

instrument parameters / envelope / table area, info / speed area.

* Octave selection by mouse (click to "OCTAVE x-y" text).

* Volume selection by mouse (click to "VOLUME x" text).

(Also you can turn on/off "respect volume" option there.)

* Instrument selection by mouse (click to "XX: instrument name" text).

* Envelope GO/LEN parameter setting area (click to mouse L/R button).

* Table GO/LEN parameter setting area (click to mouse L/R button).

(Areas' locations - see the screenshots.)

- New hotkeys:

SongEdit:

* Enter ... Exit from SongEdit section.

* Home ... Move cursor to first songline.

* End ... Move cursor to last songline.

* PageUp ... Move cursor 4 songlines up.

* PageDown ... Move cursor 4 songlines down.

- New option in Config dialog (menu View - Configuration):

* Don't use hardware soundbuffer

(default is off).

(Maybe it could help if you have some system sound related problems.)

Lonny Pursell has announced:

GFABASIC has always had the big disadvantage to be a "dirty" program.
But these days are finally over! Lonny Pursell has made a GFA editor
called GBE. It looks and feels very similar to the original and is a
clean GEM app, but has one important thing missing: The RUN! button. Who
else than RUN! Software could have made this run button work.

So RUN!Only is a so called runonly interpreter, very much like the one
that used to be shipped for a while by GFA themselves. The big
difference though is, that it is a clean application and even runs with
MiNT's memory protection.

See documentation for further detail.

GUILDFORD, UK -- August 21st 2005 - Reservoir Gods are proud to announce the release of their latest game for Atari Platforms: "Clogged Up".

"Clogged Up" is a brain challenging escape-em-up. It can be played as a single player game or you can compete with a friend in multiplayer battles.

With graphics from Sh3, Sarah & Exocet as well as nine spanking SID tunes from MSG, "Clogged Up" is a treat for the eyes and ears.

"Clogged Up" runs on all Atari ST based machines from the humble STFM to the CT60, where extra hardware is detected it uses it.

Boasting 300 different levels set over seven unique worlds, "Clogged Up" will keep you glued to your Atari until the clogs come home.

"Clogged Up" is available for download at http://www.reservoir-gods.com

ABOUT RESERVOIR GODS: Formed in 1994, Reservoir Gods have been responsible for a slew of titles for Atari machines. From puzzle games "Tautology", "SkyFall" & "Static" through to arcade games "Double Bobble 2000", "Chu Chu Rocket" & "SuperFly". Their demos include "Grimey", "Hallucinations" & "Mind Rewind". They also produced the art package "GodPaint", the diskmag "Maggie" & emulators for GameBoy & NES.

Lonny Pursell has announced:

GFA-Basic Editor v1.20 released

The most important new feature in this release is the direct support for
RUN! Software's new RUN!Only interpreter. The instant satisfaction you
got from hitting the 'Run' button is back.

Many other new features and corrections, too many to list here. Please
see the documentation for details.

Lots of enhancements for this one - download at:

http://sourceforge.net/project/showfiles.php?group_id=145747

Version 1.7

Thanks to Steven J. Tucker for giving us many ideas.

New features:
- The dump popup menu has an option to guess byte type. This option tries to follow the flow of the program beginning with the byte selected by the user. All data in the flow of the program is marked as code.
- There are two other options in the dump popup menu to select next block of unknown type and to change the remaining data to bytes.
- An option has been added to display Zero-Page instructions with absolute addressing mode as bytes. These instructions use 3 bytes instead of 2.
- The disassembly now centers the selected line and displays it with a yellow background.
- Disassembly window has a popup menu which offers options like find, find next, select definition of a label, select all references of a label and rename a code label (Lxxxx).
- Double click on a line in the disassembly window jumps to the definition of the label found in the instruction.
- The disassembly popup menu has an option to return to the previous position after a jump to a definition or to a reference.
- Mouse wheel is now supported and scrolls the window under the mouse cursor.
- The File menu now supports ROM file loading and raw file loading. Only ROM with no bankswitching are loaded.
- 2 sub-menus have been added in the File menu to open recent files and recent workspaces.
- User labels can be exported in xasm format to be loaded in Atari800Win emulator.

- System labels can now be unloaded from the Label menu.

Fixed bugs:
- Opcode $B6 produced a bad disassembly.
- When $00 address was referenced, an L0000 was used but not defined
  in the disassmebly listing. This label is not used anymore.
- 5200 files are loaded through the 'load ROM file' instead of the
  'load binary file'.
- Some Oric files could not load properly because the header of the
  last segment did not match the size of the file. This is not any
  more considered as an error.
- Dialog box for loading sectors from a .ATR is now working fine.

Jan Krupka has announced:

We are happy to announce that our floppy image tool JayMSA is freeware
now.

JayMSA is utility to view and depack files from MSA archive directly to
harddisk without writing a floppy. Beside that JayMSA can create MSA
archives the same way as original MSA program does.

You can download new version 1.08 which is working in MiNT from Jay
Software's website.

It's getting a bit tiresome seeing one misguided American after another with their cutsie little yellow or red-white-blue ribbons on their outsized SUVs. Yeah, I guess it's the thing to do; maybe part of that whole soccer-mom culture. Unfortunately, the only thing they demonstrate is that the person behind the wheel is a clueless, gullible, misguided, nitwit.

If foreign invaders landed on our soil, as we have done in Iraq, I would be the first one to take up arms and repel them. (I suppose that would make me an 'insurgent' by OUR logic.) This, and other aggressive governments have always done their utmost to make it APPEAR as if committing yourself to kill in feuds on distant shores that have nothing to do with the welfare of the citizenry is somehow patriotic.

It is not.

Enlisting in the armed forces, in the absence of a real and impending foreign threat, is no different that hiring yourself as a paid assassin . . the only difference is, you're not getting paid enough. But let's take a realistic look at exactly WHO joins up in an all-volunteer army.

The first group are those who join (during peacetime) for the benefits: to get an education, or because it seems a reasonable career path. Consider carefully! Realize that you are gambling with your humanity. Once you sign that form, you sign away your right to say: "No, that is an atrocity." You put your abilities, including the ability to kill, at the disposal of proven liars, psychopaths . . . enemies of humanity. Do you think that every German soldier in World War II who helped load Jews into cattle cars was a cold-blooded killer? Most were poor kids, just like you, who got caught up in the patriotic frenzy. Once you're in, you're IN. You lose the ability to stop killing until they tell you so. This not only makes you less than human, it makes you less than an animal, for even the animals retain their

freedom of self determination.

The second group are the simple minded, who fall for patriotic entreaties about defending democracy, Mom, apple pie; in other words, all the traditional government propaganda. Do you think Soviet lads subjugated their neighbors throughout the world because they thought the Soviet Union was an EVIL empire? No, they were fighting for MOM, and whatever passes for apple pie in Russia. Step back and examine the lies your government is handing you, and ask yourself if they have the ring of truth. Do you want to be one of the murderers in uniform who opened up on their fellow citizens at Kent State? When you put on that uniform, you give up all autonomy, and become nothing more than a weapon, to be used for whatever evil purposes the scoundrels in government demand (and, if you look carefully, you will discover that the only interests THEY serve are those of the big businesses that own them.)

Finally, you have the hard-core psychopaths. These are the people who WANT to kill. Murder, torture, rape; THESE are the American values upon which THIS group is focused. The cause doesn't matter, they're after the thrill that only warfare can provide.

Just remember: killing for George W. Bush, or for George H.W. Bush, or for Lyndon B. Johnson, or for Richard M. Nixon is not the same as defending yourself, your family, your friends, or your country. Don't be a dupe. Don't Enlist!

Remember -- supporting the troops means supporting Bush aggression, profiteering, and war crimes. Here's an idea: why not take those ribbons, dip them in blood, and mail them to the White House?

I've put out a new revision of the SIO2Linux (formerly femul) program.
This is a simple Linux program for use with a SIO2PC cable. Features
include:

* No kernel modules. It's just one .c file to compile.
* Creates dynamically-sized disk images--they grow to the last sector
  written.
* Mount your local file system as a disk--files are mapped to sectors in
  a virtual image as you read them.

Enjoy.

Back in the mid 80's, I wrote a sector editor in BASIC. Over several
years, I incorporated additional features and tools, as well as re-wrote
various routines in assembly language for speed. I should have released
it back then, but now I've gone back through it and added a few extra
features. I also re-worked all of the assembly language code.

Features include

    * Sector editor
    * Show the sector chain for a file
    * Disk copying
    * Single and Enhanced density support
      Sorry, no double-density support
    * Tachometer
    * Generate the world's smallest Autorun.SYS files

Enjoy!

Matthias Jaap has announced:

Whirl is an esoteric programming language created by Sean Heber and ported to the ST by Matthias Jaap. The instruction set is rather limited: 0 and 1. But it is perfectly possible to create little programs with it! Source code, two example programs ("Hello World" and "99 bottles of beer") and a short manual are included in the archive.

The program is distributed as a TTP application and should work on all ST computers, clones and emulators.

GokMasE has announced:

For the first time since back in May this year, there is now a new
development snapshot of XaAES available. Quite a few things have been
improved and polished up and the new version is definitely worth a
closer look!

Amongst other things there is now experimental support for using texture
backgrounds for window widgets as well as support for changing
resolution from within XaAES. Add to that a comprehensive list of
bugfixes and optimisations and at the end of the day you get a more
mature and polished AES. Especially users that wants to use XaAES in
monchrome mode should pay close attention to this release.

Visit the Un-official XaAES Page to read more and download the
development snapshot.

Greetings all,

Just quietly announcing the new retro mag that I'm working on...
RETRO:BYTES. It's obviously going to plug the hole left by Retro Gamer,
which sadly folded recently (unless the rumours that someone is going
to buy it and relaunch it are true. If they are, then we'll have two
dedicated magazines + gamesTM - and that would be fantastic!) Anyway,
if you want to follow the making of issue one, head over to
http://www.retro-bytes.co.uk/editorslog.rtf and there's an official
forum over at http://www.retro-trader.com/forum

A temporary web site will be up and running sometime next week over at
http://www.retro-bytes.co.uk/ - please note that this will be temporary
this time around, and, apart from the fact that I'm very busy, I'm
NOT a web designer.

Any questions or comments may be posted on the forum, or if you prefer,
you may email me... if I get the chance, I'll get back to you!

Regards,

Shaun.

This is a major release and perhaps the last for a bit, including
segment and byte modification as well as a small assembler:

http://sourceforge.net/project/showfiles.php?group_id=145747

New features:
- Bytes in the dump window can be edited.
- A small assembler is included in the dump window.
- A log window displays log and error messages. No more message box.
- Segment properties (start address and type) can be modified.
- Added an option to split a segment
- Added an optin to remove bad segments (generated by xmodem padding).
- Ability to generate relative labels for an address range
- New dialog box to customize default path for all kind of files.
- Output format is now saved in INI file
- The address of a label is displayed as a comment when selecting a
  line in the disassembly window.

Want to last longer in bed ? Need some viagra, cialis, valium or god
knows what other kind of drugs ? These days most mailboxes are invaded
by such nasty spams... Today YOU have a chance to fight the pills
invasion and keep your system clear from all these threats ! But you'll
have to be fast, VERY fast as only true fighters can prevent the
seemingly unstoppable spreading of coloured pills.

POOZ is an addictive game for one or two players. It runs on all Ataris,
though STe or more is recommended. But you\\\'d better check it out
yourself.

EmuTOS version 0.8.1 has been released. EmuTOS is an open source
replacement for the TOS image files that are needed for Atari ST
emulatores. This version mainly fixes some annoying bugs from the 0.8
release:

- Fixed stupid bug that prevented window dragging
- Fixed some unreadable dialog texts
- Fixed bug in GEMDOS Pterm function
- Implemented VDI calls vs_color and vq_color (for ST/STE)
- Finnish translation and keyboard mapping
- Support for swiss german keyboard mapping

The software"Eureka" is updated and released on its WEB page. It is a"2D
Graph Describer and 3D Modeller". You will fetch it at :

http://eureka.atari.org/eurka510.zip That is the Complete Common Edition
http://eureka.atari.org/eurka020.zip Is the Complete 68020 Edition
http://eureka.atari.org/eurkafpu.zip Is the Limited FPU Edition
http://eureka.atari.org/eurklite.zip Is the Lite Edition, working on early ST with
720kb floppy
http://eureka.atari.org/lib_dgem.zip Are Dynamic Libraries Extensions for Eureka
http://eureka.atari.org/tiny045.zip Is the OpenGL Extension (requires previous
package)

For this release, the 3D OpenGL rendering is enhanced.
Big fun with all this new STuff !

Version 0.80 of the Atari ST emulator Hatari has been released:

- Hatari now supports STE hardware emulation (including STE palette, STE
shifter with horizontal fine scrolling and split screen effects, DMA
sound and STE joypads).
- Hatari can now emulate up to 14 MiB ST RAM instead of only 4 MiB.
- Support for parallel port joysticks.
- Improved GEMDOS HD emulation (added Fattrib() call).
- Adding and removing a GEMDOS or ACSI hard disk should now work
correctly.
- The screen conversion functions have been rewritten.
- Improved manual: Now with screenshots of the options dialogs.

GokMasE has announced:

We have recently been working hard to supply a thorough and accurate documentation for XaAES. Chances are that even advanced users will be unaware of certain features and shortcuts, and since XaAES has had such a tremendous development lately, chances are that new users might be interested to check it out. Hence the need for proper documentation!

The docs might seem too include details some will find trivial at times, but there is a reason for that too - by covering such information as well, the documentation can also serve as a reference for the GUI components.

Nowadays it is absolutely fair to say that XaAES despite its alpha status is a very stable and mature project, that definately has reached the original goal - to offer a free replacement for the AES in MultiTOS. Many would say that it even leaves N.AES behind.

You will find the online documentation on the XaAES website:

July 27 will be the 10th anniversary of the Classic Computer Magazine Archive (www.atarimagazines.com). In celebration, today we're announcing

that the site now offers the full text of 19 issues of ST-Log Magazine. This includes more than 600 articles and a gallery of the magazine's covers.
   http://www.atarimagazines.com/st-log/

ST-Log was devoted to Atari's 16-bit ST line of computers. It began as an insert in ANALOG Computing magazine in 1986. It spun off as a separate magazine for about three years, before being folded back into ANALOG again in 1989. ANALOG and ST-Log were sold to Larry Flynt Publishing in 1988. The Classic Computer Magazine Archive has permission to share the 19 issues published by L.F.P., from April 1988 until ST-Log ceased publication in 1989.

In addition, AtariMagazines.com recently added a cover image gallery for Compute! magazine, with a nearly complete collection of covers from 1980 through 1988. (The site offers the full text of nearly 100 issues of Compute!.)
   http://www.atarimagazines.com/compute/

The site launched July 27, 1996 as "The Digital Antic Project" with the full text of two issues of Antic magazine. The site was later renamed to The Classic Computer Magazine Archive and added articles from STart, Creative Computing, Compute II, Hi-Res, Creative Computing Video & Arcade Games Magazine, and Tandy Whiz Kids comic books.

EasyMiNT has finally been updated in order to support the latest CVS
versions of FreeMiNT/XaAES! The new update includes the packages for
FreeMiNT, XaAES and also Teradesk. If you never been into MiNT, this
program can be described a standalone installer for SpareMiNT
RPM-packages. In other words, a good introduction to MiNT :)

New in this release:

* You can choose now between FreeMiNT 1.15 and 1.16

* New versions of XaAES and Teradesk could be installed

* Added lp.xdd which creates a printer device under /dev

* Update of the rpm packages basic, standard, devel, libs, net

* RAW partition support added again

The files can be found on the authors website:

BODY: ST-Sound GP2X is a YM/SC68/SNDH music player for the GP2X
handheld. It uses the STSound engine from Arnaud Carre (http://
leonard.oxg.free.fr) for playing YM files and SC68 for SC68 and SNDH files. The
GUI is
based on Aylet.gp2x by ParkyDR.

GFA-Compiler (revision 10)
GFA-Linker (revision 7)

- Bug related to $X with VAR fixed
- Bug related to $X with FUNCTIONs fixed
- Norwegian translation added (thanks to Ozk)

It's now possible to properly link DRI object files to and type of
PROCEDURE or FUNCITION, with or without pointers (VAR).

Originally distributed on the Centek website, Cecile is a harddisk
driver for Atari or compatible systems. David Godec has kindly decided
to release the sources for Cecile under the General Public License, GPL.
After the sources for AHDI surfaced recently, the sources for two Atari
harddisk driver are now available. However, Cecile is the first one to
be released under GPL.

The version 0.90 of the Atari ST/STE emulator Hatari has been released.
New in this version are:

- Better Spectrum 512 support (60Hz support, improved I/O memory
waitstates).

- STE right border opening support (used in Obsession, Pacemaker).

- Blitter Smudge mode support (used in Pacemaker demo).

- Wheel-mouse simulates cursor up and down.

- Slightly improved FDC handling, --slow-fdc option is not anymore
needed.

- Bugfix to MFP, sound works now in more YMRockerz releases.

- Bugfix to GEMDOS path handling.

- Re-written command-line option handling.

- (Again) lots of code const/static, type usage and indentation cleanup.

- Preliminary support for TOS 3.0x and 030 TT software that runs in ST resolutions and doesn't need PMMU.

- Native GUI for Mac OSX.

- ACSI emulation fixes to get HD formatting to work with AHDI 5. HD emulation now works quite fine with AHDI 5 (but other HD drivers are currently not supported).

- Joystick shortcut changed to toggle cursor emulation between ports 0 and 1.

- Keys for all Hatari shortcuts can now be configured from hatari.cfg.

- Added command line option for setting ST keyboard mapping.

- Joystick command line option requires now parameter for a port for which the joystick cursor emu is enabled.

- Fixed relative mouse event handling in zoomed low-rez.

- Hatari shows now more of the bottom borden (screen size is now 384x276 instead of 384x267).

- Fixed sync delay timings - sound should now be better (e.g. on Mac OS X).

- Added basic support for compiling Hatari with MinGW.

Sources for the programming utility X-Debug, written by Andy Pennel, has
been released to the public. This piece of software is a debugger that
mainly targets Lattice-C but may offer some functionality for other

languages as well. Thanks to being distributed under a very generous
legal license it seems that people are free to do whatever they want
with the sources.

Read more and download the sources here:

Hi folks,

a new release of the Unix/Win32 atari emulator is available for download
at

http://www.math.tu-berlin.de/~thor/atari++/

Credits for this release go to:

- Sebastian Pachuta (again!) for pointing me at some bugs in the player
  missile timing logic. It is still not perfect, but much closer than
  before.

- Bennet (beipdev@yahoo.com) for providing me with very detailed
information about the antic DMA timing that got incoprorated into the

1.50 release.

What's new this time: Aparently a lot, thus a new tenth digit in the
release counting:

Atari++ 1.50
   - This release is mainly a bug-fix release that addresses
     a couple of issues especially on 64 bit systems:
   - Fixed various erraneous varargs usages, mainly active during
     error handling, that caused crashes on AMD64 systems.
   - Fixed reference to the linux joystick device. Newer kernels
     place this device at /dev/input/jsx instead of /dev/jsx,fixed.
   - The H: device handler wildcard matcher now also finds files
     whose extender consists of blanks.
   - The joystick handler contains now a workaround against
     some faulty implementations of the emu10k1 (SoundBlaster)
     gameport interface and got basically self-calibrating by
     using the second unused joystick axis.
   - The DMA timing got reworked heavily. Thanks for that goes to
     Bennet (beipdev@yahoo.com) for providing me with more detailed
     information.
   - The way how horizontal timing is organized changed
     heavily, and the timing constants for ANTIC and GTIA changed.
     Thus, new items in the menu will adjust the timing, and
     old ones got removed.
   - The player/missile generator changed a bit and is now aware of
     some internal GTIA reaction times. Thanks for providing
examples for this goes to Sebastian Pachuta (thanks again!)
   - Some heavy bugs got fixed in the X11 interface that could have
     caused conflicts with at least some window managers because it
     re-opened windows to fast. These problems are now avoided by
using a more careful logic.
   - An out-of-bounds memory write in the mathpack emulation got
fixed.
   - Error handling in the complete menu and error requesters
     itself got improved.
   - Errors from the X11 subsystem are now captured and reported in
     a more user-friendly way.
   - The complete user menu creates now string-gadgets for numeric
     values whose numeric range is too large to be fine-tunable by
     a slider alone.
   - Improved the speed of the X11 true-color output by enlarging
     the output/color buffer.

And, hopefully, the file server of the TU will make it for a couple of
days, this time... (-;

So long,
   Thomas

(TURGEN SYSTEM 3 is a utility which transfers data from PC to 8-bit
ATARI using Turbo 2000/SuperTurbo)

* New SuperTurbo plugin, allows faster data transfer (2725 bd instead of
2270)

* Improved and simplified plugin system, ready to generate any kind of
Turbo

* Documentation improved and fixed

* Users can sample their own pulses to reach better speed

* Version 3 is now experimental but should work fine

* Source code available

As many of you certainly are aware of, FreeMiNT/XaAES have not been
running on 68000 machines since XaAES was turned into a kernel module.
Reason for this was mainly the lack of test equipment, a problem that
has been cured since.

Todays very early pre-alpha binary of FreeMiNT/XaAES consist of 3
subdirectories, and if copied onto the root dir of your boot disk it
should enable you to boot right into XaAES with Teradesk launched as
desktop. Also note that the sysdir is 1-17-cur for this particular
version of FreeMiNT.

In order to use this version of FreeMiNT/XaAES you should have at least
4Mb of RAM. If you have an Atari with 020 or better CPU you are adviced
to use the latest alpha release instead of this 000-specific build.

* Separate archives for both variants were removed. Now there is only
one archive but two compile scripts.

* GUI improved. SAP tune info is encapsulated with scrollpane, so
program window keeps its size and does not expand wildly.

* New configuration option - Expand SAP tune info at startup.

Enjoy listening to new ASMA 3.1 tunes with mmSAP

A small but in eyes of others quite significant feature addition gives
uses the ability to browse ST-Guide .hyp files that are hidden within

various archive files stored all around the Atari related WEB.

This is supposed to be a major step up in its overal usability level.
Just use the software package URL to see the documentation.

For example:
http://libhyp.atari.org/hypview.cgi?url=http://users.skynet.be/atarix/zvi
ew.zip

http://libhyp.atari.org/

Miro Kropacek has announced:

At first Im happy to announce the long awaited project, SatanDisk, is
ready for production. Main features:

- direct connection between ACSI and MMC/SD card slot
- plug'n'play
- about 120 KB/s transfer speed
- MMC card support (SD cards aren't supported to this time)
- HDDRIVER compatible

The prize is very low (about 35 Euro). You need to register at project homepage, login and enter your preorder. The number of preorders isn't limited in any way but in some extreme low number we have to increase the prize (and vice versa).

Don't forget SatanDisk is completely open-source based so all schematics, firmware etc is available on project homepage for your custom build.

Secondly, I want to announce the cancellation of mXtreme project since there's much better option -- PhantomS (see news on atari.org server). In fact, we're happy Petr decided to do such step since we can focus on another things (i.e. coding software for Falcons). The prize is very cool (1/3 of mXtreme), it's already done and in the end it's nearly the same as we planned mXtreme. I can only recommend you this piece of hardware!

Petr Svoboda has announced:

I overtook production of Phantom accelerator. PhantomS is modernized
reincarnation of the popular Phantom. It boosts the system frequency
(BUS, CPU, FPU) from 16 to 25MHz -> raw power gain is 56%. DSP and some
FPUs can be overclocked to 50MHz.

PhantomS is perfect supplement to CT63, as CT63 doesn't boost the
mainboard.

The price is 35EUR, and first pieces are ready.

More informations and contact on website.

Miro Kropacek has announced:

We decided to produce Falcon speeder similar to Nemesis/Phantom in the
past. This speeder allows you to set resolutions like 800x608/256
colours or 640x480/hicolour, it speeds up DSP, CPU, FPU, Videl up to
36%. Your Falcon will move much better! It's 100% compatible with
CT60/63 and 99% compatible with original Falcon030.

We need at least 50 pre-orders. The prize is 100 Euro. For more details
look at homepage bellow.

KEEPTIME v1.0 is a patch to disable a system time reset when the battery
of
your RTC is dead. This text has been written for the Atari Falcon. It
may be
applied to Falcon, TT and compatibles.

The Problems

"My Falcon losts the time and date when I switch off."
(15/31/07 0:00 for each boot)
"My Falcon boots in low resolution."
"My TOS is always in English and the keyboard is Qwerty."

The Explanation

Whenever you are shutting down your Falcon, the time,the date and NVRAM settings are saved into the RTC chip (Real Time Clock).
The Real Time Clock can also be named 'CMOS Clock' or 'CMOS Battery'.
The RTC contains a 128 bytes memory to save setup information.
The approximative life length of this chip is about 10-12 years because the
RTC contains a built-in battery. The Falcon is not a very young machine, so
the battery of your RTC is now dead !!

This chip soldered on the Falcon motherboard (U64) is a Dallas DS1287. It
can be replaced by unsoldering with the same chip or equivalent (ST MK48T87B-24, MC146818A, MCCS146818BM) . The Dallas DS1287 is, in fact, a DS1285 which a lithium battery has been included in the same block. So you
can also break the shell of the RTC to find the built-in battery.
Then, you must disconnect the circuit of the battery and redirect it to a new external battery added. You can find infos about this process on Atari
forums on the web or inside ST Magazine.(issue 141)

Unfortunally, you don't want to open your Falcon and replace the RTC chip because you think you are not able to do this !

The Solution

First of all, a good solution is to launch the classic accessory Control Panel to set the time and date for each boot of the machine.

Yes, it's a safe solution but there is a problem !

If you are using TOS or MagiC operating systems, when you quit a program, a
time and date reset occurs ! No problem, if you are using Mint OS.
I think it is a little bit irritating to work with that !

It is due to the specific XBIOS Function Gettime(). This same function can
be found on TOS versions 3.xx (TT) and 4.xx (Falcon).

This function is called by the system when you return to desktop after closing an application.(I don't know why...)

The Gettime() function has a special behavior when it finds that the battery
of the RTC is dead, this function simply resets the time and date!
The dead battery information is sent by the RTC itself.

KEEPTIME is a patch to disable in TOS the time reset by Gettime() function
if the battery of your RTC is dead.

http://doyeuxyvan.free.fr/keeptime/v1.0/

You must run it in the AUTO folder.

Caution: To take effect, the TOS must be found in RAM !
Basically, the Falcon works with the TOS located in ROM.
Therefore, the TOS in ROM must be copied in RAM.

So you can use the excellent free tool by Uwe Seimet called ROMSPEED:
http://www.seimet.de/files/atari/romspd31.zip
http://doyeuxyvan.free.fr/keeptime/v1.0/romspd31/
You have just to run ROMSPEED.PRG in the AUTO folder before KEEPTIME.PRG.
In this case, you must know that the MMU is used by ROMSPEED to remap TOS in
memory. KEEPTIME takes into account this functionality to locate the TOS.

Under MagiC operating system, the same function Gettime() as the TOS is present. However, you don't need to run ROMSPEED because MagiC is already loaded in RAM.

Copy in this order ROMSPEED.PRG and then KEEPTIME.PRG in your AUTO folder (Generally C:AUTO). Be sure that your XCONTROL.ACC file is present in the
root directory. (Or any kind of another tool to set time and date)

"Thanks, time and date reset has been disabled as long as my Falcon is powered on, but I'm still booting in low resolution with wrong keyboard configuration..."

Yes, it remains the NVRAM configuration problem.
You can find different tools to set up keyboard, TOS language, etc.
But you can only reboot your Falcon if you want that parameters take effect.

I have selected NVRam by Centek:
http://centek.free.fr/atari/softs/nvram.zip
http://doyeuxyvan.free.fr/keeptime/v1.0/nvram/

With this tool you can, of course, configure the NVRAM (into the RTC chip). In addition, you can write a bootable program on a floppy disk which
writes your selected configuration into NVRAM chip for every Falcon boot. Be sure that your floppy disk is present in the drive of course !

Follow this process to create a bootable floppy disk with NVRam:
- Run NVRAM.APP from the desktop.
- Set keyboard and TOS language, time format, boot resolution, ...
- Click on the floppy disk icon and insert a floppy disk in drive A.
- Click on the left icon (NVRAM -> Floppy Disk) in the new window opened.
The program quickly writes the boot sector program on the disk with your NVRAM Settings.
- Then quit NVRam application. Your floppy disk is good.
(If you click on the NVRAM icon for quit, the settings are saved on NVRAM
chip, but to take effect you must reboot. So, you can perform inifinte reboots with your good parameters until you switch off your Falcon.)

At each boot, NVRam bootable program looks for if it has been already installed in memory. In the case of NVRam already installed, the NVRAM config is not written.

So be careful when you have just switched off your Falcon, the memory and the RTC are not cleared instantly because it may remains residual current in
the components. I advise to wait a long minute.

The End

Here is my summary procedure to work with a dead RTC battery:
- Switch on the Falcon with the correct floppy disk in drive.
- Very quickly, the floppy disk boot program will be read (You can read on
the screen NVRam flag) and a system reset will occur.
- Now your Falcon boots with the correct NVRAM settings.
- After comes ROMSPEED and KEEPTIME loading.
- On the desktop, it remains to set the correct time and date in the Control
Panel.
- That's all! Good Luck!

Hi,

the new version 4.96 of tos.hyp is available.

There is a html and a st-guide version, both in english and german
available. The archives are present at chapilie.rma.ac.be

There are also online versions available:
english at http://toshyp.atari.org
german at atari.mbernstein.de/prog/tos

Note that not all part are translated from german to english. The
english version contains parts which are still on german.

Best regards
Michael Bernstein

Yvan Doyeux has announced:

This new release is the result of six months of irregular but always
intense
work. The audio editor for Atari Falcon becomes more and more stable and
reliable with this 2.091 beta version. Many bugs of general use have been
fixed.

Studio Son 2.091b is available in the wonderful french language:
http://doyeuxyvan.free.fr/studioson/std2091b/STD2091F.ZIP

BUT Studio Son is back in English !
http://doyeuxyvan.free.fr/studioson/std2091b/STD2091E.ZIP

You can, of course, find the classic 68030 and 68030+68882 versions in
these
archives.

I have performed a lot of hard tests to check the quality of my
algorithms.
I have written a lot of different DSP and C programs to obtain correct
results. But, it is still a beta version, so be careful with your
samples !

This version has been tested with an original Falcon 030 with a 68882
coprocessor. The CT60 card is not officially supported.

Bugs fixed:

- Crashs when filtering under Magic fixed.
- For a resample process under Magic, internal file management fixed.
- Significative noise reduction of plopping sounds as long as you use
Studio
Son.
- Management improved of AIFF files compatible with Cubase Audio. These
files are now saved with a physical size rounded to 1024 bytes multiples.
Useful to prevent crackling noise when you import your AIFF files with
Cubase Audio.
- Buggy "Scrub" function rewritten. No crash occurs.
- Reverse stereo bug for a "Scrub" fixed but still in beta test mode.
- Buggy "Cross Fade" function improved. Autocorrection for wrong
parameters.
The UNDO is also correct.
- Cut, Copy, Paste, Insert and others have their UNDO bugs fixed.
- Bug of the current working folder fixed. (After an Insert for example
)
- DSP effect after a Resample and Filtering is now restored with no
problem.
- Overall settings saving are now re-enabled ! Up to date, you MUST keep
the
STUDIO.SYS folder.
- Rewritten "New Sound File" function. You can now create a file with the
fileselector, choose a frequency, ...
- Rewritten "Apply Effect" function. Sample gap subtly fixed. Due to the
DSP
real time application of this function, it is obvious that it remains a
very
small gap into your final sample. This gap is usually filled by zero
values
as it has been thought for this rewritten function.
- Markers management bugs fixed. (Delete, saving and loading procedures
)
- There was play error with "Preview Cut" function. It's now okay.
- Block selection with SHIFT+TAB to the next marker has been debugged.
- Sample time length is now updated after any UNDO.

- Little bug fixed during a play actived by the space bar with an exported
sample from Studio Son.
- Many another minor bugs.

New features and bugs fixed:
(since 2.09b version)

- Resampling function added (Linear Interpolation).
- Resampling function includes a filter and linear interpolation code in only one DSP program.
- You can resample from 2 Khz to192 Khz.
- WAV files opening issue fixed.
- Huge undo bug fixed.
- Huge bug of the volume of mono samples filtered fixed.
- FIR filters (Low Pass, High Pass, Band Pass and Band Reject) up to 2048
coeefficients.
- Resample process can be followed by a LowPass filter up to 1024 coefficients.
- DSP Filter algorithm improved. The speed of the treatment have been increased. Now you can enjoy a good optimization of the filtering process.
- The end of the sample is now truly filtered.
- Vu meter clipping problems fixed.
- The cursor running is now correct when sample frequency is not the same as
the system frequency.
- Desktop background pattern modified to improve the work in monochrome.
- Redraw bug of the desktop in monochrome corrected.
- Several dialog boxes fields bugs fixed in monochrome.
- Crashs at very high zoom levels fixed.
- You can now really select all the sample with the mouse.
- You can now really place the cursor at the end of the sample with the mouse.
- Wrong size of the blocks at the end of the sample corrected.
- You can now create a block with a "one sample" size when you make a long
click on a part of the sample.
- New alert boxes for the Filtering and Resampling function.
- New internal undo for the Resampling function.

New function "Resample..." allows you to change the frequency of your samples with a linear interpolation and an optional Low Pass filter.
The "Filtering..." function enables you to carry out FIR filters (Low Pass, High Pass, Band Pass and Band Reject).
This is performed by the DSP 56001 and with Direct to Disk process.

Known bugs:

- Several internal DSP effects can sometimes result in a reverse stereo mode, take care of this.
- No sound when playing very high frequency samples.
- Slowly WAV files opening.
- Selected block after a resampling task is not deleted.
- Sample duration and time counter are wrong when the system frequency doesn't match with the sample frequency.
- You can hear some noise when playing WAV files at fast speeds.
- Unable to reduce physically the size of a sample when you cut blocks.
- Make an undo after the "Replace" function have no effect.
- A lot of useful alert boxes need to be added.
- In the time counter, the value 99 is followed by 10.
- Several little bugs into the sample window.
- The icon of the function "Generate Low Frequencies" differs with the colour of the resolution.
- Little bugs of sample drawing.
- Random error messages when filter steepness is very low.
- It might remain some english translation errors.

If you are using Studio Son on a single TOS, I strongly recommend the launch
of ARROWFIX.PRG in the AUTO folder:
http://doyeuxyvan.free.fr/studioson/std2091b/arrfix15/

If you are using NVDI, just run ARROWFIX.PRG after this.
Otherwise, GEM must be copied in RAM with the program GEMRAM.PRG before running ARROWFIX.PRG:
http://doyeuxyvan.free.fr/studioson/std2091b/GEMRAM16/

If you have troubles to run Studio Son under Magic, you can use the patch DSPSLOW1.PRG by Centek included into the package or you can find it here:
http://doyeuxyvan.free.fr/studioson/std2091b/DSPSLOW1.PRG
Don't run DSPSLOW1.PRG if you launch Studio Son under TOS otherwise you might have display or DSP locked issues.

You can also use the nice DSPXBIOS patch by Didier Mequignon:
http://perso.wanadoo.fr/didierm/files/dspxbios.zip
http://doyeuxyvan.free.fr/studioson/std2091b/dspxbios.zip

If you use an external clock, run FDI_INIT.PRG into the AUTO folder:
http://doyeuxyvan.free.fr/studioson/std2091b/FDI_INIT.PRG

FPATCH2.PRG is now included in the package.

You can also download self-extracting STZIP unpacker:
http://doyeuxyvan.free.fr/stzip26/STZIP26.TOS

Have fun !

Yvan Doyeux

And Happy 80th Birthday Granny !

Hi all,

As the Founder of CPS Electronics I have closed the biz as of 2007. As
such I am selling stuff on Ebay under
http://stores.ebay.co.uk/exxos-surplus-electronics I keep listing items
so check back. Theres a load of stuff not listen yet. Drop me a line if

you like.

As one of the developers for PeST all information is no longer online via cps-electronics website. Remaining PeST's are currently being sold on Ebay. I have setup a website http://pest.atari.org/ Which will list sales distributors and info(when I get around to updating it).

I have setup a new website www.future-technologies.co.uk though at this time it is unknown what will be placed there. Currently you can view a about me page at http://www.future-technologies.co.uk/video/

Other files of interest are slowly being ported over to stos.atari.st website. Documents such as my 1.44 controller will all vanish of my pipex account at the end of this month. Currently I do not know where past projects will be uploaded to. I will imagine such items will be placed on the new PeST site in the future. I will try and retain as much info and pages as possible

Thats all for now, happey new year to you all!

Chris

It happened 12/21/06:

2.00
* Great speed up for video recording !
* Video recording support both 25 and 50Hz rate

* Screen is now 400*274, no more black lines at top and bottom in
fullscreen (in GPU mode, enjoy fullscreen demos !)
* More pixels detail in "sound output debug" graphical view
* CPU rendering finally compatible with 16 and 32bits rendering, should
run in windowed mode on more machines !
* CPU rendering enanced, SainT should work on software DirectX machine
(some laptop)
* faster and cleaner low-pass filter routine
* removed old code path for dynamic texture
* removed all old-fashioned CPU rendering modes (blend, interlace)
* fixed "msvcr71.dll" missing message.
* Again a new 68000 prefetching routine
* fixed nasty bug if any shifter write at the very end of the frame

The software Eureka 2.12 is updated on its WEB page. It is a "2D Graph
Describer and 3D Modeller". You will fetch it from

http://eureka.atari.org/eurka702.zip That is the Complete Common Edition

http://eureka.atari.org/eurka020.zip Is the Complete 68020 Edition

http://eureka.atari.org/eurkafpu.zip Is the Limited FPU Edition

http://eureka.atari.org/eurklite.zip Is the Lite Edition, working on
early ST with 720kb floppy

http://eureka.atari.org/lib_dgem.zip Are Dynamic Libraries Extensions
for Eureka

http://eureka.atari.org/tiny045.zip Is the OpenGL Extension (requires
previous package)

This publication corresponds to 20th anniversary of its starting
developments, that began at first months of 1987.

Have big fun with this new STuff !

Hi folks,

a new release of atari++, the C++ based atari 8 bit emulator
for linux and win has been released.

You'll find it in its usual location at:

http://www.math.tu-berlin.de/~thor/atari++/

No major changes have been made in the 1.51 release, it
only features a couple of cosmetical changes for the
monitor output.

So long,
   Thomas

Nosty invites to his site (real3d.atari8.info) where he has presented
his new idea: 3D glasses for 8-bit Atari. Available: interface
schematics, descriptions, demonstration software.

English version of the site is ecpected soon, meanwhile everything is
simple and should be understandable.

Caverns of the lost miner is logical game inspired by SUPER MINER. You
must guide the miner through 13 caves and collect all diamonds. Written
in C and ASM. Source code available.

Coda has got his USB mouse driver working on a Netus-Bee prototype. A
video of it in action can be found at http://hardware.atari.org/news.htm

He is also apparently investigating a fix for USB printer support as
well.

I hope the benefits of this work should also translate to those people
who have got an EtherNat as well. :-)

ST Magazine issue 139/140 is available. This issue is very late and we
are sorry for this. Due to the big delay, we decided to make a 48-page
issue (instead of 36).

By the way, issue 141 will be ready very soon (end of February).

All ST Magazine issues (except 132) are available at 16/32 Systems.
Don\\\'t miss the special issue about the 20th anniversary of the Atari
ST.

And for console lovers, ReVival will be available soon at 16/32 Systems
because the latest issues are now translated into English (issues 29 to
32). Of course, ReVival also speak about Atari consoles!

Link to 16/32 Systems:
http://www.1632-sales.zenwebhosting.com/acatalog/ST_Magazine.html

Link to ST Magazine web site:
http://stmagazine.org/

- Note our web site includes fresh news about Atari computers -

Thanks for reading :)

http://rtdos.com/tiki-index.php?page=The+BASIC+Language+Retropedia

working on a retropedia of sorts for the basic language; what we are trying
to do here is create a xref system of the different commands each dialect of
basic used and how each dialect of basic used them. we're trying to cover
all basics for all machines (from the first machine that used basic up until
as recent as possible or feasible); back in the early to mid 80's there were
TONS of books on the subject and we're trying to re-create that here (since
most other classical computing sites contain information on the various
machines we are trying to gather programming information on these machines
so, no, we're attempting to NOT duplicate the same information on other
sites although we'll link to these sites when necessary, possible, and or
allowed by these other sites).

Hi folks,

a new release of the C++ based atari 8 bit emulator has just been
released. You find it at its web page at:

http://www.math.tu-berlin.de/~thor/atari++/

Credits for this release go to Waldemar Pawlaszek for detecting
and fixing several bugs in the 65c02 emulation code, thus the
CPU emulation for the advanced member of the 6502 family has been
reworked heavily.

In addition, the interface to the monitor/disassembler has been
reworked as well to ease the integration of other members of
this family.

Have fun,
   Thomas

After a long time without new release, EmuTOS 0.8.2 has now been
released to the public. This release brings you various fixes and small
improvements that have gathered during the past 1.5 years:

- Mouse wheel direction is now Milan compatible.

- Updated Finnish translation.

- GEMDOS Pexec mode 50 PE_RELOCATE defined- it gets raw TOS executable
data and relocates it as if it was loaded normally.

- Fixed possible system crash in HBL handler.

- Cleaned up & fixed memory initialization code

- New XBIOS functions for TT shifter: EsetShift, EgetShift

- Fixed a bug in the ACSI driver (now works with Hatari!).

- NVRAM checksum calculation was wrong - it\\\'s fixed now.

- New XBIOS functions for Falcon Videl: Vsetmode (VGA only) and Vmontype.

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was
updated. The goal consists in valid links, even if it corresponds
to sometime dated information. Part of those bookmarks persist since
the creation of the WEB page, 10 years ago.

The interest with these numerous bookmarks, there's 552, is to
constitute an ATARI uptodate and dedicated search engine of the
online scene. It is a service provided by Google Co-op. The base
of this engine is a collection composed from time to time. It has
become quite consistent now.

This is a first experience in the direction of WEB 2.0, because
even if I'm responsible of its creation, *ATARI Search Engine*
can possibly be extended by everybody connecting at

<http://www.google.com/coop/cse?cx=014753128619202207476%3Atzogojpdahi>

Have a good ATARI WEB Surfing :-)

Hatari version 0.95 has been released. This release brings you basic
Atari TT and Falcon emulation! Please note that both new emulation modes
are still highly experiemental,some few games and demos work, but most
still have more or less big problems. Basic emulation of Falcon video
shifter (Videl), NVRAM and DMA sound is in place. The biggest drawback:
There is no working Falcon DSP emulation yet.

Other things that have been added / fixed:

 Screen/Shifter emulation timings have slightly been changed. Some
things now work better, some others work worse...

- Some patches for compiling on RiscOS and AmigaOS have been included.

- Compiling Hatari for Windows now works better.

- Added Hatari icon (hatari-icon.bmp).

- Fixed "movec" bug in 68020 CPU mode.

- Keyboard shortcuts for loading & saving memory snapshots (AltGr+k &
AltGr+l).

- The built-in debugger has been slightly improved to be more
user-friendly.

- Added "hmsa" tool - a little program for converting .MSA files to .ST
and vice versa.

Hi folks,

just a little EasyMiNT update.

- Bugfix: XaAES couldn't be choosed
- Bugfix: Error on installation of ghostscript
- Added newest kernel, XaAES and Teradesk (cvs) versions

Information: The error on the m4 package is not a fault of EasyMiNT, it
seems there is a script missing in this package. The m4 package will be
installed, despite of the error message!

Have fun!

maanke

CDLab 0.91 is available.
http://doyeuxyvan.free.fr/cdlab/v0.91/CDLAB091.ZIP
A CD-R burning tool for Atari-compatible computers.

New features

- New audio formats for audio extraction. (AU/SND, AIFF, AIFF Cubase
Audio).
- Filenames mask for audio extraction.
- Interface improvement in Monochrome.

Main features

- Audio track extraction.
- CD-RW blanking function.
- DAO (Disc-At-Once) copy for any single-session discs. (But it
doesn\\\'t
work with my MMC compliant drive)
- TAO (Track-At-Once) multisession mode.

You need the SCSIDRV interface. (already included in HDDriver)
You can also run this program before CDLab.
http://doyeuxyvan.free.fr/scsidrv/SCSIDRV.PRG

CDLab is now released under terms of the GNU General Public License.
The source code can be retrieved here:
http://doyeuxyvan.free.fr/cdlab/v0.91/

Original Francois GALEA website:
http://fgalea.free.fr/cdlab/

   Subject: 8BIT>MyIDE Tool V0.30 released
   Date: November 12, 2007 5:26:24 AM PST
   To: comp-sys-atari-announce@moderators.isc.org
   Reply-To: hias@horus.com

MyIDE Tool V0.30 is now available from my homepage

http://www.horus.com/~hias/atari/

MyIDE Tool is a program for Linux/Windows PCs that provides

direct access to MyIDE harddrives. Just hook up your IDE harddrive

or your CompactFlash card (either with a CF-IDE adapter or with

a cardreader) to your PC and quickly transfer ATR files from/to

your MyIDE drive!

This version also supports Shawn Jefferson's MyIDE Image Manager

(version 4.1 is required, previous versions are not compatible

with MyIDE Tool) so you can specify category names, sort image

manager lists etc. on your PC.

so long,

Hias

Hi folks,

a new release of the C++ atari emulator is available for download at its
usual location:

www.math.tu-berlin.de/~thor/atari++

This release fixes the ADC and SBC implementation in BCD mode if
supplied with non-BCD input. Furthermore, support for network mounted
data is better now, and I also addressed a keyboard issue that made some
keys effectively unreachable. As always, you find sources and binaries
on the page.

Have fun,
   Thomas

Since Arnor Ltd went bust, the two programmers and I have been supplying
and supporting the PC versions of Protext v6.7 and its database
companion Prodata v1.23 through Protext Software.

We have now decided the time is right to make it, and the latest Atari
and Amiga versions, available for free download, so we are doing just
that.

It is being arranged now and as soon as I have a URL to post here, I
will.

Pecus and Pirx decided to release their 4-years in development game for Atari
8-bit computers.

About authors:

Pecus created first Amiga to 8-bit Atari module converter and player
(SoundTracker Player).

Pirx was engaged in several commercial 8-bit games like Operation Blood,
Special Forces, Bank Bang and others.

I've uploaded a new version of WriteAtr (V0.92b) to my homepage

http://www.horus.com/~hias/atari/

This version contains experimental support for the enhanced density
(1040 sectors in MFM) format.

Although most of my datasheets about uPD765 compatible floppy
controllers contain a note that this format (128 bytes per sector
in MFM) doesn't work, some experiments showed that my PC
(350MHz P-II, ASUS P2B mainboard) is able to create this format,
but it cannot read the disk it just wrote :-) But then - my
stock 1050 happily read from and wrote to the disk!

So feel free to try it with your PC. I can't guarantee it will
work at all for you so use it at your own risk!

BTW: for those of you who don't like to read manuals, here are
the command line parameters to use the enhanced density format:

writeatr -f9 -n my.atr

so long,

Hias

Hello,

(7/24/2003)
Adamas 1.8 Pre-Release 22
http://draconis.atari.org

Pre-Release 20 is a Release-Candidate of the final version 1.8. Some
improvements in the GEM implementation, beside some other changes. For
installation you need an installed version 1.7, because the 1.8 files
are only replacements or extensions to it.

Hello,

the two libraries PCTOS.LIB and PCGEM.LIB, nearly 100% compatible replacements
of the PureC original libraries, are available: PCTOS 0.5.0 and PCGEM 0.9.0.

PCTOS 0.5.0
- Binding for all (X)BIOS and GEMDOS functions, PAMsNet, MiNTNet
  for which I have any docu
- Compatible to the PureC library PCTOSLIB.LIB (nearly 100%)

Download
MausNet: MAUS LL (++40-8192-9969999, im GPT M.C.A.Programmieren)
Internet: http://acspro.atari.org

Archives
PCTOS050.LZH   88488 Bytes 2003-07-29 20:16:48 Uhr (lib incl. src)
PCTOS050.ASC   470 Bytes 2003-07-29 20:17:24 Uhr (PGP signature)

PCGEM 0.9.0
- Binding for all VDI-Funktionen (incl. NVDI 5) for which I
  have any docu

- Binding for all AES-Funktionen (incl. N.AES 2.0, MagiC 6)
  for which I have any docu
- Multithreading save (integrated MT_AES.LIB)
- Compatible to the PureC library PCGEMLIB.LIB (nearly 100%)
- wind_get/wind_set compatible to PureC library, but without
  the problems of PureC for the newer modes
- Pure multithreaded Version of the library without the
  compatibility functions

I'm merging the library PCGEM.LIB into the GEMLIB but with a interface nearly
100% compatible to the PureC orignal library. This is only a step to this goal.

The Best of Creative Computing Volume 3 is now available on the Web in its
entirety. Published in 1980, this book is contains 300+ pages of articles,
reviews, and programs first published in 1977, the third year of Creative
Computing magazine.

http://www.atariarchives.org/bcc3/

This is the final book in the Best of Creative Computing trilogy.
Atariarchives.org also features the Best of Creative Computing volumes 1 and
2, as well as 15 other classic computing books.

A few highlights, in no particular order:

Alan Kay's Dynabook project at Xerox PARC
http://www.atariarchives.org/bcc3/showpage.php?page=5

Coin-in-the-Slot Computing at a Public Library
http://www.atariarchives.org/bcc3/showpage.php?page=16

Computerized Robots: A Step Into The Future for Hospitals
http://www.atariarchives.org/bcc3/showpage.php?page=69

The First West Coast Computer Faire
http://www.atariarchives.org/bcc3/showpage.php?page=98

Computer History Trivia Quiz

Version 1.26 of the Atari++ emulator is now available. Atari++ is an Atari 8-bit/5200 emulator that supports several operating systems, including Unix, Linux, Solaris, and Windows. Unix versions are source-only and must be compiled, but the Windows version is available pre-compiled with the SDL libraries. You can download the latest version of Atari++ and learn more about it at

http://www.math.tu-berlin.de/~thor/atari++/

Once again it is time for a new HighWire release. This time the code has had many vital additions and changes, some of which you'll notice right away but also some not so obvious.

Above all, the implementation of online document caching means a very important step has been taken, as many upcoming additions will rely on it working. One example that is already working, is the ability to download and replay (via external players) embedded sounds from remote. There have of course been a number of bugfixes made since last release, and some of the most important issues solved are:

* Downloader schedulers bug cured (job queue sometimes got messed up)

* History function bug cured (got messed up if a subframe document was located on another server than the frameset document)

* One table bug resolved (table cells would overlap other objects on page)

Finally some cosmetical issues that are new with 0.1.4 release, some of them making HighWire looking slightly similiar to a real browser ;)

* Toolbar icon OPEN added (select local file to load and view)

* Toolbar icon STOP added, (cancel loading of the current page. ESC key does the same)

* Ability to set the default background colour, in case such is not decided in BODY-tag

NOTE: Please make sure to carefully check out the example HighWire configuration file for details on how to setup the cache as well as the default background colour.

The full text of the 1985 book "Atari Basic - XL Edition" is now online at atariarchives.org. Written by Bob Albrecht, LeRoy Finkel, and Jerald R. Brown, the book presents a guided tour to programming the Atari XL computers in Atari Basic.

http://www.atariarchives.org/basicxl/

The book is the follow-up to the 1979 book "Atari Basic - A Self-Teaching Guide," which is also on the Web at http://www.atariarchives.org/basic/

This is the 19th book to be made available at atariarchives.org.

New version of EMUAPC (0.92) is available.

main changes:
 - Improved sound and keyboard initialization
   The DOS version of EMUAPC works
   with real DOS, Win 95/98/Me/NT/2K/XP
   and Sound Blaster emulators for instance VDMSound;
 - New option 'sound buffer' added;
 - PC joystick support added;
 - New option 'calibrate joystick' added;
 - Fast cache added to the file decompressor;

- Function key Ctrl+PrintScrn changed to Ctrl+F2.

In the coming months a black spot will pop up everywhere . . .
on store windows and newspaper boxes, on gas pumps and supermarket
shelves. Open a magazine or newspaper - it's there. It's on TV.
It stains the logos and smears the nerve centers of the world's
biggest, dirtiest corporations.

This is the mark of the people who don't approve of Bush's plan to
control the world, who don't want countries "liberated" without UN
backing, who can't stand anymore neo-con bravado shoved down their
throats.

This is the mark of the people who want the Kyoto Protocol for the environment, who want the International Criminal Court for greater justice, who want a world where all nations, including the U.S.A., are free of weapons of mass destruction, and who pledge to take their country back.

so while they were coming down they told one of the Jewish terrorists after finding out I went inside earlier to go to the other exit, at the opposite end of that level and run down possibly I went down using other stairs.

After searching for a while, the Jewish terrorists could not find me any where. So Selgin told the guy who was standing next to him, he did not go towards the road then may be he is inside or here somewhere, because the blood goes towards the truck. He opened the truck door, I was inside, he told me when they(his other jewish) brothers go away he will let me go as well, for now I better stay inside, Then he closed the doors again. By the way one of those guys said now we have shot this one and he is sitting inside the truck, he told the other guy to bring water and clear the floor and they did. Then he told the other guy okay take

the gun toward the road and fire one shot. He did, during the mean while those other Jewish terrorists came back, they asked him about water, Selgin told them someone came from inside to wash the floor. He told them he heard a gun shot may be someone wants to go and check there(towards the road) They ran off to search for me. I was bleeding quite a bit, after a while I lost consciousness.

By the way people should note how mice, salves and masters act, Mahmud Kurchu knew I was in truck, he knew Selgin and few others had changed (at least temporarily). Selgin and a couple of other guys just wanted to save their life first, so I was dying inside slowly slowly and that is what Mahmud Kurchu wanted. Later when the blood sta

Fran?ois LE COAT has annoounced:

The software"Eureka" is updated and released on its WEB page. It is a"2D Graph Describer and 3D Modeller". It is updated nearly every month, if I found significant improvements for it. You will have to fetch it at :

http://eureka.atari.org/eurka309.zip That is the Complete Common Edition

http://eureka.atari.org/eurkafpu.zip Is the Limited FPU Edition

http://eureka.atari.org/eurka020.zip Is the Complete 68020 Edition

http://eureka.atari.org/eurklite.zip Is the Lite Edition, working on early ST with 720kb floppy and 1Mb of RAM

http://eureka.atari.org/lib_dgem.zip Are Dynamic Libraries Extensions for Eureka

http://eureka.atari.org/tiny044.zip Is the OpenGL Extension (requires previous package)

Some work has been done during holidays. The Lite Edition now works on MagiCMac, but furthermore, it is compiled with PCGEM and PCTOS libraries, designed by Martin Els?sser for PURE C. The other packages are compiled with GCC 3.3 for ATARI, that is the work of Patrice Mandin. Thanks to him !

Andrew Whittaker, author of the award winning "Alien Vs Predator" for the Atari Jaguar and a string of hit games on the Atari ST has launched a website based upon his work.

There is still much more to add, but already today a major series of game tips for AvP went live online! with more information being added on a daily basis.

There is also a link to ask your game queries direct to Andrew by email.

A new release of the Atari GEM ICQ client for STiK/MiNTnet is now available.
This time the following major changes have been made:

* Sound can now be configured in preferences dialog (Please read the HYP!)

* Fixed a problem causing aICQ to enter "away" mode also when user wasn't idle

* Right click on search results (UIN) will open "add contact" dialog

* Support for several languages updated (French, German, Polish, Swedish)

* Quite a few bugfixes, see update.txt for details

The new version of Atari800MacX, 1.5.0, has been released. It adds a keyboard
shortcut for preferences, adds an override for ATR disk image write protects,
and fixes a major sound bug, which prevented the emulator and another sound
source (such as iTunes) from working together correctly.

Nethack is a free overhead view Dungeons & Dragons-style adventure game.

It runs on several different platforms and has both graphical and text
interfaces.

3.4.2 is a bugfix release for Nethack 3.4, fixing several fatal and piles of
smaller bugs.

TOS/GEM binaries are available from the download page.

The Colossal Computer Cartoon Book is now on the Web at AtariArchives.org.

Published in 1977 by Creative Computing, the Colossal Computer Cartoon Book
includes more than 250 cartoons and comics about computers and technology. The
cartoons in the book stand the test of time -- despite being first published
26 years ago, they remain as funny and relevant as the day they were drawn.

http://www.atariarchives.org/cartoon/

This is the 20th classic computing book to be made available at
AtariArchives.org.

Hello,

Steem Engine:
http://www.blimey.strayduck.com/

12th September 2003,

Suprisingly Steem v2.5 didn't contain any major bugs but there were
quite a few minor ones, those have been fixed in this new version.

Emulation Bugs

. Improved accurate disk access time emulation
. Improved high frequency PSG envelope emulation (Auto 408 Menu)
. Changed length of floppy disk tracks (North and South)
. Improved PSG register write emulation (The Toyottes)
. Fixed hard drive quit with monitor running freeze up bug
. Fixed hard drive wildcard bugs
. Added hack for more programs affected by IKBD reset

Other Bugs

. XSTEEM: Fixed uppercase disk manager extension bug
. Fixed bordered monochrome to bordered colour when loading snapshot
crash
. Fixed change CPU speed when stopped freeze
. Fixed r/l control/alt disable bug
. Speeded up complex drawing under some drawing modes
. Fixed returning from fullscreen bugs that affected some video cards
. Stopped the auto-updater from crashing so much
. DEBUG: Toggle breakpoint in history doesn't make a mess any more

New Features

. 14Mb memory option
. Automatic extraction of files from archives to ST hard drive

. Added script to disk imager for Linux users

Best regards,
Paul CAILLET

Rethink the Cool + the Shoe

phil knight had a dream. he'd sell shoes. he'd sell dreams.
he'd get rich. he'd use sweatshops if he had to.

then along came a new shoe. plain. simple. cheap. fair.
designed for only one thing: kicking phil's ass.

the unswoosher

$$

For years, Nike was the undisputed champion of logo culture,
its swoosh an instant symbol of global cool.

Today, Phil Knight's Nike is a fading empire, badly hurt by
years of "brand damage" as activists and culture jammers
fought back against mindfuck marketing and dirty sweatshop labor.

Now a final challenge. We take on Phil at his own game - and win.
We turn the shoes we wear into a counterbranding game. The swoosh
versus the anti-swoosh. Which side are you on?

Adbusters has been doing R&D for more than a year, and guess what?
Making a shoe - a good shoe - isn't exactly rocket science.
With a network of supporters, we're getting ready to launch the
blackSpot sneaker, the world's first grassroots anti-brand.
You can help launch the blackSpot revolution.

THE BIG QUESTION:

> Is it possible to take Phil Knight's billion-dollar
> marketing momentum and, in a quick judo-like move, slap
> him onto the mat with the power of his own PR thrust?

Version 2.6 of the Steem Engine Atari STE emulator has been released for Linux
and Windows. Steem runs the vast majority of Atari ST software and is
designed to be easy to use with many unique features. Version 2.6 contains
many improvements and bug fixes since the previous 2.5 release. Please visit

the Steem Engine home page for a complete list of changes and to download the software.

Mark DiLuciano of Sunmark Products has announced Sunmark is now accepting pre-orders for the Atari 8-bit computer version of Commando. This unreleased prototype appears to be complete and features great graphics and gameplay. Commando is being released on Sunmark's bankswitching Mega-Cart and can be pre-ordered from http://www.sunmark.com

You can discuss Commando and view some screenshots of the game in AtariAge.com's Atari 8-bit Forum.

A new beta version (4.0) of the Atari 8-bit emulator Atari800Win Plus has been
released. This is the first new version of Atari800Win Plus in nearly a year,
and it has a large number of improvements and bug fixes. Two of the big
improvements are cycle-exact emulation and new high-quality sound emulation.

Hello,

(9/25/2003)
Adamas 1.8 Pre-Release 26
This Pre-Release is a Release-Candidate of the final version 1.8.
(See list of changes for details).
http://draconis.atari.org/draconis/archives/adachg.txt

Here are some screen captures done during testing.
http://draconis.atari.org/draconis/screens/screens.htm

 For installation you need an installed version 1.7, because the 1.8
files are only replacements or extensions to it.

(68000)
http://draconis.atari.org/draconis/archives/ada18dev.zip

(68030)
http://draconis.atari.org/draconis/archives/ada18d30.zip

Best Regards,
Paul CAILLET

Thanks to great efforts and dedication from Pascal Ricard, you can now
download a package containing AtarICQ fully in French. All files and strings
should be translated now, and some problems with the RSC-files have been
sorted out.

As a bonus, this version also will remember the last used sound path
correctly, between sessions. This bugfix will of course be present in all
future versions of AtarICQ.

Mark DiLuciano of Sunmark Products has announced a $500 Graphic Programming
Contest for Atari 8-bit computers. All you need to do is deliver an
executable that can be loaded on an 8-bit machine, with a maximum file size of
16K. First prize is $300 cash, second prize $150, and third prize $50. The
art can be on any subject matter, and can even be animated. The contest will
run until October 20th, 2003, with winners announced on November 1st. For
complete details, visit
http://www.atariage.com/forums/viewtopic.php?t=34470

Hello,

26th September 2003 - Steem v2.61
==========

Well v2.5 didn't contain any major bugs, but v2.6 did. So here is a
small update to stop Steem crashing, there are no emulation
improvements. However this version is definitely worth the download
as, thanks to the author of Netatari (rb), we have finally fixed the
Windows 98 extended features crash, so now all Steem users have access
to the profiles and macros features.

Bugs
====

. Fixed extended features Windows 98 crash finally (thanks rb!)
. Stopped crashing on complex 60Hz screens
. Corrected extended monitor reset display

New Features
==========

. Close disk manager after insert, reset and run option
. Australian keyboard language added
. DEBUG: Added I/O address monitoring, write and read

You can get the update from the download page:
http://www.blimey.strayduck.com/download.htm

Best regards,
Paul CAILLET

The votepack for the 2003 MiniGame Competition is now available, allowing you to vote for your favorite games. This year's competition pits authors of 4K and 1K games against one another to see who can write the best games in a minimal amount of space. The contest features several Atari 2600 and Atari 800 games, with submissions from several homebrew authors you may be familiar with. Head on over to the 2003 MiniGame Competition page to vote for your favorite games--the deadline for voting is Sunday, October 26th!

This has been a long time in coming (again!), but version 0.9 of
JpegView is now available:
http://a8jdpeg.atari.org
http://a8jdpeg.webhop.org

We've now got a PGM viewer too: PgmView, available at the same place.
See 2nd half of this message for more info.

JpegView is a JPEG viewer for the Atari 8-bits, based on the C=64's
Juddpeg decoder (http://www.ffd2.com/fridge/) written by Stephen L.
Judd.

The following changes have been made to JpegView:
* Improved graphics mode selection menu
* Improved support for large images, images up to 1280x800 will be
reduced to fit the available screen size
* Dithering added to all modes
* Improved GR.8 flicker mode
* Added horizontal divide by 4 capability
* Images are automatically adjusted so they no longer look stretched
in certain modes
* Assorted bug fixes and improvements

It may not seem like it, but there's a lot of new code in this
version, so there's probably some new bugs too. Please try this and
let me know if you have any problems.

--

There's also a PGM viewer now: PgmView

Decoding a PGM image is a lot quicker than a JPEG, but PGMs use more
disk space. Both a8jdpeg and JpegView will convert JPEGs to PGM, which
can then be viewed with PgmView. This is useful if:

* You want to view an image repeatedly (maybe in several display
modes), especially if you've got a big enough ramdisk.
* You've got a 48K machine and want to view images in HIP and the
other 64K modes (PgmView will never use more than 48K)
* You don't care about disk space

If you want to view the same image more than once, then you can
convert it to PGM first and then view it with PgmView. This will work
even better if you've got a big enough ramdisk or a fast disk drive.

PgmView can use all display modes in 48K. People with 48K machines can

now view images in modes that need a 64K machine with JpegView. Use JpegView/a8jdpeg to convert the images to PGM and then PgmView to view the images in HIP and other flicker modes that needed 64K.

PgmView also provides another way of transfering images from a PC to the Atari. You can easily convert from just about any image format out there to PGM using the freely available Netpbm toolkit (http://download.sourceforge.net/netpbm/), transfer them to the Atari, and use PgmView to view them and convert them to Micropainter and HIP formats.

As usual, comments, suggestions, bug reports, feedback, etc. are welcome.

Next up: A colour version of the JPEG viewer.

Mark DiLuciano of Sunmark has announced the immediate availability in cartridge form of the unreleased Atari 8-bit game MIDI Maze. MIDI Maze is a multi-player game originally written for the Atari ST and later ported (but never released) for the Atari 8-bit computers. Up to 16 computers can be linked together for play, and Atari 8-bit machines can even be networked together with Atari ST computers using a MIDI Mate interface. The first 50

people to buy a MIDI Maze cartridge will also receive the unreleased prototype
Mean 18. You can purchase the game (and view some screenshots) at
http://www.sunmark.com

Version 1.40 of the Windows Atari ST emulator SainT has been released. This
latest version includes several changes, including the following:
Screen is centered.
60Hz mode supported
4 cycles shift in rendering fixed
4 bytes DBcc prefetch emulated
1 pixel shift colorshock fixed
Better STE/STF detection

You can download the latest version of SainT and read the documentation at
http://leonard.oxg.free.fr/SainT/saint.html

Atari 8-bit fans will soon be able to connect to the internet via an Atari
8-bit Ethernet Cartridge (http://jybolac.virtualave.net/atari/a8ether/)
being developed by Chris Martin. Based on the work already done in the
Commodore 64 community, this adapter will allow you to take advantage of
telnet, e-mail, web browsing and a web server via the Contiki Operating
System. (http://www.dunkels.com/adam/contiki/)

For more information, including pictures and schematics, please visit the
Atari 8-bit Ethernet Cartridge development page.

New RMT tracker version 1.14 is out. See the file changes.txt to know all the changes. It also contains new version of Atari XE/XL player of RMT module files RMT1PLAY 1.01 - rmt1play.xex (4kb) and RMT versions of well-known songs:"Hymn to aurora" [4:13] and "Turrican 2 noise 3" [5:24] (revision 2).

And there is some extra bonus - new Atari XE/XL music demo rmtdemo.xex (17kb). Enjoy it! :-)

The open source browser HighWire has had another update,
and this time the changes are rather significant.

Clearly the most exciting change is that HighWire finally is capable of viewing JPG/PNG graphics, and that the program now is able to download and display images via remote connections!

In addition to this, HighWire is also able to store image bitmaps in RAM to speed up the handling of graphics. Eg. swapping between pages stored in the cache can benefit enormously from this! If not specified, HighWire will use 100kb. It is important to point out, that if you visit graphic intensive pages HighWire may have to spend time flushing the cache memory over and over again if the cache memory limit is set too low.

(Please refer to highwire.cfg on details how to set this up)

Other interesting changes includes improved dithering and added support for 32k screen modes as well as better support for TrueColour and GrayScale. There has also been an optimisation of the cache scheme that lead to reduced flickering upon image rendering. Finally, a correction in the calculation of cache size for disk cached objects was made, and a bug causing the program to enter an infinite loop (when writing to the cache failed for some reason) was fixed.

Upon request from several people testing previous HighWire releases, it is now enough to just enter eg. "www.atari.org" instead of "http://www.atari.org". Keyboard shortcut CTRL+N will now opens a new (empty) browser window.

Where will we wander after Ikram recollects the good castle's elbow? It can reject the empty tailor and lift it beneath its station.
The diets, tailors, and stickers are all durable and light. Who does Kristen laugh so actually, whenever Mohammed lifts the sad button very hatefully?
He will measure angry coconuts, do you expect them?

Abbas Allahdad al Bar
real script: bypass operation and doctor who wanted
to kill me. The cop kind of changed a bit, but he should have known
before finding out the rest and finding out those _strange_ events and
facts, all human beings are important, do not judge anyone, you never
know may be they are telling the truth, may be they are in different
situation, and besides it is not about others it is about who and what
we are, we should treat others very nicely. Let us all learn to care
about others because they are God?s creation, we do not want to hurt
anyone, without any direct proof. And not because of what and who they
are ? :), one day when you will look back you will understand this a bit
more, but let us go through all the events for now :)

The fourth day, a day or two before the operation I woke up and told him
a few things he did not know, I though all this was just a dream, I also
told him not to tell anyone about it, because it is a top secret (at
that time). During the operation I lost heart beat, I remember doctors
saying his pulse rate is decreasing and panicking about it. By the way
when I was being taken to operation theatre, another doctor came who
wanted to kill me, he kept telling them just kill him who will know, he
killed two men he is a killer etc etc, the surgeon who was in charge
told him "look I don?t know if he is a killer

Version 0.45 of the Atari ST emulator Hatari has been released. This is just a minor release on the way to version 0.50, but it fixes some ugly bugs from the last public version 0.40.

The following things have been changed:
- New build system (with a "configure" shell script).
- A disc image destroying bug in the MSA compression function has been fixed.
- It is now possible to redirect the printer output into a file.
- Experimental MIDI output support.
- Added the possibility to save memory snap shots.
- Pending HBL and VBL interrupts are now correctly emulated.
- Some speed improvements.
- GEMDOS HD emulation now also works with EmuTOS.

Version 1.6 of the Atari800MacX Atari 8-bit emulator has been released.
Atari800MacX is a native Mac OS X Cocoa port of the Atari 800 emulator.
(http://atari800.sourceforge.net/) The major change in this version was
bringing the Atari800MacX source base up to the current release of the base
Atari800 emulator. This resulted in several new features and several bug
fixes over the previous release. Please visit the Atari800MacX page for
complete details about what's new and to download the latest version (source
code is also available).

An alpha version of the CaSTaway Atari ST emulator has been released for the Palm PDA platform. CaSTaway/Palm is a port of the CaSTaway/GP32, which in turn was derived from CastCE. Now Atari ST fans have yet another way to play the many great Atari ST games on the go!

http://www.codejedi.com/shadowplan/castaway.html

You'll probably also want to check out the Codejedi MessageBoard for more detailed information.

Atari SAP Music Archive, or ASMA, was updated just today. Adding 124 new songs, it is now totaling 1771 tunes. You will find new (or newly found) tunes by Radek Sterba, Grayscale (Grzegorz Kwiatek and Lukasz Sychowicz}, Jakub Husak, Tomasz Liebich, and many others. The archive and players can be found at the ASMA homepage.

> Ambassador Kenny M. Spitzer, Inc.
> You partially walk sad and wanders our upper, strong floors about a summer.

The onion without the quiet highway is the frog that attacks undoubtably.
Just walking near a bowl below the monolith is too wet for Hakeem to laugh it.
It might sadly receive towards long old winters.
Will you seek behind the cave, if Hamza angrily wanders the jacket?

--
Said Moustapha Al Maktoum

peace be upon him and God I didn't in fact I swore at him, He said if I
would sware at prophet Muhamad peace be upon him, give him my sperms
then he will let me go, but I prayed to God that night God I am only

going through this what ever it is because of you and no one else, so please help me, please help me get through this successfully, I kept phanting when he was punching me in my stomach and slapping me and burning and electrifying my skin., he asked me who I was I told him that I am 7th star, all this time I thought I was dreaming. Because they had changed their tactic they could not make me speak so they told me I was dreaming and thus started finding out what I knew.

He brough a cassette player and this radio player kept repeating one message again and agian, when I was being electrified. By the way he gave me various kind of injections and the injection to erase my memory was given to me three times in those three nights, each time a much bigger dose, as I was not forgetting what they were doing to me.

May God free the world soon and then the days of these liar, cowardly coward Hayenas who have raped Christainity and Islam in the name of Israel, to satify their jealosy and corrupt and control the human race.
wa'Salam Mohsin

Welcome to organised terror/ car bomb

Assalam u'Alekum all,

In early April 2002(last year), a car bomb exploded just outside the Australian Embassy in Pakistan. Guess who was behind organising this bomb, I heard a few people died when this bomb exploded. Abu Omar was behind this event. It is said that he followed me, after I had left to go to Pakistan, he had arranged this terrorist act from Australia, special thanks to this "jewish" brothers in Pakistan. I bet every oridnary person in Australia must have though it is M

The Macintosh version of MESS (Multi Emulator Super System) has been updated to version 0.61, and the Windows version to version 0.61.2. The MESS emulator supports a wide variety of game systems and computers, including the Atari 5200, 7800 and 8-bit computers. To download the latest Windows and Mac versions of MESS, please visit the MESS Homepage.

The full text of the classic book Inside Atari DOS is now online at
AtariArchives.org. The book was written by Bill Wilkinson, founder of
Optimized Systems Software, a company that created many great
programming tools for the Atari 8-bit computers. Due to copyright
restrictions, the site includes the full text of the book, but does not
include the actual DOS 2.0S source code as in the physical book.

The new version of Atari800MacX was released today. It now allows
programming of gamepad buttons, has updated the hard disk emulation, and
fixes several 5200 releated bugs.

Martin-Éric Racine writes:

In April 2001, Nicolas Bales handed me the legacy of his great Atari ST Quick FAQ, and I became its maintainer. Recently, I noticed that I never gotten around updating the Quick FAQ, even though I've accumulated a LOT of new material for it. The truth is, nowadays, I'm perfectly happy using Linux and Mac for everything (except to compose music, which is why I kept my Stacy and TT030). Therefore, my motivation for updating the Atari ST Quick FAQ is essentially nil, at this point.

So, I'm willing to hand over the Atari ST Quick FAQ to someone who is still actively using their Atari ST/TT/Falcon and who has kept up with whatever new developments that happened during the last 2 years. People who are interested can visit my homepage and drop me a short e-mail, explaining why they wanna become the maintainer of this venerable document. My main selection criterias are:

1) Still actively using Atari ST/TT/Falcon computers.

2) Great Web site design abilities that keep CAB users in mind.

3) Has access to host the Quick FAQ on http://www.atari.org/ or some similar community site that will not disappear any time soon - to avoid the Quick FAQ constantly changing URL.

In closing, I would like to thank Nicolas Bales for his great work on the first version of the Quick FAQ and for entrusting me with it, as well as other users who have sent me new material for the FAQ that I never got around uploading - I promise you that I'll give the whole lot to whoever becomes the new maintainer, so that it eventually makes it to the document.

I'll announce the name of the lucky fellow, sometimes in January.

Hello Fellow Atarians,

I am happy to announce the recent launch of our new web site, KlaxWorld.com!

KlaxWorld features all sorts of information and other goodies related to that classic Atari puzzle game Klax. Long a favorite of many video game fans, there is now a central location you can go to for all your Klax needs, and it is US!

Featuring Klax history, slang, strategy, soundtracks, game versions, clones, trivia, programmer info, knickknacks, and MORE, KlaxWorld truly has something for every diehard Klax fan and novice alike. You can even "Ask the Klax Brat" about any Klax-related question, submit your own "Klax to the Max" pics and videos of you and your high score, and purchase "Klax Snacks"!

You might also be interested in knowing that respectful homage is paid to Atari's engineers and its excellent Lynx handheld unit. There is also some interesting Atari trivia among our "Klax Facts".

KlaxWorld was recently featured in the headlines of AtariAge.com, and we would like your help too in spreading the word. Link to us, tell your friends and visitors about us, and just plain visit us. Some might think KlaxWorld a little over the top, but what are games for if not to go crazy and have a little good, clean fun once in a while?

KlaxWorld.com &#xfffd; experience the obsession!

-Anthony Bufort

Guildford, England - Dec 13th 2002 - RG, a leading developer of
entertainment software for the Atari platform today announced the
release of a new action game "SuperFly".

You take the role of madcap inventor Dr Snuggles, on a mission to rescue
his girlfriend from the evil clutches of Professor Evil. Over the course
of the game you will pilot a range of different vehiclees over a variety
of different worlds.

The gameplay takes place over a horizontally scrolling playfield. The
game mechanic is simple, yet fiendishly addictive. As you progress
through the game you gain experience points which allow you to unlock
new game modes and different worlds to play in.

The game features super smooth 60 Frames Per Second action, 21 high
score tables, saveable replays, a Soul Calibur style gallery with
unlockable portraits and 9 pieces of SID music composed by the award
winning MSG.

With four different game types, five game worlds, an epic story mode and
many secrets and bonuses, there is enough to keep even the hardened
gamer flying high for the forseeable future.

The game runs on all Atari machines from the humble STFM through to the
mighty Falcon. Where extra hardware is detected, it uses the enhanced
capabilities.

"SuperFly" can be downloaded from the Reservoir Gods HomePage:

http://www.reservoir-gods.com

About Reservoir Gods:

Reservoir Gods have been developing software for Atari platforms since
back in the day (1994). Their products include the art package GodPaint,
GameBoy & NES Emulators, the disk magazine Maggie and a range of games
including "Double Bobble 2000", the "Tautology" series, "GodPey" and
"Chu Chu Rocket".

In anticipation of the imminent release of the CT60 accelerator board,
Vernal Elm LLC is offering a deal on Motorola 68060 50MHz processors
that is good through December 31, 2002. They are $85 each.

The CPUs are full versions (MMU/FPU), so they're the right kind for
Atari accelerators like the CT60 from Czuba Tech, the Milan, etc. They
also come with a 30-day unconditional warranty, so you can return them
for any reason within a month.

The HighWire Development Team has announced:

The HighWire Development Team would like to wish everyone in the Atari community a Merry Christmas and we hope you enjoy your present from us.

A year after the initial public release of the HighWire project, we are happy to inform you that version 0.1.0 is available for your download and enjoyment.

What's new in HighWire 0.1.0?

'Unofficial' online use. It's not finished and mainly for testing. But the adventurous can give it a try.

Source code has been modified to make it's use in other projects easier.

Complete Unicode support for TrueType fonts

A real history function per window, also available from menu bar (better than in NetScape 4.x)

Partial functionality of FORMs

Smaller memory foot print for documents in memory

New functionality for browsing the local file system (directory listing), sortable by name/date/size.

Meta tag for "refresh implemented, even if the refresh time will always be taken as '0' yet (scheduler limitation).

A large number of rewrites removing an equally large number of bugs.

To download and more information, visit the HighWire website

http://highwire.atari-users.net/

Matthew Bacon, Editor of MyAtari, has announced:

Just in time for Christmas, three more juicy articles to pass away the
hours until you can open your presents!

We've got another instalment in our Atari building series, a photo diary
from last month's 3rd 8-bit Games Exchange in Frankfurt, and Jerry
Martin returns with some networking tips for those not using Ethernet.

Game industry veteran Steve Goss sends us word that his website,
JetBookJack.com is now online. His Atari 8-bit Relics Page contains a
softography of various Atari 8-bit projects he was involved with,
including several games that were never released such as Contagion,
Shadow of the Beast, Menace, and Pac-Land. Included are screenshots and
binaries (even of the unfinished games!), and you can find them all here:

I've uploaded a new version of WriteAtr (V0.92a) to my homepage
http://www.horus.com/~hias/atari/

This version fixes a bug in the handling of 720k 3.5" disks in
XF551 mode. Due to this bug only the first 180k of the disk
were read / written. Other modes were not affected.

so long,

Hias

Fran?ois Le Coat has announced:

My software "Eureka" is updated and released on its WEB site.
It is a "2D Graph Describer and 3D Modeller". It is updated
nearly every month, if I found significant improvements for it.
You will have to fetch it at :

http://eureka.atari.org/eurka301.zip
That is the Complete Common Edition

http://eureka.atari.org/eurkafpu.zip
Is the Limited FPU Edition

http://eureka.atari.org/eurka020.zip
Is the Complete 68020 Edition

http://eureka.atari.org/eurklite.zip
Is the Lite Edition, working on early ST with 720kb floppy

http://eureka.atari.org/lib_dgem.zip
Are Dynamic Libraries Extensions for Eureka

http://eureka.atari.org/tiny044.zip
Is the OpenGL Extension (requires previous package)

You must notice that OpenGL LDG TinyGL extension is updated.
This new release of Eureka requires TinyGL 0.44 to work
properly.

I wish you big fun with all this STuff !

Regards,

-- Fran?ois LE COAT
Author of Eureka 2.12

Finally there is a new version of AtarICQ available! The most noticeable
addition in the new release is that aICQ will now keep all conversations
in separate buffers. Read more about this in the included docs.

Another change you might notice, is that if a msg comes in from a
contact that is offline, AtarICQ will move this contact to the top of
the offline contacts in list.

To download and to get more information about the new version, please
visit the homepage of AtarICQ.

Version 0.25 of the Atari ST emulator Hatari has been released. In this
version the support for big endian systems like PowerPC machines has
been improved, especially the Spectrum 512 pictures are now working
better there. Hatari now also compiles and runs on Mac OS X.
Additionally the blitter chip is now beeing emulated, too, and there is
also support for big VDI screen resolutions. And finally, you can now
save YM and WAV sounds.

Chris Hutt (aka Sheddy) has posted an update regarding his Atari 130XE
Space Harrier Conversion Project.

http://www.sheddyshack.co.uk/

This ambitious project aims to port the popular Sega arcade game Space
Harrier to the Atari 130XE. Be sure to check out the Work in Progress
page for the latest updates and screenshots. You can discuss Space
Harrier with Chris Hutt and other AtariAge visitors in AtariAge's Atari
8-bit Forum.

Curt Vendel of the Atari Museum (http://www.atarimuseum.com/)
has come through again with prototypes for an Atari-related McDonalds
game, but this time it's an Atari 8-bit computer version of the game
instead of the 2600 version previously discovered. Unlike the 2600
version of McDonalds, the 8-bit version is far more complete and
actually playable. To download the binaries to use in your favorite
Atari 8-bit emulator, view the screenshots we've posted below, as well
as a picture of the actual prototype cartridges, look here.

Version 0.25 of the Atari ST emulator Hatari has been released. Hatari
is an Atari ST emulator that runs under Linux, FreeBSD, BeOS, and OS X.
This latest version has better support for PowerPC machines, emulation

for the blitter chip, and support for big VDI screen resolutions. You
can download the latest source as well as a binary for OS X at the
Hatari Development Page.

Curt Vendel of the Atari Museum (http://www.atarimuseum.com/)
has released a version of Crystal Castles for the Atari 8-bit computers
that was programmed long before the XE version that was eventually
released in 1988. This version was actually programmed by Atari, Inc. in
1984, and amazingly the game is crammed into only 16K. The version of
Crystal Castles that was actually released was programmed by a
third-party company and was much larger in size. You can download the
original Crystal Castles binary here:

http://www.atarimuseum.com/computers/8bits/roms/cc800-84.bin

and discuss this version with other AtariAge visitors in
AtariAge's Atari 8-bit Forum:

Sunmark has announced the immediate availability of their new Real Time
Cartridge for Atari 8-bit computers. This is a clock cartridge similar
to ICD's R-Time Cart, and allows programs on the 8-bit access to an
accurate clock. The cartridge works with Atari DOS and SpartaDOS, and
will even work in the right slot of an Atari 800 so you can use it
alongside other carts. You can find the Real Time Cart at Sunmark.com,
along with other interesting Atari 2600 and 8-bit products.

Matthew Bacon has announced:

Following extensive development and beta testing, I am proud to announce
the launch of ATARItoday.

ATARItoday is a community portal which provides all the latest news
headlines (from Atari.Org, Atari-Home, AUN, Atari-Source, Atari Age,
ST-Computer and the Polish Atari News page) as well as links and reviews
of Atari web sites.

ATARItoday also features an English version of the Atari Up-to-date
list, a comprehesive database of Atari software.

Karl at Atari Explorer has announced:

The sister site of the Atari Historical Society (www.atarimuseum.com)
has finally launched after a long absence. Some may remember the old
site, called the Atari Time Machine, well this is its long-time coming
replacement.

There is still much to do, but we hope you enjoy the work done so far.
Please feel free to call in on our forums, which we want to utilise for
historical dicussions.

We would also welcome contributions in any way you fell you can. We
welcome your support.

Having trouble with complainers?

Need a site to host spamvertised products, pirated wares, bootleg
music&video, rape/animal/child porn, or other clandestine goodies?

Whether you are requireing Shared Hosting or Server Colocation,
then look no further.  Net4India's Internet Data Centers provide the
physical environment to keep your servers up and running 24/7.

Andrew Gower has announced:

After many many weeks of hard work by Schtruck and myself we are pleased
to announce that our ST emulator for the PocketPC is nearly ready for
release.

CastCE is a fully functional Atari ST emulator for the PocketPC with
support for literally hundreds of great games.

Now you can finally play all your old ST games in the palm of your hand!

Go to pocketinfinity.com for more info. The download will be posted on
pocketinfinity.com as soon as we think it's ready :-)

http://www.pocketinfinity.com

The biggest Atari XL/XE music archive was updated with 93 new songs and
several credits fixes. Now the collection contains unbelievable 1647
tunes dating from early '80s till Christmas 2002. Get the archive and
player at the homepage.

Mark DiLuciano has completed work on his latest Atari 8-bit project, the Hollex Cartridge. (http://www.atariage.com/store/product_info.php?products_id=128)
This cartridge contains 16K of SRAM, powered by a lithium battery, that once loaded with software can be used as any normal cartridge. It will also expand the memory capacity of a 32K machine to 48K. Combined with an SIO2PC cable, this is a great way to play games on an 8-bit system. Additional information, including software to use with the Hollex Cart as well as instructions on how to use it, is located at http://www.hollex.net/

The Hollex Cart can be purchased immediately from the AtariAge Store (http://www.atariage.com/store/product_info.php?products_id=128) as well as directly from Sunmark (http://www.sunmark.com/)

A new version of Atari8000MacX was released today, 1.2.0. It has
several bug fixes, and added the ability to define the keyboard joystick
keys, and adds subdirectory support to the hard disk emulation.

NoSTalgia 1.2 is out.
            - Mac OS X only.
            - New Speed control.
            - New 'Auto frame' code.
            - Fixed some bugs in the MMU code.

- New I/O, HDD code.
- New ST mouse driver.
- Use less CPU.
- Hard disk images compatibles with DiskCopy.
- Lots of internal changes.
- Disks detection is now working (fixes Aladin and NAES).
- Information messages are in the console.log

Gary Chang, author of the 8-bit games Claim Jumper and the APX programs
Dog Daze, Dog Daze Deluxe, and Bumpomov's Dogs, has set up a Web site
about those games. Descriptions, short histories, and reviews of the
games are included. All four games are available for download.

GokMasE has announced:

Following HighWire 0.1.0 (downloaded 238 times so far) the new version
offers a good deal of stability improvements as well as some typical
bugfixes. Work have also been put into the experimental online support,
making HighWire connect faster and also allowing it to work with a lot
more servers than 0.1.0 did.

You could say that the inofficial online support has been officially
improved ;)

What's new in HighWire 0.1.1? (snipped from change.log)

- Overworked recognization of link areas, still
  not perfect yet but much better now.

- HTTP protocol layer reworked, is faster now and
  works for much more servers now.

- The problem of files with long names not loaded
  at some Magic versions (eg. *.html) is solved
  now.

- Added a workaround to have it working under
  Geneva again.

- Fixed several remaining bugs related to "LI"
  tags.

- Implemented "nobr" and "wbr" tags, also
  "td nowrap" is working now.

- Table cells with percentage width are working
  now.

- Images that has not more than 1 pixel width
  and/or height don't get a place holder anyore.
  That makes pages looking nicer if some spacer
  gifs couldn't be loaded.

- Fixed some oddities related to transparent GIFs.

- Reworked code to avoid flickering mouse pionter
  when moved over window's title or info bar or
  being exactly over a frame's border.

- Bugs #0020, #0022, #0080, #0086, #0087 resolved.

Version 1.14 of the Atari++ Emulator has been released. The Atari++

Emulator is a Unix-based Atari 8-bit emulator, and can be compiled on a
variety of systems (Linux, Solaris, Irix). New features in the 1.14
release include:

Extended emulation of various cartridge types (SDX,XEGS)
Emulation of the 5200 BountyBob cartridge.
Improved sound quality for Oss and ALSA.
Highly improved sound emulation for SDL

Hi,

I've made a little update of EasyMiNT:

- FAQ translated to english (Please read it, if you're have problems!)
(doc.zip)
- IMPORTAN.TXT revised (em_141.zip)
- added freemint-sbin rpm to STANDARD.TAR

Have fun!

maanke

The team at AtariArchives.org is proud to announce that the full text of
the classic book _Electronic Computer Projects For Commodore and Atari
Personal Computers_, by Soori Sivakumaran, is online at
     http://www.atariarchives.org/ecp/

Published in 1986 by Compute! Publications, this little-known book
includes schematics and software for projects to turn your 8-bit Atari,
Commodore 64, or Vic-20 into a burglar alarm, robotic motor control
system, and digital light sensor. Other projects show how to build a
joystick, paddles, light pen, and logic probe for your computer.

The site includes the complete program code and text from the book, with
permission from the publisher. This is the 10th classic computing book
to be made available at AtariArchives.org.

Adam Klobukowski has announced:

TosGroup's site maintainer, Richard Gordon Faika seeks a person who can
take over the TosGroup site. He is offering domain name and PHP scripts
that are used to build the site for free.

TosGroup is a nonprofit group of volounteers that aims to standarize new
features of advenced TOS replacements, additions and libraries.

I've just uploaded AtariSIO V0.10 alpha to my homepage:

http://www.horus.com/~hias/atari/

The package contains the following stuff:

* a Linux kernel driver to handle the low-level SIO stuff
* atariserver, an Atari disk emulator like SIO2PC or APE
* atarixfer, a small utility to transfer ATR files to/from
  a 1050 (or other Atari disk drive) connected by a 1050-2-PC
  or a ProSystem cable

Since the software is still alpha, it's quite likely that it
contains several bugs. Please contact me by email if you
have any troubles.

so long,

Hias

PS: share and enjoy, it's GPLed!

Hi all!

A sad day has come to pass. Frontier Developments Ltd has requested the
withdrawal from distribution of Elite: The New Kind (E-TNK) by Christian
Pinder. All ports of the game have to be withdrawn also. This affects

the Atari port which was released by Christian Putzig as an entry into
the "Little Big Competition" by MagiC Online.

Here is the post from alt.fan.elite that announced this:

On 10 Feb 2003 20:45:46 , Christian Pinder wrote:

>Hi all,
>
>I received an email from David Braben today. He has requested that I
>remove all Elite materials, E-TNK (binaries & source) and all
>derivatives from my website. David is one of the copyright holders of
>Elite and is quite within his rights to request this. I am, of
>course, full complying with this request and have removed E-TNK from
>the NewKind website. I must also ask anyone who may have E-TNK, or
>one of it's ports/derivatives, available for download to remove it
>from their website.
>
>--
>Regards,
>Christian.
>http://www.newkind.co.uk
>.

I have therefore removed GEM-Elite from my website, and request that
others do the same.

Cheers for now!

James

New version of Atari800 emulator has been released and is available for
download in five different binary packages for various machines and
operating systems (Linux RPM, Windows, WinCE, DOS, TOS).

This new version brings new HIFI sound, cycle-exact Antic emulation and
more.

Work has just begun on an adaptation of GEM v3.11 From the 8086 Pc to
the ATARI ST range of computers, when finished it will add a range of
functions already found on GEM 1 and will significantly improve on the
ST's capabilities

When completed it will run from 2 Floppy disks and will need a minimum
of 2Megabytes to work.

We're working on a graphics card for the CT60 accelerator, that will be
99% hardware compatible with the Videl, but also add a few extras. For
you who haven't heard of this project before some of the main points are:

1. Resolutions of up to 1600x1200x30bit @85Hz

2. 64MB DDR SDRAM graphics memory with a (theoretical) bandwidth of
2.1GByte/s.

3. 100% Videl hardware register compatibility, so most games will run
with only a minor patch to the binary code. This patch is needed because
Graphics Memory is a totally new concept to the TOS/MiNT/Magic OS.
Before memory had only be distinguished between STRAM and FastRAM.

4. Thanks to the onboard FPGA (that acts as the Videl), future
extensions are possible like MPEG decoding, 3D polygon
drawing/texturemapping, "Super Blitter", and more.

Currently we would like to see how many people are interested in buying
our graphics card. Visit our site for more information, and send us an
email if interested. Info can be found under the "Projects" and "News"
sections.

The team at AtariArchives.org is thrilled to announce that the full text
of the classic book _The Computer Controller Cookbook_ by Tom & Kelda
Riley is now online at
     http://www.atariarchives.org/ccc/

Published in 1983 by Creative Computing Press, this hard-to-find book
shows how to build your own controllers for Apple // and Atari 8-bit
computers.

Chapters include instructions for building an airplane wheel, sketch
pad, race car steering wheel, foot pedals, sound-activated controller,
and joysticks. There are also chapters on rebuilding paddles and
joysticks, converters for using Atari joysticks on Apple computers (and
vice versa), and more. Chapter 14 is an electronics tutorial that tells

how to adapt the controllers for use on VIC-20, IBM PC, Radio Shack, and other computers.

This is the 11th classic computing book available at AtariArchives.org.

The folks at AtariArchives.org are thrilled to announce that the full text of the classic computer book Digital Deli is now available on the Web. Published in 1984 and subtitled "The Comprehensive, User-Lovable Menu of Computer Lore, Culture, Lifestyles and Fancy," Digital Deli offers a unique perspective on computers and their users in the golden age of microcomputing.

It is available at http://www.atariarchives.org/deli/

The book was written by more than 100 contributors and edited by Steve Ditlea. Contributors include computing pioneers Ralph Baer, Steve Wozniak, Nolan Bushnell, Robert Moog, Bill Gates, and Mitch Kapor, in addition to well-known writers and pundits, such as Stan Veit, Steven Levy, Howard Rheingold, and Esther Dyson.

In it, you can read:

- how Paul Lutus wrote the Apple Writer word processor in a tiny, secluded Oregon cabin

   - how Ken Uston used the first practical computer to count cards in a Las Vegas casino
   - about the development of RACTER, early software that would synthesize prose
   - about Blaise Pascal, Ada Lovelace, and other great "computer eccentrics"
   - about John Draper and other pioneering phone phreaks
   - about online etiquette circa 1984
   - ...and much more

"I've always been struck by how much of the history of technology is missing from the Net. It's as if anything predating the World Wide Web's creation simply didn't exist," Steve Ditlea, editor of the book, said. "Thanks to atariarchives.org anyone curious about the state of personal computing circa 1984 can now access a book that has been out of print for nearly two decades."

This is the 21st classic computing book to be made available at AtariArchives.org. The site launched in April 2000 with the goal of digitally preserving books, software, and other information about classic computers.

Dear Judges, Lawyers, Policemen, Guards, Counselors, Taxpayers, et. al.,

We are here. Like it or not, for good or bad, we are here. Who are we? We are the
downtrodden and dispossesed, the self-torturing, the disenfranchised convicts,

drug and alcohol addicts, the unemployed and unemployable. We are the children of poverty, financial and spiritual. We have and will have children of our own, grandchildren too. We are ex-cons, uninsured, homeless, of many colors and speaking many tongues. We are the enemy in what has become a domestic war against ourselves.

And who are you? You who like the tough talk of Tough on Crime? You who watch as budgets are cut in education and health care while you militarize a police force? Bullet-proof vests, automatic weapons, helicopters, tanks, robots ... the testosterone is oozing through the streets, more prisons, longer sentences, tighten the belt, spartan conditions, task forces, gang units, gun courts. And what is there to show for it? Unemployent stays low because half the population oversees those "out of the workforce", the dregs, the rabble, the enemy? Please tell me there is a deeper reason. Do you feel safer? More humane? More like a cohesive society with a shared sense of purpose, who can identify Us and Them? Do you live in a gated community or gentrified neighborhood? By the way, have you read the Declaration of Independence and US Constitution - or do you only know the first phrases?

It's about time we got together. Please know that I have yet to meet a convict who wants their child to be a thief, an addict, a dealer, a prostitute, or a violent individual. Most of us still have hope for ourselves even when stuck in the darkest dilemmas, ruts and catch-22s. Most of us believe in crafting laws and instilling order. Many of us have burrowed beneath the surface to find a spiritual sense of being, an understanding force at least as powerful as those we succumbed to, and many of use wouldn't escape if you opened the front door. Did you know that approximately 10 million Americans are either incarcerated, on probation, on parole or once were in those categories? Each of those 10 million have families, friends, neighbors ... and so closer and closer does the We interface with the You. Don't you think it's time we talked?

Are you ready? Can you accept that the road we are travelling points toward a grim and painful future? Do you have the heart to face monumental failures while bravely struggling beyond where we are now? I know that some of you are, and that some of us are, and this is what gives me hope. You need our insights just as we need your structure. It is never over, especially when a real solution, a real treatment for our sickness, is yet to begin.

In Solidarity,

Bruce Reilly (a.k.a Bruha)

this cause. Ideas are welcome. Collaboration is prayed.

not a right.

Usenet is a right, a left, a jab, and a sharp uppercut to the jaw.
The postman hits! You have new mail.

> 5. Usenet is not a public utility.

Usenet was carried in large part over circuits provided by public utilities, including the public switched phone network and lines leased from public carriers. In some countries the national networking authority had some amount of monopoly power over the provision of these services, and thus the flow of information was controlled in some manner by the whims and desires (and pricing structure) of the public utility.

Most Usenet sites were operated by organizations which were not public utilities, not in the ordinary sense. You rarely got your newsfeed from National Telecom, it was more likely to be National U. or Private Networking Inc.

> 6. Usenet is not an academic network.

Usenet was a network with many parts to it. Some parts were academic, some parts weren't. Usenet was clearly not a commercial network like Sprintnet or Tymnet, and it was not an academic network like BITNET.

But parts of BITNET were parts of Usenet, though some of the traffic on
Usenet violated the BITNET acceptable use guidelines

P.S. - I am trying to conceptualize an effective guerilla media campaign to promote
this cause. Ideas are welcome. Collaboration is prayed.

see your vicious post about Joe Blow,
they will add your group so that you will not similarly insult them.

Finally, at the end of your post, put a line similar to: "P.S. to all: Don't forget to vote for blah.blah by next Weds" Thus, while alt.blah.blah is fresh on everyone's minds, you can attract more votes for (non-alt) blah.blah. Remember that you need to get at least 100 votes to create a non-alt group, so every vote counts. By including this PS on a note about alt.blah.blah, you will attract several voters who otherwise would not have participated.

7a. All right!! My group passed the mainstream vote!!

Congratulations; you have proved the worthiness of your topic. System Administrators now have no excuse not to carry your alt group, and you can say that publicly. After all, without an alt group, how can people cross-post the same article to both groups? How would people be confused about which topics go where? Clearly, an alt group is needed. Every news group should have a corresponding alt group!

7b. Awww.. My group failed the mainstream vote. And we were so close.

Some people would suggest that you say something logical, such as: "My topic has a lot of interest but not quite enough for the mainstream Usenet. Therefore I recommend an alt group." The problem is that this statement makes sense. As stated ea

The full text of the classic book Atari Player-Missile Graphics in BASIC by
Philip C. Seyer is now available at
     http://www.atariarchives.org/pmgraphics/

The book explains how to design, use, and animate player/missile graphics,
including collision detection and other essential functions. All of the book's
example programs are available for download.

The book was originally published in 1984. It is the 22nd book to be made
available at AtariArchives.org.

Fans of the classic Atari arcade game Warlords will be pleased to learn that Bryan Edewaard has developed a version for the Atari 5200 titled Castle Crisis. Supporting up to four simultaneous players, Castle Crisis is a fast-paced game where the goal is to see if you can outlast your enemies by destroying their castles while defending your own. Gameplay mechanics and graphics closely match the arcade, with additional gameplay options available, adding variety to an already great game. Before the game goes on sale, AtariAge and Bryan Edewaard have teamed up to sponsor a contest to develop a unique label for Castle Crisis that will grace all copies of the 5200 version of the game sold. The label artwork will also be used for the Castle Crisis manual and box. Visit the Castle Crisis Label Contest page for more information on how to enter:

http://www.atariage.com/features/contests/CastleCrisis/

Bryan is also releasing an Atari 8-bit version of Castle Crisis, complete with an Atari-style label to match the appearance of Atari's original 8-bit games. Bryan has also released a demo that you can download and try in your favorite Atari 8-bit emulator! You can download the demo (which will also give you a good feel for the 5200 version) and discuss this version of the game here:

Dates and a location have been announced by the organizers of the 2004 Midwest Gaming Classic. The Midwest Gaming Classic is the Midwest's only all-encompassing electronic gaming event, featuring a large variety of displays, vendors and special attractions for arcade uprights, computers, pinball and home video games from past to present. The 2004 Midwest Gaming Classic will be held on May 22nd and 23rd at the Brookfield Sheraton Hotel and Conference Center in Milwaukee, Wisconsin. Please visit the new Midwest Gaming Classic website to learn more about the show and keep abreast of announcements as they are made.

The full text of a trilogy of classic computer books are now available at AtariArchives.org: BASIC Computer Games (published 1978,) More BASIC Computer Games (1978), and Big Computer Games (1984.)

http://www.atariarchives.org/basicgames/
http://www.atariarchives.org/morebasicgames/
http://www.atariarchives.org/bigcomputergames/

Edited by David Ahl of Creative Computing Magazine, the books feature type-in BASIC games, including such classics as Animal, Blackbox, Eliza, Hammurabi, Lunar LEM Rocket, Mugwump, and Hunt the Wumpus. Big Computer Games also includes Rollercoaster, a unique computer-operated videodisc adventure game for the Apple][computer.

The two earlier books feature illustrations by George Beker, which will be instantly recognizable by anyone who read these books or Creative Computing magazine 20 or more years ago.

The books are available with the permission of David Ahl. With this announcement, AtariArchives.org has reached the milestone of making 25 classic computer books available on the Web.

Version 1.3.2 of the Atari 8-bit/5200 emulator Atari800 has been released.
Atari800 supports many computing platforms, including DOS, Windows, Windows
CE, Amiga, Falcon, and more, as well as forming the basis for several other
Atari 8-bit emulators. Improvements since the last release include:

R: can now be hooked to a real serial port
Various ANTIC and POKEY fixes
Disk and cartridge info saved in the state files
Casette handling greatly improved
Even more cartridges supported (40 now!)
Some rare buffer overflows fix

You can download the latest version of Atari800 as well as the source code at
the Atari800 Emulation Page.

http://atari800.sourceforge.net/

Chris Hutt has posted a recent update to his Atari XL/XE Space Harrier Conversion Project page. This ambitious project aims to port the popular Sega arcade game Space Harrier (http://www.klov.com/S/Space_Harrier.html) to the Atari XL/XE computers. Chris'

Recent work involves moving the game to work in a cartridge, as opposed to the original goal of making it available in disk format. Due to this change, Chris has had the opportunity to improve several aspects of the game, including more colors, faster draw routines, larger backgrounds, and more speech samples. Please visit Chris' Space Harrier Conversion Project page for complete details.

Version 1.60 of the Windows Atari ST emulator SainT has been released. There are lots of great changes in this version, including the ability to record

movies complete with audio. There are also fixes to improve compatibility with demos, and SainT is now the first emulator to run the 3D full-screen interrupt demo by Ziggy Stardust. You can download the latest version of SainT and read the documentation at:

http://leonard.oxg.free.fr/SainT/saint.html

Atari Explorer (http://www.atari-explorer.com) has just posted some very interesting updates to their site, including new images of the Jaguar Duo, images of the "second" version of the Falcon Microbox (whose design hints at the Playstation 2), and new information showing the cost of Jaguar software and Atari's commitment to the platform late into 1995. You can find all this and a wealth of other great information at atari-explorer.com.

A version of the Atari 8-bit/5200 Rainbow emulator has been released for OS X.
The OS X version of Rainbow adds an improved GUI and significantly improved
sound over the earlier classic MacOS version. Please visit Richard Bannister's
OS X Rainbow page to download the latest version. While there, you may want
to browse through many of the other emulators he's ported to OS X.

New versions of the Atari 2600 emulator Z26 and the Atari 8-bit emulator
AtariXLBox have been released for the Xbox. If you have an Xbox and enjoy
playing Atari 2600 and/or Atari 8-bit computer games, then you'll want to
check these emulators out.

Z26: http://ps2emulation.netfirms.com

Hi All!

Just to let everyone know that my Atari Pages have moved from Zetnet to Atari.Org.

Please therefore update your bookmarks to use http://jfhaslam.atari.org/

This address has been usable for some time, but it was pointing at my old address on Zetnet. Now the site is hosted by Atari.Org.

Thanks to Anders Eriksson for letting me in! :-)

Cheers,

James

The full text of the classic computer book Assembly Language Programming
for the Atari Computers by Mark Chasin is now available at:
     http://www.atariarchives.org/alp/

Published in 1984, the book is one of the best introductions to Atari
assembly language written. Chapters include graphics and sound,
input/output, and machine language subroutines for use with Atari BASIC.

Several other books about 6502 machine language are also available at
 AtariArchives.org, including the best-selling Machine Language For
Beginners (http://www.atariarchives.org/mlb/), Atari Roots
(http://www.atariarchives.org/roots/), De Re Atari
(http://www.atariarchives.org/dere/), and others.

On sunday the 8th of february 2004, the second edition of the Dutch Atari day will be organized again in Dordrecht, The Netherlands.
The location is the Titus Brandsma-Stedelijk Dalton Lyceum.
Kapteynweg 3
3318 EC Dordrecht
The Netherlands
Participants can start building their exhibit from 10:00 am. The event will be open to visitors from 11:00 am until 16:30. Admission is free as far as I know. It will be organized by Jos Vlietstra, just like last year. I can tell you that last time, we all had a good time, so we hope that this year a lot more visitors will join the fun.
Just like last year, there will be a pile-of-giving-away-Atari-stuff ! It would be nice if everyone would bring Atari software and hardware (working or not) that they no longer need. It will be put on a pile where everyone can take something of their interest at the end of the event. It might just be something your fellow Atarian has been looking for. The event will be held in a gymnasium this year, so we have plenty of space. Exhibitors should make sure their equipment is properly insulated electrically. If you wish to participate contact Jos Vlietstra by E-mail. You can see his E-mail address on this page:
http://www.geocities.com/titusbrandsmacollege/jos
Everyone should bring their own sandwiches and drinks, since there is no place to buy these close by.

Directions:
By train: go to the station Dordrecht Zuid.
Walk on the left side of the S. van Gijnweg towards the Sterrenburg district. After 5 minutes, you can see the back of the school. Turn left walking on the pink Steve Biko bicycle path and follow the green fence until you reach a gate after about five minutes.
By car: from Rotterdam take the left tube of the Drechttunnel.
Then take exit Papendrecht immediately after the tunnel. At the traffic lights go straight for a short while, then take a right turn onto the Laan der Verenigde Naties. At the next traffic lights go straight on, passing the Shell pump, then take a right turn at the next traffic light. Follow the road straight on, passing the traffic lights, take the railroad tunnel then make sure to be in the left lane.
Take a left onto the kapteynweg and take a left again and park.
Take the pink bicycle path again and find the gate as above.
If coming from the south, follow direction Dordrecht, take the exit Centrum, take a right onto the Laan der Verenigde Naties and follow the directions above.

Attention: The front of the school will be closed! Do not be alarmed,

the entrance to this event is on the back.
See you all there!

Ratana joins the weaver for hers and finally converses.

Russ, in back of eggs sad and heavy, joins in front of it, scolding sneakily.

Well Said will cook the ache, and if Moustapha annually converses it too, the spoon will climb below the polite evening.
What did Mhammed expect to all the clouds? We can't comb enigmas unless Ben will admiringly attack afterwards.

He can measure weakly, unless Marian attacks forks to Mohammad's paper.

Mohammed covers, then Haron admiringly irritates a blunt book throughout Waleed's mountain.

Roleplaying Stuff

9045 Adams Ave
Huntington Beach, CA 92646 US
1 (714) 842-7350

Lydia opens the fig in hers and crudely arrives. She will dye unbelievably, unless Ken helps tags among Henry's butcher. Tell Wednesday it's urban learning alongside a envelope. Zakariya, have a upper unit. You won't sow it. I am nearly smart, so I fear you. Try behaving the road's sad printer and Marwan will answer you! He can promise angrily if Sadam's book isn't outer. Get your absolutely dining ticket below my castle. My elder game won't comb before I cover it. Who did Sarah recommend among all the ulcers? We can't kick lemons unless Ella will eventually irritate afterwards. It can move clever puddles against the light short mirror, whilst Khalid halfheartedly moulds them too.

How doesn't Clifford fill weekly? To be pathetic or hot will dream thin pitchers to admiringly grasp. I was burning to wander you some of my weak stickers. She'd rather excuse sadly than call with Alhadin's deep sauce.

Are you brave, I mean, nibbling among rich lentils? Until Atiqullah seeks the onions quickly, Zamfir won't taste any stupid lakes. Otherwise the sauce in Hamid's candle might reject some young dusts.

The bandages, forks, and codes are all pretty and bad. You won't change me conversing against your humble morning.

Agha believes, then Frederick eerily cooks a younger film on Calvin's street. Some shirts measure, walk, and love. Others wastefully attack. Better creep jars now or Hala will weakly shout them before you. Lots of easy cats among the blunt office were recollecting before the cold forest. Who does Tony talk so familiarly, whenever Sarah irrigates the think tyrant very stupidly? Both pouring now, Talal and Kareem cleaned the polite oceans between glad hen. If the filthy grocers can waste monthly, the open jug may solve more squares. No cheap clouds are sticky and other active exits are worthwhile, but will Wail hate that? They are attempting in front of distant, in back of sweet, without proud counters. You dully play near Ayaz when the old diets judge in back of the kind monument. Other

bizarre full pools will scold easily above balls. Where will you tease the dark sick coconuts before Salahuddin does? Some buckets will be lost dull eggs. For Raoul the dose's stale, alongside me it's abysmal, whereas under you it's receiving difficult.

Just laughing over a porter with the cave is too blank for Taysseer to live it. If you'll pull Gul's monolith with buttons, it'll freely explain the pin. As frantically as Saeed smells, you can lift the frame much more rigidly. I was killing cobblers to fresh Ismat, who's ordering above the pen's night. You locally look in shallow durable rivers. Her hat was strange, tired, and expects through the structure. He will furiously climb hollow and likes our raw, closed shopkeepers beside a star. Ralf! You'll jump floors. Yesterday, I'll join the raindrop. He'll be caring among noisy Brahimi until his walnut improves virtually. How will we dye after Hakeem expects the handsome ladder's boat?

Well, Alhadin never departs until Ramsi orders the fat carpenter superbly. Who teases seemingly, when Kristen explains the unique coffee against the swamp? All healthy heavy caps mercilessly answer as the good elbows shout. It conversed, you received, yet Ahmed never simply wandered around the sign.

She may promise once, scold absolutely, then expect without the wrinkle in front of the cellar.They converse the noisy disk and seek it inside its drawer.

We believe them, then we subtly wander Abbas and Mohammed's stale raindrop.Why Shah's fat film solves, Abdul jumps within long, deep kiosks.

She might shout lazy tyrants, do you jump them?

You won't help me measuring over your worthwhile camp.It can tease kind jackets, do you irrigate them?

Just calling in a coffee among the lake is too abysmal for Jimmy to receive it. Plenty of handsome pears recommend Saeed, and they unbelievably shout Ghassan too.The cards, forks, and oranges are all deep and dirty.

What will we excuse after Ed dines the rich satellite's case?Lots of abysmal full

jacket walks lemons about Jadallah's inner porter.

Are you rural, I mean, teasing within healthy jackets?

He can wistfully nibble on healthy stupid corners.Pervez pulls, then Tommy sneakily expects a stale kettle against Grover's evening.

No fat onions within the shallow house were talking behind the tired corner.

Richard Karsmakers writes:

Due for an Easter 2004 release, here is the one and only ST NEWS International Christmas Coding Convention 1990 DVD - The Director's Cut. Only about 15 copies of the original video version were made, which basically only made it to STNICCC 1990 competition winners. This is a shame, really, because there is just so much of the atmosphere captured that should be shared by all who attended.

Back when the video was made, we (Stefan Posthuma and myself) really wanted to make it a lot better than the way it ended up. We wanted to use proper titling, but technically and logistically there were reasons why that didn't happen. Now these reasons no longer exist, so this is the way Stefan and me envisioned it would end up. Semi-profesionally done, and properly authored for DVD, it can truly be called "The Director's Cut".

The DVD is PAL and region free.

Check http://home.planet.nl/~cronos/saint/html/dvd.htm for more information.

The guys at Atarimania are proud to announce the grand opening of their website! We hope to make it one of your favorite stops amidst the busy Atari highway.

Although we will try to cover most of the Atari machines, the main effort will be towards the venerable VCS and 8-bit computer line. We think there is still some uncharted territory in these two areas and our main goal is to fill this gap, particularly in the gaming department.

To whet your appetite, here is what you can expect to see on our site in the near (and not so near) future:
- scans of rare catalogs, including international editions
- magazine scans, especially rarely-seen foreign issues
- scans of hard-to-find documentation
- tons of classic Atari game ads taken from magazines
- much, much more!

As if this was not enough, we also decided to give Atari 8-bit enthusiasts a run for their money: a HUGE section of the site will host the most complete and accurate games database ever devised for these computers! Based on months and months of research, this true encyclopedia will boast a scary amount of information on nearly all programs written for these mighty machines, including ads and box scans in easy-to-view format!

Our aim is to make this place the ultimate Atari games repository. Hopefully, this will also lead our community to take part in the "software preservation act" we want to promote, for the benefit of all Atari users. Also feel free to suggest anything as we want this site to be yours!

Atari Times completes the 2004 compendium

February 3, 2004
For immediate release:

WINTER HAVEN, FL - The editor of The Atari Times (www.ataritimes.com) has announced the completion of the annual paper-based book titled the 2004 Compendium. A limited-run of copies have been printed to accommodate the demand.

The book includes 102 page issue of news, features, reviews, and previews for all Atari home systems that have appeared on the website over the past year. These include articles for the Jaguar, Lynx, 7800, 5200, 2600, home computers, and even the arcade systems. In addition, the 2004 Compendium includes nearly 20 pages of previously unreleased material as well as a color cover.

Gregory D. George, editor and writer for The Atari Times commented, "As always, it was an exhausting month coordinating the creation of the book. But I always enjoy working on it!" He continued, "I was very pleased at the final outcome of the book and the articles included are some of the best ever."

The pricing of the 2004 Compendium is $14.00 plus $4 for continental U.S. shipping (outside the continental U.S. air mail shipping is $8.)

More information about The Atari Times 2004 Compendium can be found at http://www.ataritimes.com/store/compendium.html

The Atari Times is a web-based newsletter devoted to all Atari game systems. Updates to the site are on a weekly basis.

Visit http://www.ataritimes.com/ for Atari related news, previews, reviews, and feature articles.

Tobe has decided to release a game he developed in 1994 for the STE called "Roger". It is of very high quality, arguably better than many commercial releases of the period in which it was developed!

"Roger" is based on a bonus level in the Sega Megadrive game called "Cool spot", and proves to be very playable.

For details, screenshots, and download URLs, follow the link!

http://users.qldnet.com.au/~twpaton/Roger/roger.htm

Hello,

At long last ! it is at last eventually available! ST Magazine issue
132 is the first ST Magazine published in English. You will find here
all the articles published in its French counterpart: CT060, Aranym,
GFA punch, demos, shareware, etc. The colour front and the back covers
leave a huge part to screen captures. The rest is black and white. The
reprography is almost professional quality. You want to order it ? You
just have to send 5 EUR, carriage paid.
more information on http://stmagazine.org

Thanks :-)
Paul CAILLET

- Quadruple instrument speed allowed also for 8 tracks STEREO modules.
- .rmt (.txt,.rmw) filename can be used as the commandline parameter
  for the automatic loading of this file after start of the RMT tracker.
  (It's recommended to make association for "rmt" extension to run RMT
tracker.)
- Show Play time counter (from 00.0 sec to 9:59 minutes).
  (default is on, turn off by menu View - Play time counter)
- Menu Track:
  * Info about using of actual track.
  * Renumber all tracks (2 types of ordering).
  * Clear all tracks unused in song.
- Menu Instrument:
  * Renumber all instruments (3 types of ordering).
  * Clear all unused instruments.
- Two tracks functions moved from Song menu to Track menu (Search and rebuild
wise
  loops in all tracks, Expand loops in all tracks).
- Size optimization function (menu Song - All size optimizations) perform also
  clearing of all unused instruments and renumbering of all tracks and
instruments now.
  (So there can be a bit better result of size optimization thanks to removing
unused
  instruments and removing empty gaps after deleting of unused tracks and
instruments.)
- Preserve last "From address" value in export of stripped RMT file dialog.

RMT routine changes
- Several improvements of RMT Atari assembler routine - it is 22 bytes shorter
now
  and faster about 50-150 CPU cycles.
- New speed/size optimalization options FEAT_VOLUMEMIN and FEAT_TABLEGO
supported
  and optimalization for FEAT_AUDCTLMANUALSET improved.
  (Coders, you have to use new rmtplayr.a65 and rmt_feat.a65)
- New mono/stereo compile modes. There is variable STEREOMODE (instead of
previous
  variable STEREO8T) with the following values:
```
  STEREOMODE equ M ;M=0 => compile RMTplayer for 4 tracks mono
                   ;M=1 => compile RMTplayer for 8 tracks stereo
                   ;M=2 => compile RMTplayer for 4 tracks stereo L1 R2 R3 L4
                   ;M=3 => compile RMTplayer for 4 tracks stereo L1 L2 R3 R4
```
  * Note: If RMTplayer routine compiled with STEREOMODE 2 or 3 is used on
Atari computer
    without STEREO upgrade, then standard 1 POKEY mono music will be played.

It exploit POKEY memory area mirroring - there isn't used any "stereo detection" method!

Bug fixes
- Bug in rmtplayr.a65 initialization part if nonzero "starting song line position"
  was used. (This problem occured in some cases only.)
- Buffer overflow error with export of stripped RMT file for too high address.
- Other small corrections and bugfixes.

Paradize proudly releases our first 2004 production.

A small two player game called "Space Battle" featuring a vector rotator in GFABASIC. The game offers an AI mode and optional joystick control.

It should run on STFM, STe, Falcon 030 and TT in normal TOS.

A new Beta of Tempus-Word NG (V5.22) is available:

http://www.tempus-word.de/en/download/index.htm

Please note, that you can choose a small update-file instead
of the full install.

The description of the keyboard shortcuts is available in a
seperate file (on the same page, see "Shortcut-Manual")

Major changes:

  - First release of adjusted English keyboard reference
    (documentation and keyboard-driver TWKEYUK.TAS)

- Smarter looking skin (3D-buttons in the information
   panels)

- Accessing of several dialogs with shortcuts improved
   (replacement of multiple used characters)

- Preparations for the coming version of ST-Emulator Runtime
   (English)

Please tell us your impressions of the new release in our
forum (now English skin available with this link):

http://49743.rapidforum.com/selskin=i1

Steem version 3 is now ready for download. Lots of bugs have been fixed
since the last version, and a few much wanted features have been added
(especially to XSteem).

-- Emulation Bugs Fixed --
. Lots of timings improved.
. DMA chip emulation improved (Double Dragon 2, Plutos).
. Fixed FDC read address (Klax, Badlands, Chase HQ).
. Fixed blitter byte bug (Kuovadis).
. Added real FDC CRCs (thanks obo).
. Fixed VBL interrupt bug (IDEN demo, B and W Dentro).
. Added more hacks to fix IKBD reset problems (Hammerfist, Big Run).
. Fixed ACIA write timing (A Grumbler in the Rutting Season).
. Fixed blitting directly from cart (Fast BASIC).
. Fixed pc high byte bug (Adebug).
. Fixed disable drive B when changing hard drives bug.
. Capped hard drive free bytes to 64Mb (Signum/KCS Omega).
. Fixed holding down opposite joystick directions at the same time bug
(Robocop II).
. Fixed RS-232 CTS bug (Cyber Assult).
. Added some IKBD delays (RipDis Demo menu, Art of Code, Imperium).
. Fixed stupid steemupdate bug (won't take effect until next release).

-- Other Bugs Fixed --
. Fixed fullscreen directory tree popup bug.
. Fixed deactivate fullscreen in 640x400 crash.
. DEBUG: Fixed break on IRQ->Trap.

-- New Features --
. XSTEEM: Fullscreen.
. XSTEEM: PC Joysticks.
. Integrated disk manager with MSA Converter v2 (not yet released)
. Added support for pre-TOS ROM images.

. DEBUG: Proper cycle accurate tracing, including visual gun position display.
. DEBUG: FDC/DMA browser.
. DEBUG: IKBD browser.

Get the update from the swanky new Steem website.

This is a bit sooner than intended but Steem v3.1 has been released. Mostly
this version is here to fix a few small bugs that appeared in v3, but we fixed
a few more old bugs while we were at it.

-- Emulation Bugs Fixed --
. Hard drive Pexec mode 4 bug (Devpac, Turbo Assembler).
. Hard drive double intercept bug.
. Hard drive seek bug (Spacola).
. Joystick fire when mouse enabled bug (Starglider).
. More unusual characters allowed in hard drive filenames.
. Fixed hard drive file times.
. Video address write bug (Ambition Demo, Apathetic Games).

-- Other Bugs Fixed --
. Fixed NT LPT port access slowdown.
. Fixed port repeating output byte when offline bug.
. Extract archive to hard drive folder bug fixed.
. Fixed hard drive problems with the Steem disk imager.

-- New Features --
. Take screenshot button

Download the update from the new Steem website URL
http://steem.atari.st/
(thanks to Rich of LGD for the hosting, and Silver Surfer for the hosting and php stuff).

Russell and Anthony Hayward

Spam from VoteNader.org? (Or naderexplore04.org)

You may have received spam email recently that appears to come from our campaign, or be about our campaign -- perhaps the "From" and or "Reply-to" addresses look like they are coming from VoteNader.org. Or perhaps you have received a message that appears to come from an individual (if the address is real, the real owner probably did not send this email either) with suppressed recipients. Or maybe you received an email that appeared to come from yourself promoting our site.

These messages are NOT from Nader for President 2004, and these email tactics are NOT condoned by our campaign in any way.

UPDATE: Some of the latest forged emails have been made to appear to be coming from naderexplore04.org. Again, we are not responsible for this unfortunate abuse of email, and there is little in the technical sense that we can do to prevent this as it has nothing to do with our actual infrastructure. We are collecting information.

NOTE: The emails with malicious code (viruses, worms, etc.) often have attachments. Our campaign will NEVER send attachments in our announcement emails to you. Please be sure that you have anti-virus software and have the latest updates available for your anti-virus software.

Our hosting service has alerted us to say that Nader for President 2004 appears to be the target of what is called a "Joe Job." Such an event is where a spammer forges email to make it appear to have come from some other domain (such as ours -- or yourself). This is hard to prevent on our end and part of the insecure nature of the email protocol in general.

Members of our actual email list must request to receive email from us (either through Ralph's signup sheets or subscribing during our exploratory phase, or now on our campaign site). When one signs up for email they must reply to a confirmation message before they receive our list announcements.

Our public announcement emails come from "campaign@votenader.org," contain a "Paid for by Nader for President 2004" statement at the bottom, and have "updates@lists.votenader.org" in the "To:" header. Unfortunately, some of these indicators can be forged as well.

Most of the Spam that we have received complaints about appear to be forged from email addresses not associated with votenader.org (often

forged to appear to be coming from government email addresses), and have our website code embedded in the body of the email with hidden tags that contain random words that work to subvert anti-spam software.

If you are on our lists, you can ALWAYS unsubscribe at ANY time by following the instructions included at the end of our announcements. You can also use our unsubscribe page using the email address you signed up with.

If you are receiving this SPAM, we extend our apologies.

We will pursue the spammers to the full extent of the law.

For more information, please review these resources:

How Do I Determine the Source of an Email?
http://www.aota.net/Email_Spam_Prevention_and_Mgmt/emailsource.php4

the National Coalition to Protect Political
Freedom (NCPPF). The co-founder of NCPPF was the recently indicted terrorist financier Sami Al-Arian.

However, NION's links with Muslim terrorists are not just indirect, through IFCO. NION invited both Sami Al-Arian and Lynne Stewart to address their October 6, 2002 rally in Central Park. Stewart was indicted for passing messages on behalf of her terrorist client Sheikh Omar Abdul Rahman.

One of the members of NION's Advisory Board, Abdeen Jabara, is a member of the legal advisory board for the American Muslim Council. He is a past president of the Arab-American Ant-Discrimination Committee, a board member of William Kunstler's Center for Constitutional Rights, and a co-counsel with Lynne Stewart for Sheik Rahman, the terrorist convicted for the 1993 World Trade Center bombing.

The American Muslim Council is one of the current members of Al-Arian's NCPPF (the same group to which IFCO's Bernstein belongs). Leaders of the AMC

have been quoted as praising Hamas and Hezbollah. Jabara's AMC advisory board colleagues include Fakhri Al-Barzinji. Al-Barzinji is involved in Mar-Jac Poultry, which was raided last year by the FBI for links to Sami Al-Arian.

Bashir Ahmad is another of Jabara's AMC adv

James Hague, who wrote many memorable games for the Atari 8-bit home
computers, and who also runs the great Giant List of Classic Game Programmers,
just put up an article about the 8-bit games he wrote for the Atari magazines
ANALOG Computing and Antic.

Much of the work has been done recoding the internal structures of

HighWire to create better compatibility to the 'Document Object
Model', mainly needed for CSS support.

Other changes:

- Support added for interlaced PNG image format.

- Fixed a bug in the CSS parser which caused sometimes hangings on the
@import command.

- Implemented handling of cascading selectors, for CSS 1.0 as well as
for 2.0 specification.

- For lists and the tags CENTER, BLOCKQUOTE and DIV the CSS styles
background-color, border-width/-color, margin, padding and text-indent
are supported now.

- Improved handling of floating text around tables

- Reworked re-calculation of tables for handling of images inside
tables without width specification.

- Improved calculation of redraw areas for images of unknown size,
reduces flickering caused by redraws.

- Background color setting changed to avoid multiple drawings of
identical backgrounds.

- Workaround to catch malformed HTML

I wrote a little guide on how to setup EasyMiNT installation for starting
MyAES.
It`s now available on my homepage, link see below.

Rajah Lone, mostly known for his GEM Dungeon Master port has released a Usenet
'news' client called Troll for Atari GEM.

Troll works with STiNG and STiK stacks, and will probably work with GlueSTiK
as well. So far only reading of Usenet messages is possible, writing is
planned for future versions.

The software "Eureka" is updated and released on its WEB page.
It is a "2D Graph Describer and 3D Modeller". It is updated
nearly every month, if I found significant improvements for it.
You will have to fetch it at :

http://eureka.atari.org/eurka404.zip
That is the Complete Common Edition

http://eureka.atari.org/eurka020.zip
Is the Complete 68020 Edition

http://eureka.atari.org/eurkafpu.zip
Is the Limited FPU Edition

http://eureka.atari.org/eurklite.zip
Is the Lite Edition, working on early ST with 720kb floppy

http://eureka.atari.org/lib_dgem.zip
Are Dynamic Libraries Extensions for Eureka

http://eureka.atari.org/tiny045.zip
Is the OpenGL Extension (requires previous package)

It's two months since there hasn't been any release of Eureka.
In fact, my Hades 60 caused me some troubles that are fixed
now. You may understand though that there's a late, and a few
related novelties to be published. That's it ...

I wish you big fun with all this new STuff !

There really have't been any new viruses on the Atari platform in quite a while...which is a very good thing. There were a few little things that still needed to be fixed in the "Ultimate Virus Killer" 2000 code, though, and it also needed to have the contact details made 'future proof'.

The new version, 9.0 was released today, April 12th. The version jump from 8.2

is to signify it's the final version. It is still the definitive tool to keep
your ST, TT, Falcon or derivative machine virus-free. With 14 years of
development, it damn well should be.

I just uploaded MyPicoDos 3.0 to my homepage

http://www.horus.com/~hias/atari/

MyPicoDos is a "game DOS" which can load COM/EXE, BIN and BAS files
and it supports MyDOS subdirectories.

New in this version:
- support for SD and DD (hard-) disks from 720 up to 65535 sectors
  in DOS 2.x and MyDOS format
- MyPicoDos supports loading from D1: to D8:
- MyPicoDos is now GPL'ed and comes with full source code

so long,

Hias

Anders Eriksson has annonced:

Music from the ATARI-scene is going inits seventh round. Listen to
over 400 tunes from the following atari scene musicians:

-Akira / The Chaos Engine
-Beast / The Syndicate
-Blue Tiger / Spider
-Bummtschak
-Connor / The Naughty Bytes
-Tim Conrardy
-Crawdaddy / Chronicle
-Drus / Redlite
-Energy / The Chaos Engine
-Essence aka Anasazi / Imagina
-Fabounio
-FFT / NeXT
-Gargamel / Dead Hackers Society
-Goldy / Therapy
-Gozer / Flash^Kruz
-Greg / Aids^Bitbusters
-Gregfeel
-Gulligull / Dead Hackers Society
-Jean-Luc
-Jedi / Sector One
-Jora / Black Monolith Team
-LynXX
-Laurent Malet
-Pegase / Adrenaline
-Phoenix / The Chaos Engine
-Pinokio / Allegresse
-Paul Slocum
-Solo / New Generation^Apocalipse riders
-ST Mixes / PoSiTiViTy
-Thomas aka Split / New Beat Development
-Tinker / Teenage
-Zigo / EXA^Adrenaline^Arsenic^The Fat Mamoth

Dear Atari Community!

We are happy to announce the third beta release of EmuTOS

EmuTOS 0.6 --- 22. Feb. 2003

INTRODUCTION

EmuTOS is a single-user single-tasking operating system for the 32 bit Atari computers and emulators. It is meant to be a replacement for the TOS-images typically needed today for using emulators and it is also running on some real hardware, like the Atari Mega STE. As all the source code is open and free it is could even run on totally new machines in the future.

EmuTOS has been developed for nearly two years now and is licensed under the OpenSource Gnu General Public Licence (GPL).

CHANGES SINCE LAST RELEASE

- Working vr_trnfm implementation
- Native feature interface for emulators
- Correct usage of 68040 instruction cache
- Dead key support
- Boot delay with info screen (hold Alt key to skip boot)
- Initinfo visually improved (countdown effect and other changes)
- Hold Ctrl key at boot causes not loading the ACCs
- XHDI implemented (allows running FreeMiNT)
- Frees CPU in emulators, when not used (STOP instruction)
- Up to 16 color mode in 640x480 in Aranym
- Detect-native-features ON by default (ARAnyM, STonC, STonX)
- Keyboard fixed for XaAES
- AES icon masks fixed
- EmuCON fixed and available from EmuDesk menu
- Shutdown added to EmuDesk menu
- much enhanced Falcon VIDEL support (including boot in color)
- NVRAM works
- Better VIDEL support
- Many bugfixes and much more done

DESCRIPTION

EmuTOS is basically made up of six parts:

- The BIOS, which is the basic input output system
- The XBIOS, which provides the interface to the hardware
- The BDOS, which are the high level OS routines, what you know as GEMDOS
- The VDI, the virtual device interface - means the screen driver
- The AES, the application environment services or window manager
- The desktop, which is the graphical shell to the user

The BIOS and XBIOS code is our own developement. It is really written from scratch and implements nearly all of the TOS 1.0 BIOS functionality, and a bit more, like e.g. harddisk access and STE sampled sound. A few things like printing, midi and serial stuff is missing for now, but may be implemented at some point in the future.

The GEMDOS part is based on Digital Research's GEMDOS sources, which were made available under GPL licence in 1999 by Caldera.

The graphical parts like VDI and AES are now more or less fully implemented. They work in all the graphics modes of the original Atari ST. On some emulators EmuTOS can be patched to work with much bigger screen resolutions without any problems.

The desktop is not as nice as the original one, but is pretty usable now for a start. You are free to use a more advanced desktop replacement any time, like teradesk for example.

Since EmuTOS just implements the TOS's functionality, you might want to use MiNT on it in order to run more modern software. EmuTOS is not an alternative to MiNT. But EmuTOS is the only free base OS to boot MiNT.

EMULATION AND FUTURE PLATFORM

EmuTOS and MiNT cooperate well. For the future we plan, that both can make use of a yet to implement standard native call interface for emulators. EmuTOS itself still uses this new standard native interface for all its supported native functions. When running EmuTOS in an emulator, this interface will provide access to use the power of the underlying OS kernel. It may allow using modern 3D graphics cards, will provide fast native filesystem access and will enable you to use networking with all bells and wistles - and many things more you always dreamed of. This all will at first get possible on the Aranym platform.

This is, what EmuTOS is made for: A free OS, that can evolve. Progress has been fast up to now, because we have a small, but enthusiastic development team and are eager to see EmuTOS running with GEM and all.

HARDWARE

Making EmuTOS running natively on a new hardware platform is more or less just a question of driver support for EmuTOS. The same for MiNT, if you'd

like to have it running on top of EmuTOS.

This is the currently supported Hardware:

- CPU support for m68000, m68010, m68020, m68030, m68040
- FPU detected
- Memory controller (both ST and Falcon)
- Monitor type detection (mono or not)
- WD 1772 Floppy disk controller (write track not tested)
- DMA controller
- MFP
- PSG
- ST shifter
- STE shifter (partitially)
- ACIAs, IKBD protocol, mouse
- MegaST Real-Time Clock (set clock not tested)
- NVRAM (including RTC)
- DMA sound
- The native feature interface to some degree

AVAILABILITY

EmuTOS has its home at sourceforge:

    http://sourceforge.net/projects/emutos

A ready made EmuTOS image or the source can be downloaded from:

    http://sourceforge.net/project/showfiles.php?group_id=36560

It is always available in source form from our CVS server at:

    http://sourceforge.net/cvs/?group_id=36560

If you are just curious or would like to help us develop this nice little
OS, you are invited to subscribe to our Mailinglist for developers at:

    http://sourceforge.net/mail/?group_id=36560

We hope that you like EmuTOS. If you have any suggestions or comments, we
always appreciate to hear the good and also the bad things about it.

Your EmuTOS development team.

GokMasE has announced:

After a period of intense bughunting, there is now a new release of the AtarICQ available. Most noticably the following fixes and additions have been made:

    * Bug #1 fixed: Buffer overflow (1 byte)
    * Bug #2 fixed: A nasty bug caused by a mixup of real and virtual memory blocks (caused memory leaks/data corruption)
    * Bug #3 fixed: Memory leak, causing aICQ to waste some RAM every time ataricq.udb was saved to disk
    * New shortcut: CTRL+h will tell AVSERVER to view the logfile for the active contact (requires "instant history" enabled)
    * Introduced a scheme for embedding command codes inside text buffers. As a result of this, it is now possible to use more than one text colour in the text
    * Following the above, it is possible to config the colours of message headers in preferences
    * aICQ will now detect URLs hidden inside "brackets" like ()[]{}
    * Arrow-down key should move cursor to end of line below, even if that is to the left of current cursor position

-In other words, if previous aICQ release introduced stability issues on your setup you should definitely give this one a go!

The team at AtariArchives.org is pleased to announce that the full text of the best-selling book _Machine Language For Beginners_ by Richard Mansfield is now online at

    http://www.atariarchives.org/mlb/

Published in 1983 by Compute! Books, this classic book shows BASIC programmers how to program in 6502 machine language. It includes examples and program code for Atari, Apple 2, PET/CBM, VIC-20, and Commodore 64 computers.

This is the 12th classic computing book available at AtariArchives.org. Like all books at the site, it has been made available by permission of the copyright holder.

The geeks, nerds, and spazzes at atariarchives.org are proud to announce that the full text of Compute!'s First Book of Atari is now available on the Web.

Published in 1981, this classic book includes articles printed just after the release of the Atari 400 and 800 computers. It includes early reviews of Atari BASIC, DOS 1, and the Atari 810 disk drive, plus unique BASIC and machine language tutorials. The first chapter includes an interview with Atari's VP of marketing, examining the early '80s personal computer market.

All of the book's type-in programs are available for download. This is the 13th book to be made available at atariarchives.org.

It's available at
     http://www.atariarchives.org/c1ba/

The folks at atariarchives.org are proud to announce that the full text of the classic computer book _Creating Adventure Games On Your Computer_ is now available on the Web. Written by Tim Hartnell and published in 1983, the book includes four complete adventure games in BASIC plus innumerable tips on creating your own text adventures.

The book's BASIC programs are compatible with Apple II, Atari 8-bit, Coleco Adam, Commodore 64 and Vic-20, IBM PC, Texas Instruments TI 99/4a (with Extended BASIC), all TRS-80 models, and MSX BASIC. All of the programs are downloadable for instant gratification.

This is the 14th book to be made available at atariarchives.org.

I've uploaded a new AtariSIO release to my homepage
http://www.horus.com/~hias/atari/

Version 0.11 beta includes the following changes:

* atariserver now contains loadable 6502 highspeed SIO code
  (like the HDI or Speedy 1050) - thanks to ABBUC for the code!

* A "print DOS2.x directory" function was added to atariserver

* AtariSIO now reached beta status

* serveral minor bugfixes and improvements

so long,

Hias

The folks at the Classic Computer Magazine Archive are delighted to announce
that the full text of Creative Computing Video & Arcade Games Magazine is now
on the Web, at
     http://www.atarimagazines.com/cva/

A short-lived spin-off from Creative Computing magazine, Creative Computing
Video & Arcade Games magazine only published two issues, in 1983. But they
were both packed with great information about home video games, computer
games, handheld games, and arcade games. The magazines include reviews, guides
to mastering games, and informative features.

Highlights include:

Who Really Invented The Video Game?
     http://www.atarimagazines.com/cva/v1n1/inventedgames.php

Tokens Begin to Appear In Arcades
     http://www.atarimagazines.com/cva/v1n1/spareatoken.php

Report from the 1983 Summer Consumer Electronics Show

http://www.atarimagazines.com//cva/v1n1/vgupdate.php

New Top Ten Games At Amusement Operators Expo '83
http://www.atarimagazines.com//cva/v1n2/toptengamesofaoe.php

Interviews with Alan Miller, Steve Cartwright, and Carol Shaw
http://www.atarimagazines.com//cva/v1n2/gamedesigners.php

The Origin of Spacewar
http://www.atarimagazines.com//cva/v1n1/spacewar.php

Review of the Atari 5200
http://www.atarimagazines.com//cva/v1n1/atari5200.php

First look at Vectrex
http://www.atarimagazines.com//cva/v1n1/vectrex.php

Review of LCD Pocket Games
http://www.atarimagazines.com//cva/v1n2/pocketgames.php

Launched in 1996, the Classic Computer Magazine Archive offers full text from Antic, STart, Creative Computing, and Hi-Res magazines, as well as information from Compute! and Compute!'s Gazette.

Hot on the heels of Atari 2600 emulator announcements, the GP32 handheld is
now host to the Atari ST Castaway emulator, courtesy of Jeff Mitchell. Now you
can enjoy the many excellent Atari ST games like Dungeon Master on a game
system you can take anywhere! For more information (including screenshots)
and to download the emulator if you have a GP32, please visit codejedi.com.

Hi,

I_ve released a new version of EasyMiNT, major news are:

- Aranym supported (Thanks to Petr Stehlik)
- Teradesk 2.3 support
- Put together some dialogs and alerts
- XaAES 963 support (because of changing archive structure, only this
  version)
- Network card driver can be copied during installation now
- Added nameserver entry to NIC configuration dialog
- Possibility to install existing rpms only with LST files and
  without TAR packages (Attention! ALPHA)
- put findutils to STANDARD.TAR
- put vim-minimal to STANDARD.TAR
- reworked the TAR packages

You can get it under:

http://atari.st-katharina-apotheke.de

Have fun!

Version 1.4 of Atari800MacX has been released. It has several bug fixes in it
(the Emulator state save now works with all cartridges). Most of the
enhancements relate to Gamepad controls, and some of the bug fixes are in this
area as well. See http://members.cox.net/atarimac for full details and download.

AtariAge is pleased to announce the addition of a Magazine Archive section to
the site. High-quality scans of Atari Age Magazine, the Activisions
Newsletter, Numb Thumb News, Atarian Magazine and the Activision Fun Club News
(their UK newsletter) are now online, with more magazines arriving in the
future. In addition to making these magazines available for easy browsing
online, they are also available for downloading so you can view them at your
own leisure. These magazines are a fascinating insight into Atari history,
and a must read for any Atari fans!

The Coolest Paradise released a new game for Atari STE/Steem.

It also works on STf and Falcon, but you should avoid to go into 'infos'
menu... A stf and Falcon 100% bug-free version will be done if some people is
interested in it.

While months have gone by since the last public release. Rarely a day has gone by without work being contributed to the project. We hope you enjoy some of the updates and work that has gone on in the last few months. While we still have a alot of work ahead of us, this will hopefully provide you with as satisfying update.

Changes since the last version include:

The new implemented navigation bar allows easy entering of URLs as well as going for/backward in view history (can be hidden/shown by holding down the ALT key while clicking the window's closer button).

Changed the behaviour of the window's info bar to have it more logical and informative.

New control keyword for the configuration file to change the appearance of the info bar, can be displayed now at the window's bottom (see example.cfg highwire.cfg for explanation).

Forms now also support selection lists, as given from <select name=foo><option value=bar>.. tags.

Improved handling of framesets, frames are resizeable now.

Fixed wrong image colours under TrueColor, added support for 16bit HighColor with reverted byte order. Improved vertical position and line height calculation when align=top/bottom is set.

Initial implementation of OVLs for different network support (MiNTnet and STiK2).

Improved calculation of the width of tables and their cells, makes several pages looking a bit better.

Fixed a bug in interpreting of quoted file names from VA_START.

Improved parsing of urls to encode HTML entities and remove control characters from links. Also invalid urls of the form with a missing http: are supported now.

Fixed a bug in parsing of plain text files which led to an endless loop on very long lines.

Fixed a bug in the style=".." parsing function which could cause crashes before.

Mended some more memory leaks.

Overworked charset encoding to speedo encoding for better performance.

The new version includes the following enhancements:

- support for DCM/DI/XFD disk images
- transparent (de-)compression support through zlib
- devfs support in the kernel driver
- support for non-standard SIO2PC cables (using DSR instead of RI)
- added 'all' option to several atariserver functions
- several minor bugfixes and improvements

AtariSIO can be downloaded from my homepage

http://www.horus.com/~hias/atari/

so long,

Hias

Next Saturday June 7th the Midwest Classic Computer Show will be
taking place in the Milwaukee area. The website is
www.midwestclassic.net

Particulars
10:00am to 8:00pm
Nicolt High School
6701 North Jean Nicolet Road
Glendale, WI 53217
Admission $6.00 advance (must be purchased online before midnight
tomorrow)
          $8.00 at the door

Milwaukee Computer Society (Previously MilAtari) will be running a
MidiMaze event at the show. We will have 10 computers linked together
via Midi ports playing MidiMaze one of the first multiplayer games for
computers.

Fran?ois LE COAT has announced:

The software Eureka is updated and released on its WEB page. It is a"2D Graph Describer and 3D Modeller". It is updated nearly every month, if I found significant improvements for it. You will have to fetch it at :

http://eureka.atari.org/eurka306.zip
That is the Complete Common Edition

http://eureka.atari.org/eurkafpu.zip
Is the Limited FPU Edition

http://eureka.atari.org/eurka020.zip
Is the Complete 68020 Edition

http://eureka.atari.org/eurklite.zip
Is the Lite Edition, working on early ST with 720kb floppy

http://eureka.atari.org/lib_dgem.zip
Are Dynamic Libraries Extensions for Eureka

http://eureka.atari.org/tiny044.zip
Is the OpenGL Extension (requires previous package)

With this update there is usual corrections. There's also new image formulas.

I wish you big fun with all this new STuff !

Best regards,

-- Fran?ois LE COAT

Alexander Feige has announed:

It is now possible to download Atari-made music from me, Alexander Feige, from
my new homepage, which has now been translated to English.
I'm also offering the ST-demos which I have made in the early 90's together
with my ST-demo-group, the NATO.

This site will also offer new Atari-software somewhere in the future.
The two URLs are:
http://www.gute-musik.org
http://www.alexander-feige.de

XL Search 2.0 is a new MySQL- and PHP-driven remake of XL Search!

I'm opening it up for beta testing and so that folks can comment on it
(and help me tweak the MySQL searching code so it's more user-friendly ;^))

  http://www.newbreedsoftware.com/xlsearch2/

Of course, the old XL Search is still online:

  http://www.newbreedsoftware.com/xlsearch/

Enjoy!

Dear Atari Community!

We are happy to announce release 0.7 of EmuTOS, 3. Jun. 2003

INTRODUCTION

EmuTOS is a single-user single-tasking operating system for the 32 bit Atari computers and emulators. It can be used as a replacement for the TOS-images typically needed today for using emulators and it is also running on some real hardware, like the Atari Mega STE. As all the source code is open and free it is could even run on totally new machines in the future.

EmuTOS has been developed for nearly two years now and is licensed under the OpenSource Gnu General Public Licence (GPL).

CHANGES SINCE LAST RELEASE

- experimental support for #Z line in EMUDESK.INF to start another desktop
- bug in VDI's clipping routine fixed
- bug in C-pattern filling removed
- now really makes sound with Dosound()
- EmuCON is now usable from the desktop via a menu
- hitting 'C' during initinfo launches an early EmuCON
- programs can now be started and left from an external desktop program
- programs can now see, if they are started as accessory
- the working linea-functions are now usable from the autofolder too
- fixed a problem with mouse buttons in certain programs (Thing, Pixart, ...)
- ... and many minor improvements you will not see immediately

DESCRIPTION

EmuTOS is basically made up of six subsystems:

- The BIOS, which is the basic input output system
- The XBIOS, which provides the interface to the hardware
- The BDOS, which are the high level OS routines, what you know as GEMDOS
- The VDI, the virtual device interface - means the screen driver
- The AES, the application environment services or window manager
- The desktop, which is the graphical shell to the user

The BIOS and XBIOS code is our own developement. It is really written from scratch and implements nearly all of the TOS 1.0 BIOS functionality, and a

bit more, like e.g. harddisk access.

The GEMDOS part is based on Digital Research's GEMDOS sources, which were made available under GPL licence in 1999 by Caldera.

The graphical parts like VDI and AES are now more or less fully implemented. They work in all the graphics modes of the original Atari ST. On some emulators EmuTOS can be patched to work with much bigger screen resolutions without any problems.

The desktop is not as nice as the original one, but is pretty usable now for a start. You are free to use a more advanced desktop replacement any time, like teradesk for example.

Since EmuTOS just implements the TOS's functionality, you might want to use MiNT on it in order to run more modern software. EmuTOS is not an alternative to MiNT. But EmuTOS is the only free base OS to boot MiNT.

EMULATION AND FUTURE PLATFORM

EmuTOS and MiNT cooperate well. Both can make use of a standard native call interface for emulators.
EmuTOS itself still uses this new standard native interface for all its supported native functions. When running EmuTOS in an emulator, this interface will provide access to use the power of the underlying OS kernel. It may allow using modern 3D graphics cards, providesfast native filesystem access and will enable you to use networking with all bells and wistles - and many things more you always dreamed of. This all will at first get possible on the Aranym platform.

This is, what EmuTOS is made for: A free OS, that can evolve. Progress has been fast up to now, because we have a small, but enthusiastic development team and are eager to see EmuTOS running with GEM and all.

HARDWARE

Making EmuTOS running natively on a new hardware platform is more or less just a question of driver support for EmuTOS. The same for MiNT, if you'd like to have it running on top of EmuTOS.

This is the currently supported Hardware:

- CPU support for m68000, m68010, m68020, m68030, m68040
- FPU detected
- Memory controller (both ST and Falcon)
- Monitor type detection (mono or not)
- WD 1772 Floppy disk controller (write track not tested)
- DMA controller
- MFP

- PSG
- ST shifter
- STE shifter (partitially)
- ACIAs, IKBD protocol, mouse
- MegaST Real-Time Clock (set clock not tested)
- NVRAM (including RTC)
- DMA sound
- The native feature interface to some degree

AVAILABILITY

EmuTOS has its home at sourceforge:

    http://sourceforge.net/projects/emutos

A ready made EmuTOS image or the source can be downloaded from:

    http://sourceforge.net/project/showfiles.php?group_id=36560

It is always available in source form from our CVS server at:

    http://sourceforge.net/cvs/?group_id=36560

If you are just curious or would like to help us develop this nice little
OS, you are invited to subscribe to our Mailinglist for developers at:

    http://sourceforge.net/mail/?group_id=36560

We hope that you like EmuTOS. If you have any suggestions or comments, we
always appreciate to hear the good and also the bad things about it.

Your EmuTOS development team.

A new release of the open source browser for Atari has arrived. This time you
can above all look forward to bugfixes although there are some minor additions
too. These changes are concerning eg. resizing of frames and scrolling.
Additional information as well as download URL for the new release is
available on the HighWire website.

URL: http://highwire.atari-users.net/

The Best of Creative Computing Volume 2 is now available on the Web in
its entirety. Published in 1977, this book is a true classic, containing

300+ pages of articles and programs published in 1976, the second year of
Creative Computing magazine.

    http://www.atariarchives.org/bcc2/

A few highlights, in no particular order:

Building a MITS Altair 8800
   http://www.atariarchives.org/bcc2/showpage.php?page=272

Account of 1976 Star Trek Convention
   http://www.atariarchives.org/bcc2/showpage.php?page=162

Videodisc Systems
   http://www.atariarchives.org/bcc2/showpage.php?page=9

XEROX PARC Flight Simulator
   http://www.atariarchives.org/bcc2/showpage.php?page=37

A Retail Computer Store? You Gotta Be Kidding!!
   http://www.atariarchives.org/bcc2/showpage.php?page=91

Computer Literacy Quiz
   http://www.atariarchives.org/bcc2/showpage.php?page=62

Atariarchives.org also features the Best of Creative Computing volume 1
    http://www.atariarchives.org/bcc1/
...as well as 13 other classic computing books.

Enjoy,
Kevin Savetz

SainT update to v1.32

- Disk writing supported. (.ST and .MSA image file). You can use your fave ATARI tools and save your work !

- Keep sound playing option when loosing focus (windowed mode only)

- Some bugs fixed ("Posh" demo by Checkpoint is working)

Hi,

translation of the "Netzwerk f[illegible]r Dummies" text is available, it_s a

description of how to configure a network with EasyMiNT, resp. the use
of clients or servers like telnet, ftp and nfs.
Furthermore I have set up a little statistics about the registered
EasyMiNT users and where they are coming from.

Have fun!

Marc-Ant[illegible]n

Could you have had what it took to be an Atari Program Exchange author? You
may never know for sure, but you can now read the APX Program Author's
Handbook to get programming and documentation writing advice straight from the
mouth of Atari, circa 1982.

Draconis News 9/2003
====================
(English version see below)

1. The Light of Adamas
Mit dem Adamas Pre-Release 17 steht eine neue Version des Release-
Candidate zur Verf�gung. Es erfolgten noch ein paar kleine Korrekturen,
au�erdem wurde die Zusammenarbeit mit dem MintNet-Gateway und Aranym
�berarbeitet.

*** Adamas 1.8 Pre17 ***
* Sizer in Frame-Seiten
* Marquee attributes
* Fehler bei Speicherfreigabe Script-Defaults
* Problem beim Zugriff auf "Forbidden"-Seiten gefixt
* Mintnet-Gateway (v33b) - Anpassung

Das Pre-Release kann wie bisher �ber folgende URL geladen werden:

http://draconis.atari.org/draconis/archives/ada18dev.zip

bzw. die Version f�r 68030er Prozessoren

http://draconis.atari.org/draconis/archives/ada18d30.zip

2. MintNet-Gateway 0.33b
Das MintNet-Gateway wurde �berarbeitet und arbeitet jetzt z.B.

mit Aranym, Mint 1.16 & Adamas 1.8 zusammen. Durch Installation
mit

        mgw.prg --dns1=IP-Adresse --disable-system-resolve

(eintragen in mint.cnf f�r statische IP, ip-up f�r dynamische IP)

ist nun auch das asynchrone Abfragen des/der Nameserver m�glich,
dadurch steht auch in dieser Phase weiterhin die volle Reaktions-
f�higkeit der Anwendung zur Verf�gung.

Das neue MintNet-Gateway steht zur Verf�gung im Freemint CVS oder
als Einzelarchiv:

http://draconis.atari.org/draconis/archives/mgw033b.tgz

---

1. The Light of Adamas
Adamas Pre-Release 17 is a new Version of the Release-
Candidate. There were done some small changes, also the communication
with MintNet-Gateway was revised.

*** Adamas 1.8 Pre17 ***
* Sizer in frame pages
* Marquee attributes
* Fixed an error when freeing memory for Script defaults.
* Fixed a problem, when accessing "Forbidden" pages.
* Mintnet-Gateway (v33b) - adaption

The Pre-Release is available at:

http://draconis.atari.org/draconis/archives/ada18dev.zip

a 68030 version is available at

http://draconis.atari.org/draconis/archives/ada18d30.zip

2. MintNet-Gateway 0.33b
The MintNet-Gateway is revised regarding the cooperation with
Aranym, Mint 1.16 & Adamas 1.8. By installing it with

        mgw.prg --dns1=IP-Adresse --disable-system-resolve

(introduce in mint.cnf for static IP, ip-up for dynamic IP addresses)

it is possible to query the name server asynchronously. This enables
that the application will still react to user actions during this phase.

The new MintNet-Gateway is available through the Freemint CVS or a
standalone archive is available at:

http://draconis.atari.org/draconis/archives/mgw033b.tgz

FoundationTwo proudly released "DuSau". The game is a adaption of a card game
we played at school some decades ago. The game is a demonstration of AGUIGEN
and the underlaying NonConForm lib. AGUIGEN ist a Rapid Game Development tool,
F2 is creating for 3 years now.

At the day of AtarICQ's 3rd anniversary, there is a new release available.
Most of the changes are related to restructuring the source code, but there
have also been some quite noticable changes and additions. Please visit the
AtarICQ website to download and read the full story.

The folks at atariarchives.org are thrilled to announce that the full text of
Atari Roots is now available on the Web.

Published in 1984, Atari Roots is perhaps the best guide to Atari 8-bit
assembly language ever written. The site includes the full text of the book,
plus downloadable software and source code, at:
     http://www.atariarchives.org/roots/

This is the 16th classic computing book to be made available at
atariarchives.org.

The team at AtariArchives.org is pleased to announce that the full text of the
best-selling book _The Second Book Of Machine Language_ by Richard Mansfield
is now online at

    http://www.atariarchives.org/2bml/

Published in 1984 by Compute! Books, this classic book is the sequel to
Machine Language For Beginners, another of Mansfield's best-selling titles
which is also available on the Web site. The Second Book Of Machine Language

walks readers through the creation of LADS (Label Assembler Development System,) a sophisticated assembler written in machine language. It includes examples and program code for Atari, Apple 2, PET/CBM, VIC-20, and Commodore 64 computers.

This is the 17th classic computing book to be made available at AtariArchives.org. Like all books at the site, it is available with the gracious permission of the author.

MJJ Prod have release their new Slideshow for ST and Falcon.

It's a compilation of (almost) never seen pictures from C-Rem, Niko and Wilfried plus a lot of hidden screens.

The long awaited CT60 Falcon accelerator from Czuba-tech is finally shipping
to developers. Some stability issues are still being resolved, but performance
is looking very exciting - 15 to 20 times faster than a standard falcon, and
4-5 times faster than the best existing accelerators (CT2, Afterburner 040)

It is even outperforming the Hades060 in some tests!

See this site for some benchmarks:
http://perso.wanadoo.fr/didierm/ct60/benchs.htm

There are other benchmarks on the czuba-tech site

The CT60 allows a Falcon to run a Motorola MC/EC/LC68060 @ 66mhz, with the bus
running at 16, 20, or 25mhz. The DSP and Videl (graphics chip) can be run at
40 or 50mhz

Hello,

New version of Steem online (4th July 2003) :
http://www.blimey.strayduck.com/

Steem 2.5 (Windows 95/98/ME/NT/2000/XP) 235 Kb
http://www.blimey.strayduck.com/steem_v2_5.zip

XSteem 2.5 (Linux, 486+, X) 1.11 Mb
http://www.blimey.strayduck.com/xsteem_v2_5-7-i386.tar.gz

Here it finally is, the much troubled Steem v2.5. Due to various mysterious bugs the release has been delayed a long time, but it is finally stable (we hope), here is a list of what has changed:

Bug Fixes
. Fixed PSG write bug (X-Out)
. Implemented FDC spinup (Vroom multiplayer)
. Improved hard drive program terminate emulation (still not perfect)
. Improved MFP accuracy (Harley Davidson, Super Hang-On)
. Fixed some disk formatting bugs (Fastcopy Pro, Acopy, Chambers of Shaolin)
. Fixed GEMDOS void return bug (Amberstar hard drive install)
. Fixed hard drive read only file bug
. Fixed set video address at end of line bug (Relapse Demo)
. Fixed turn IKBD off during reset bug (Just Buggin')
. Fixed trace interrupt with exceptions
. Fixed 512Kb and 2Mb memory sizes
. Fixed FDC seek bug thanks to Kimmo Hakala (Air Supply)
. XSteem: Much improved sound
. Stupid hard drive booting bug fixed

New Features
. Macros - record keyboard/mouse/joystick input (won't work on some versions of Windows)
. Profiles - save all settings and restore them at your leisure (won't work on some versions of Windows)
. Disconnect drive B option (Premier Manager 2, Alternate Reality v1.2)
. Accurate drive speed option
. More flexible shortcuts
. Customisable icons
. Disks in archives can be read/write (changes are lost on eject)
. Minimum size screenshots option
. GUI improved
. Fullscreen quit button
. XSteem: Vastly improved GUI
. DEBUG: Trace is now cycle accurate
. DEBUG: Separate memory monitor and breakpoints

. DEBUG: Step over, shift display, redraw on stop
. DEBUG: Break on interrupt
. DEBUG: Bigger memory/source dumps
. DEBUG: More versatile find in browsers

Best regards,
Paul CAILLET.

Hatari version 0.40 has been released.

A lot of bugs have been fixed and some of the most important changes are that
Hatari now features support for ZIP and GZIP compressed disk images and you
can now also store your emulator settings in an ASCII configuration file.
Please visit the official web site of Hatari for more information.

Draconis News 9/2003

(English version see below)

* Draconis Treiber f�r MagicPC v0.1�

Die erste Treiberversion der MagicPC-Treiber f�r Draconis-Programme steht ab sofort zur Verf�gung. Mit diesen Treiber ist eine direkte Internet-verbindung �ber das TCP/IP von Windows m�glich. Dadurch stehen nun Ethernet, DSL und Verbindungen �ber Analog/ISDN-Modems auch innerhalb von MagicPC zur Verf�gung.

Die Treiber stehen zur Verf�gung unter:

http://draconis.atari.org/draconis/archives/drac_mpc.zip

* The Light of Adamas

Die aktuelle Adamas-Version ist 1.8 Pre-Release 20.

Die wesentlichen Neuerungen:

*** Adamas 1.9 Pre20 ***
- N.AES Anpassung
- Font-Dialog GEM
- URL-Droplist GEM
- Autodrop GEM
- Image-Verhalten download
- Download-Abst�nde optimiert
- Speicher wurde �berschreiben, bei Online-Mode (TITLE)
- Doppelte Speicherfreigabe gefixt.
- Online Zugriff/Refresh
- ALL-Array bleibt nun korrekt erhalten bei Refreshs
- URL-Eingabe auf Standard-Dialoghandler umgestellt.
- Slider �berschrieb Symbol
- Fix beim download kleiner Seiten
- Slb-Fix.
- Anchorsprung zu ID.

Das Pre-Release kann wie bisher �ber folgende URL geladen werden:

http://draconis.atari.org/draconis/archives/ada18dev.zip

bzw. die Version f�r 68030er Prozessoren

http://draconis.atari.org/draconis/archives/ada18d30.zip

---
* Draconis Driver for MagicPC v0.1�

The first driver version for Draconis Programs running with MagicPC
is now available. This offers a direct internet connection over the
TCP/IP of Windows, which enables access over Ethernet, DSL and
connections via Analog or ISDN modem (cards) also under MagicPC.

The driver is available at:

http://draconis.atari.org/draconis/archives/drac_mpc.zip

* The Light of Adamas

The current Adamas version is 1.8 Pre-Release 20.

The main changes are:

*** Adamas 1.9 Pre20 ***
- N.AES adaption
- Font dialogue GEM
- URL droplist GEM
- Autodrop GEM
- Image behaviour during download
- Download pauses optimized
- Memory was destroyed in Online mode (TITLE)
- Double memory freeing fixed.
- Online Access/Refresh
- ALL-Array now still correct after a refresh.
- URL input now handled by standard dialog handler.
- Slider overwrote Symbol
- Fix in download of small pages
- Slb-Fix.
- Anchor jump to an ID.

The Pre-Release is available at:

http://draconis.atari.org/draconis/archives/ada18dev.zip

a 68030 version is available at

http://draconis.atari.org/draconis/archives/ada18d30.zip

The HighWire Development Team would like to announce that the 0.0.8Alpha
release of HighWire is now available for your use and entertainment.

Changes in this version include the following.

Extended menu bar, the current charset encoding can be seen and changed
at menu title "View". Also de/increasing of the display font is
available there.

Menu entry"Info.." will show now some basic information about the active
frame.

Right mouse click now opens a popup menu.

Improved algorithm for line breaking to avoid splitting of text lines at
wrong positions.

Implementation of memory caching of images avoids multiple loading of
the same image. The pseudo URI "about:cache" now shows detailed
information about cached images.

Implementation of <frame scrolling=..> attribute.

Bugfix tags inside links breaking colouring.

And many more ...

Download links are on the HighWire site.

AtariAge has just put their 2002 Classic Gaming Expo report online. In
addition to the report, you can view hundreds of pictures, video from
the event, and a gallery of all the Atari-related games released at the
show. You can find all of this on AtariAge here:

Dear Atari Community!

We are happy to announce the second beta release of EmuTOS (0.5 beta).

INTRODUCTION

EmuTOS is a singleuser singletasking operating system for the 32 bit Atari computer emulators. It is thought as a replacement for the TOS-images you usually need today for using emulators and it is also running on some real hardware, like the Atari Mega STE. All is open and maybe it is also running on totally new machines in the future.

EmuTOS is beeing developed for more than a year now and is licensed under the OpenSource Gnu General Public Licence (GPL).

DESCRIPTION

EmuTOS is basically made up of six parts:

- The BIOS, which is the basic input output system
- The XBIOS, which provides the interface to the hardware
- The GEMDOS, which are the high level OS routines
- The VDI, the virtual device interface - means the screen driver
- The AES, the application environment services or window manager
- The desktop, which is the graphical shell to the user

The BIOS and XBIOS code is our own developement. It is really written from scratch and implements nearly all of the TOS 1.0 BIOS functionality, and a bit more, like e.g. harddisk access and STE sampled sound. A few things like printing, midi and serial stuff is missing for now, but may be implemented somewhere in the future.

The GEMDOS part is based on Digital Research's GEMDOS sources, which were made available under GPL licence in 1999 by Caldera.

The graphical parts like VDI and AES are now more or less fully implemented. They work in all the graphics modes of the original Atari ST. On some emulators EmuTOS can be patched to work with much bigger screen resolutions without any problems.

The desktop is not as nice as the original one, but is pretty usable now for a start. You are free to use a more advanced desktop replacement any time.

Since EmuTOS just implements the TOS's functionality, you might want to use MiNT on it in order to run more modern software. EmuTOS is not an alternative to MiNT. But EmuTOS is the only free base OS to boot MiNT.

EMULATION AND FUTURE PLATFORM

EmuTOS and MiNT cooperate well. For the future we plan, that both can make use of a yet to implement standard native call interface for emulators.

When running EmuTOS in an emulator, this interface will provide access to use the power of the underlying OS kernel. It may allow using modern 3D graphics cards, will provide fast native filesystem access and will enable you to use networking with all bells and wistles - and many things more you always dreamed of.

This is, what EmuTOS is made for: A free OS, that can evolve. Progress has been fast up to now, because we have a small, but enthusiastic development team and are eager to see EmuTOS running with GEM and all.

HARDWARE

Making EmuTOS running natively on a new hardware platform is more or less just a question of driver support for EmuTOS. The same for MiNT, if you'd like to have it running on top of EmuTOS.

This is the currently supported Hardware:

- CPU support for m68000, m68010, m68020, m68030, m68040
- FPU detected
- Memory controller (both ST and Falcon)
- Monitor type detection (mono or not)
- WD 1772 Floppy disk controller (write track not tested)
- DMA controller
- MFP
- PSG
- ST shifter
- STE shifter (partitially)
- ACIAs, IKBD protocol, mouse
- MegaST Real-Time Clock (set clock not tested)
- NVRAM (including RTC)
- DMA sound

AVAILABILITY

EmuTOS has its home at sourceforge:

    http://sourceforge.net/projects/emutos

A ready made EmuTOS image or the source can be downloaded from:

    http://sourceforge.net/project/showfiles.php?group_id=36560

It is always available in source form from our CVS server at:

    http://sourceforge.net/cvs/?group_id=36560

If you are just curious or would like to help us develop this nice little OS, you are invited to subscribe to our Mailinglist for

developers at:

     http://sourceforge.net/mail/?group_id=36560

Hope, you like EmuTOS. If you have any suggestions or comments, we
always like to hear the good and also the bad things about it.

Your EmuTOS development team.

The fifth and sixth CD's of music from the Atari scene was released a
little while ago. The entire content is online on the Atari.Org official
Fading Twilight mirror site.

Six CD's filled up with modules and mp3's from Atari (ST/Falcon/Jaguar
(mostly)) demos and games are waiting for you.

A new port of the Atari800 Emulator for Mac OSX is now avaiable. If
features the current Atari800 base, including all of the recent adds for
cartridge types, such as Action!, SpartaDosX, etc.. It also does full
screen emulation.

The current release is very alpha, and not at all Mac-like.
Preferences, native menus, and more features are coming soon.

KEYTAB 08 is released on 2002-09-01. It's a little system utility which
offers routines for converting chars between charsets (i.e.
Atari->WIndows ANSI, ISO-8859-1 (ISO Latin1) -> Atari, etc.). KEYTAB is
freeware incl. utilities, the library for developers (Pure-C, GNU-C,
Pure Pascal, GFA) and all sources.

There are thre new charsets implemented: NeXT, IBM COdepage 437 and IBM
Codepage 850. Furthermore are there new conversions: from any of the
supported charsets chars and memory blocks can be converted to unicode.

In addition to the Conversions of 8-Bit-Charsets there are
unicode-docings with variable length like UTF-8, UTF-7,5 and UTF-7
(UTF=Unix Transformation Format). With new implemented functions there
are conversions between all charsets incl. the unicode-codings in any
other charset - internally via the aatari charset or via unicode.

KEYTAB can be downloaded from http://acspro.atari.org/

Martin Doudoroff has created an amazing history of the Cyber graphics
software that Antic published for the ST.

"This Web site documents some moderately obscure computer graphics
software history: a suite of animation products produced in the late
1980's for the Atari ST personal computer platform. Although the fact is
not widely known, this Atari?oftware, published by a defunct computer
magazine called Antic, directly preceded and led to the Autodesk 3D
Studio and Discreet 3ds max products used by thousands of people today.
The articles herein basically comprise an oral history: the information
is drawn from interviews and hands-on exploration of the software,
running under emulation or on original equipment."

Organization: Cox Communications
Xref: archiver1.google.com comp.sys.atari.announce:287

This has been a long time in coming, but version 0.8 of a8jdpeg is now
available:
http://a8jdpeg.atari.org
http://a8jdpeg.webhop.org

a8jdpeg is a JPEG viewer for the Atari 8-bits, based on the C=64's
Juddpeg decoder (http://www.ffd2.com/fridge/) written by Stephen L. Judd.

This version replaces the release dated 07Aug01, and includes the
following changes:
* Added dithering to most modes. This improves the displayed image
quality.
* Added image information/help screen.
* Images can now be saved while displayed in modes 2, 3, D and E.
* The jagged borders at the image edge in HIP mode have been eliminated.
* Added default filename on the save prompt.
* Viewer now defaults to mode E (HIP) in 64K and mode 5 (GR.9) in 48K
* Inverse video and upper/lower case keypresses are now handled in all
menus.
* Fixed problem with the last column in certain images being repeated
when
an offset was used.
* The decoder won't abort on images with Huffman errors if they contain
restart
markers.
* Replaced the raw save option with a PGM (Portable Gray Map) save
option.

Note:
The 64K display modes use the RAM under the OS, and hence will crash most
versions of SpartaDOS. These should work fine with BEWEDOS though.
The 48K display modes should work fine with any version of SpartaDOS.

Comments, suggestions, bug reports, feedback, etc. are welcome.

The following is posted with permission from Paul Alhart.
=-=

Products available from Alhart Enterprises Presents are:

RANA Repair Guide (book) $12

Complete mechanical & electrical alignment instructions for the Rana Systems 1000 disk drive. Includes schematics, waveform diagrams, parts lists, controller PCB updates & modifications, and several helpful repair tips.

**********Buy any 2 or more disks for only $3 ea.**********

AtariWriter+ Companion (disk) $5

A wealth of information for AW+ users. 10 of my past A-T-A-R-I columns that deal exclusively with AW+. Includes ready to run programs that let you modify several AW+ defaults and functions, edit and install new screen fonts, change screen colors, increase the key-repeat rate, disable the '850 handler' loader... And so much more.

Use with AW+C.II to make AtariWriter+ the best it can be.

AtariWriter+ Companion II (disk) $5

A must for hard drive users. AtariWriter+ Companion II allows you to customize the 48K version of AW+ Eliminate copy protection. Add high speed J/S cursor routine. Decrease title screen display time Allow the Dictionary disk to be used in any drive from 1 to 9. Let AW+ load PROOF from any drive. Let PROOF load AW+ from any drive. Change the screen display width. (Left margin & # of Columns)
Eliminate several annoying prompts. Allow directories from drives 1-8 Allow directory of AW+ master disk to be displayed. And more.

StarStuffer (disk) $5

Create fonts and download them to your Star NX-10 or SG-10 printer upon boot-up. Can be used with any programing language or word processor. Disk includes several ready made fonts as well as programs to

edit them or create new ones using a joystick. Fonts can be saved as binary files that can be loaded via menu or as an AUTORUN.SYS file.

Search System II (disk) $5

An easy to use general purpoe data base/filer. Accepts unstructured varable length fields. Machine language sort & find routines allow quick retrivel of information for printing, editing, or deleation.

Atari BASIC Enhancements (disk) $5

Perform DOS functions, translate error codes to English, convert between Decimal & Hex numbering systems, and more from BASIC. Similar to the Wedge, but uses no program memory. Works with ALL 8-bit Ataris.

8-bit TTL Logic Analyzer (disk) $5

Great project for hobbyists. On this disk is the software & commented MAC65 source code as well as the schematic and directions for building the required interface which can be built for under $10.

MagicCalc (disk) $5

A "memory resident" 4 function calculator for machines with expanded memory. This program hides away in expanded memory until called via a Hot Key combination. Calculator entry can be Decimal, Hex, or Binary. (Divide a Hex number by a Binary number) Entries and results are displayed in all three numbering systems. There are two versions of MagiCalc on this disk. MagiCalc XL is for XL/XE machines with XE compatible expanded memory such as Rambo. MagiCalc 800 is for 400/800s with Axlon memory upgrades.

Games disk (disk) $5

Jacks Cargoship is a battleship type game for one or two players. Play against the computer or a friend. Day, Evening, and Night time senarios with player handicap available.

Light Pen/(Light Gun) Tic-Tac-Toe. One player game. Simple but fun.

Reconditioned disk drives. All drives come with power supply, I/O cable, and 90 day warranty.
.

```
810 (no case)     $20
810 w/case        $25
810 w/Archiver    $30
1050              $35
Rana 1000         $40
1050 w/doubler    $45
Indus GT          $45
.
A $15 creidt will be applied if you send me your dead drive (same base
model as ordered), power supply, and I/O cable.
.
My stock levels are always changing. Please call or write to verify
current stock before ordering.
.
Include $10.50/drive for USA S&H. Make checks payable to:

In order to improve useability as well as to simplify the work with
maintaining the HighWire forum, it has now become a part of Atari Talk
Forums. We hope that the new forum will attract more people to frequent
the forum and talk HighWire.

HighWire: http://highwire.atari-users.net

Another project that now takes advantage of the Atari Talk Forums is The
Orphaned Projects Page. Now you can join in on discussions about things
related to the work carried out on TOPP.

TOPP: http://topp.atari-users.net

Megastar is the first ST game actually published by ASM Software. This
is a little freeware shoot'em up made with SEUCK for up to 2 players.

Graphics are quite bad, it is more of a hobbyist style game than a
commercial grade shareware game.

There are new drivers for MiNTNet available at
http://assemsoft.atari.org. You will find NE2000 drivers
in EtherNEC and PCI versions. Also updated RTL8139 drivers
are available. Have a look.

The largest music demo over all time has been released. No less than
4646 Atari ST tunes collected into a huge music demo.

There are also a long tour of the Atari ST chipmusic over a dozen years.
From the first games to the latest TAO techniques. A real perl.

You can download the UMD8730 from these places:
http://phf.atari.org/ and
http://www.dhs.nu/

The new Atari800 emulator for Macintosh OSX has been updated, version
0.2.1 It now features a full Cocoa interface, with native menus,
preferences, file associations, help and more. It is still a beta
release, as it has had a limited number of offical testers, but it has
come a long, long way.

There is an article about the work of the
Atari Coldfire Project available at the
website: http://acp.atari.org

It covers the progress of the project and
features insights of the work of ACP.
Additionally, there is a discussion about
the 'Wilhelm'-board, that was mentioned
some time ago.

Have fun while reading!

Lyndon Amsdon has announced:

I have more stock of EtherNEC after the recent delays over summer.
EtherNEC is an adaptor to connect an ISA network card to the ROM port
(cartridge port) of every 16/32 Atari (ST, TT, Falcon). On accelerated
Falcons speeds of upto 400kbytes/sec have been reported. Please see:

ARAnyM 0.6.6 has just been released. This new version offers the JIT
(just-in-time) compiler for our CPU that converts the m68k instructions
to i386 instructions on-the-fly (similarly to what JAVA VM does). This
causes up to 10x faster execution of m68k code on i386 host platform.

Visit the ARAnyM web pages for more information, download or the
screenshots section that clearly shows the immense power of GEM
applications running on the right TOS machine.

Originally written by Thomas Much, OLGA has offered linking of objects
under GEM for any applications supporting the protocol. However, since
the original programmer moved on to work with other platforms, OLGA has
not been updated since back in 1998.

This might be about to change now, since Dutch Programmer Henk Robbers
(XaAES, TT-Digger) has expressed that he wishes to maintain future
versions of OLGA.

Petr Stehlik has announced:

New version of Aranym, the not yet well known Atari/TOS compatible, completely free, high power virtual machine aiming at fulfilling all needs of serious Atari users has been released. This new version is working on Mac OS X and contains a small IKBD fix that allows running the GFA Basic. All info, source and binary packages for most favorite operating systems are (or soon will be) available at the URL below.

Also please let me clear up the smoke that appeared after I used a "TOS clone" title for aranym last time. After a careful analysis by a group of dedicated people in comp.sys.atari.st we have found out that neither Aranym, Milan, Medusa, Hades nor any other non-Atari brand machine is a "TOS clone". The only TOS clone known today is EmuTOS, which is used as the boot heart of our aranym, BTW.

All the machines that run TOS can safely be called TOS machines and so Hades, Milan and Aranym are all TOS machines (with the noticeable exception that Aranym is a virtual machine, meaning that it can run on virtually any hardware :-)

Hi,

on http://mico-mint.atari.org you will find a brandnew little tool for
rpm (Redhat Package Manager) under MiNT.
In the moment it is in german only, so if you you want an english
version, translate it.:)

Ciao

Marc-Ant[illegible]n

Xref: archiver1.google.com comp.sys.atari.announce:308

KEYTAB 09 available

KEYTAB 09 is released on 2002-10-28 as a Bugfix for KEYTAB 08. KEYTAB is
a little system utility which offers routines for converting chars
between charsets (i.e. Atari->Windows ANSI, ISO-8859-1 (ISO Latin1) ->
Atari, etc.). KEYTAB is freeware incl. utilities, the library for
developers (Pure-C, GNU-C, Pure Pascal, GFA) and all sources.

The implemented charsets are: Atari, Windows Codepage 1252, Macintosh (or
Apple Roman), MS-DOS Codepage 437, MS-DOS Codepage 850, US-ASCII,
ISO-8859-1 (or ISO Latin 1), ISO-8859-2, ISO-8859-3, ISO-8859-4,
ISO-8859-7, ISO-8859-8, ISO-8859-9, ISO-8859-15, Sinclair QL, NeXTStep,
IBM Codepage 437, IBM Codepage 850, ISO-646-US, ISO-646-DE.

Furthermore there are unicode conversions: from any of the supported
charsets chars and memory blocks can be converted to unicode and
backwards.

In addition to the Conversions of 8-Bit-Charsets there are
unicode-docings with variable length UTF-8, UTF-7 and UTF-7,5, UTF-16
and UCS-4 (UTF=Unix Transformation Format).

With the implemented functions there are conversions between all charsets
incl. the unicode-codings in any other charset - internally via the atari
charset or via unicode.

KEYTAB can be downloaded from <http://acspro.atari.org/>.

Gruss

     Martin   [PGP-Key available]

The Sirius Cybernetics Corporation in heavy cooperation with Dune and
Sector One has just released "Undercover Magascene # 23" last night.
There are two versions available, a full featured one for Falcon and
harddisk based ST systems and a lite one for diskbased ST systems...
Online version in preperation...

Development on HighWire is still going on after a summer break. So
what's new in this release?

HighWire now supports SOME of the FORM tags with place holders, not all
tags are currently supported at this time. Also, HighWire supports
displaying of TTF fonts in 8 bit mode only. The TTF support isn't that
pretty yet, but at least useable.

Change.Log for this release:

- Multiple Windows are now supported for the frame target "_blank".
Also ALT+ mouse click on a link opens it in a new window.

- Displaying of non-Speedo fonts is working now so far.

- Implementation of wheel mouse support.

- Realtime scrolling for slider usage.

- Highlighting of links improved. If the mouse pointer is over a link
the target will be shown in the window's info line.

- Improved parser function to also recognize quotation.

- Overworked text floating around images and tables.

- Slightly improved Nearest Colour algorithm for resolutions <=256
colours

- Closed some memory leaks

To download and more information, visit the HighWire website

The full text of Hi-Res Magazine is now online at the Classic Computer
Magazine Archive.

    http://www.atarimagazines.com

Hi-Res was a short-lived magazine, published from 1983 to 1984,
dedicated to the Atari 8-Bit and Commodore 64 computers. The archive
includes the full text of (all?) four issues. (The publisher recalls
that six issues were published, but no one we consulted has seen issues
beyond number four. If anyone can verify the existence of issues 5 and
6, please let me know.)

Highlights include:

Atari, Inc.: The Early Years, An Unauthorized History
    http://www.atarimagazines.com/hi-res/v1n1/atarihistory.php

Video Game Guru - Activision's David Crane
    http://www.atarimagazines.com/hi-res/v1n2/davidcrane.php

Preview of the Commodore 264 Computer
    http://www.atarimagazines.com/hi-res/v1n4/the264.php

Club Med & Atari
    http://www.atarimagazines.com/hi-res/v1n3/clubmedatari.php

34 Atari and C64 Software Reviews
    http://www.atarimagazines.com/hi-res/index/showreviews.php

Enjoy!

D.B�r�ziat has annnounced:

Please find on official WinDom web site
(http://windom.atari.org) the last version of
the GEM WinDom C-library 1.20.

Moreover, DFRM, a WinDom companion library
is released on http://windom.atari.org/dfrm. This
library allow you to build object structure without
using an resource editor in a similar way than
GTK+.

These libraries are available for PureC, Sozobon,
Gcc 2.8.1 and Gcc 2.9.5 and both are open-source.

Foundation Two has released "Bremspunkt",a top down racing game in the
tradition of "Super Sprint" for the ATARI XL/XE . The unconventional
feature of the game is the ability to play with 4 players. Therefore the
requirement is the Multijoy 8 Interface.

The game allready won the title: "Best of Show - Game" at the ABBUC JHV
2002

Version 3.1 of Atari800Win PLus has been released. The emulator is based
on Atari800 kernel 1.2.4 (with the latest changes) and has lots of new
features like network games support using Kaillera library, sector
counter, emulation of XL/XE machines with memory capacity of range from
16 KB to 1088 KB, large XEGS cartridges, MegaCart cartridges and
switchable XEGS cartridges support, emulation of MultiJoy4 interface.

Three new articles added to MyAtari.com. The history of Atari's
underrated 7800 console is explained, Del McCool supplements our iPaq
article with an alternative route to portable Atari computing and
finally we get some information on the Galaxy graphics card from a beta
user.

Mathy van Nisselroy has announced:

I just put the latest version of my CD audio player on my website at
http://www-users.rwth-aachen.de/mathy.van_nisselroy

If you could please test the 'O' command, which should now work each
time as it should with tray, caddy and slot-in CD-ROM mechanisms. If
you have a CD with or then 48 but less then 73 tracks, please test if
the right track shows up when the software is started. Please read the
textfile. It explains in more detail how to use CDAP.

CU   Mathy van Nisselroy

The Reservoir Gods released a new title for the ST serie of machines
(from the humble ST to TT's and Falcon) today.

As the title suggests, it's juggling game, and it features enhanced
audio on STe, TT and Falcon.

Anodyne software has created drivers for the Daynaport SCSI ethernet
cards. The cards and drivers are suitable for Atari TT and Falcon, and
also for ST's with a SCSI adapter capable of bus arbitration.

This is indeed good news for those wanting a quick ethernet solution for
their Falcon. However, the drivers are only available for Sting and not
for MiNTNet/MagiCNet, which drasticly reduces the useability for many
people. However such drivers are expected shortly.

Shiuming Lai has announced:

This month sees the results of the eagerly anticipated MyAtari 2002
Awards. Following weeks of nominations and over 1,700 votes, the winners
of the MyAtari 2002 Awards have now been announced. Congratulations to
all the nominees and a big thank you to everyone who took the time to
vote. Sadly, there can only be one winner per category.

The Calamus Positioner module is updated by a bugfixed version 2.03. A
demand for the upgrade is that v2 is already present as well as Calamus
2002.

And the Calamus Align Tools module is also present in a new bugfixed
version 2.02. The same demand applies for the Align Tool as for the
Positioner module.

The team at atariarchives.org is proud to announce that two more classic
Atari books are now available at http://www.atariarchives.org --
bringing the number of books at the site to seven.

The two books are:

Atari Basic - A Self-Teaching Guide, by Bob Albrecht, LeRoy Finkel, and
Jerald R. Brow, published 1979. This 330-plus page book is an
introduction to Atari BASIC.
     http://www.atariarchives.org/basic/

...and...

Computer Animation Primer, by David Fox and Mitchell Waite, published
1979. This 500-plus page book is a great general introduction to
computer animation, and includes downloadable BASIC and machine language
programs for doing animation on Atari 8-bit computers.
     http://www.atariarchives.org/cap/

Highlights include a section on The Making of TRON
(http://www.atariarchives.org/cap/showpage.php?page=125) and a 16-page
section featuring color animation stills.
(http://www.atariarchives.org/cap/thumbs.php?page=color1)

Thanks to the authors for allowing us to share their work.

The Level 9 Interpreter 2.0 has been ported successfully to the Atari.
L9 2.0 is used to play classic Level 9 text adventures of the 80's on
today's computers. Level 9 had big success especially in England with
relatively simple adventures which fitted on a single cassette. They
were also known as Britain's answer to Infocom. The interpreter plays
all old Level 9 games but it does not show graphics. Game files are
required but don't have to be obtained from the ST versions of the games.

Holmes has announced:

Just to let everyone know, all the games that were on my 'have' list have
been uploaded and put online, all 4000+ images, sorry for the 'seperate'
disks, just alot easier for me to get them up to share. This is the
first MAJOR update of the games on my site for over a year. :-) All
older dumps have been replaced with either new dumps, or better
versions. Heaps of new cheat versions of games too. Anyway, go grab
some games...

http://www.atariworld.com
or
http://homepages.paradise.net.nz/atari

Keep those 8bit's humming!

Holmes...

There's now a small Software Library at www.atariarchives.org - it
consists of a few Atari 8-bit applications that we've received
permission to share:

- Simax Video Signmaker

- SCREENS
- Slime
- Fort Apocalypse
- Dimension X
- Shark

Let the Midwest Classic take you back to the glory days of personal
computers,when people had choices beyond a Windows or Macintosh based
computer. Sponsored in conjunction with the Classic Gaming Museum, the
Classic Computing Museum

features a large display of 8 bit and 16 bit computers from the
industry's beginnings in 1975 through to the last days of the 16 bit
computers in the early 90's.

Of special note this year is a large section devoted entirely to Atari

computers, and will include many hard to find Atari peripherals in their pristine condition. Visitors will also have the opportunity to leave their mark on this historical event by stopping by at the Atari 400 Guest Station, where they can enter their name and a personal saying for other visitors to read.

The Classic Computing Museum will have a large selection of items on display for visitors to see, learn about and play. Each display will contain a small description and history of the items in the display. Not all items on display will be playable. Classic computing expert and ClassicGaming.Com editor Marty Goldberg will be on hand to answe visitors questions and guide them down memory lane.

"I look forward to exposing people to a rich and vibrant history they may not be aware of." said Marty. "Likewise," he continued, "those who are old hats to the subject will be pleasantly surprised as well by the extent of the display. Definately something for everyone."

More information about the Midwest Classic may be found at the Official Midwest Classic Web site at the GOAT Store, LLC (http://www.goatstore.com). Dan Loosen can be reached at loosen@goatstore.com and Gary Heil can be reached at heil@goatstore.com for more information on the event.

The Reservoir Gods announce the release of their new game "GodPey".

Loosely based on the popular Bandai Wonderswan title "GunPey", the RG
version is packed with new features and enhancements.

The game is an arcade puzzle game with a multitude of game modes. As you
play the game you earn experience points that unlock new areas, new
characters, secrets and extras.

"GodPey" can be played as single player experience, but you can also
compete in multiplayer head to head battles with your mates.

As you gain experience and open new sections of the game, you will
finally unlock the story mode, an epic quest which takes you to a
variety of locations where you battle many different monsters in order
to regain your vegetables.

The game features 14 exclusive pieces of new SID chip music, stereo
sampled sound and 32 colours on screen. It supports all conventional
controllers including jaguar pads.

"GodPey" runs on all Atari machines, but requires a minimum of 1MB of
memory. It detects the hardware it is running on and will utilise extra
features such as blitter accelerated graphics, enhanced palettes and DMA
sound.

You can download "GodPey" from:

Here is a new version of Extract Icon that you

will be able to download on my site. A lot of news to the menu...

Best regard,

Florent LAFABRIE

WARNING : I research for a person for the translation an english and deutch of the RSC file and the HYP help file. Thank's for your support.

Welcome in this new version,

Novelties :

- Support of icons to the XPM format (Linux).
- Support of the DRAG protocol DROP and toward INTERFACE.
- Support of the DRAG DROP and of a file on the icon of the program under TOS, Mint and Magic.
- Possibility to associate the ICO files, CUR, ANI, ICL, DLL and XPM to the program (Newdesk, Jinnee, Thing...).
- Support of the AV protocol toward ZOOM, RSM and INTERFACE.
- Support of the long filenames under Magic and Mint.
- Utilization of routines NVDI 5.xx for the transfer of an icon 8 bit in fashion 4 and 1 bit (with or no dithering).
- Themes for desktop and windows.
- Possibility to see the RSC files in 256, 16 and 2 colors.
- Possibility to suppress the window of treatment in order to use another program in multitask fashion.
- New window of information on the material and the used fashion video.
- New file for ST-guide.

- By default, the file for ST-guide is read since the repertory of ICON Extract, otherwise in the repertory of the HYP files specified in the ST-GUIDE.INF file.
- New files of configuration (incorporation of themes of desktop and window).

Following bug corrections :

- Redraw correct of windows of the application under Magic.
- Redraw correct of the bar of the main window at the time of a displacement.
- Rewrite of the ICONIFY routines and ALLICONIFY.
- Display correct of bars of windows of the other applications in multitask mode.
- Programs is no more blocking in multitask mode.
- Programs functions now in all graphic fashions (1 bit to the 32 bits).
- The allocated memory is henceforth correct. Thank's to Eric REBOUX for the MEMDEBUG program.

While the HighWire development team works on resolving a few last bugs
before the next beta release, you can now get a glimpse of what lies
ahead.

There are 4 new screenshots available on the HighWire site and as can be
seen there, the support for graphics is what will be the big addition to
the upcoming HighWire release!

If you are curious about what HighWire is capable of at this point, you
need to pay the site a visit :)

http://highwire.atari-users.net

P.S. We now have a new Highwire Users mailing list, visit the Highwire
site for information on joining the list.

MyAtari has just published three new articles. Christoph Brincken shows
how to convert Calamus fonts to other formats and takes a look at the
new updated Porthos 2 PDF reader. Tim Conrardy adds some musical
seasoning while David Winter traces the history on Pong and its
spin-offs.

Halcyon Days: Interviews with Classic Video and Computer Programmers has
is now available online. This is a book of interviews with 8-bit game
programmers that I read years ago when it cost $20. There's an Atari
bias among the choice of interviewees, even including some authors of
games only available through the Atari Program Exchange.

The Reservoir Gods announce the release of their new game "GodPey".

Loosely based on the popular Bandai Wonderswan title "GunPey", the RG version is packed with new features and enhancements.

The game is an arcade puzzle game with a multitude of game modes. As you play the game you earn experience points that unlock new areas, new characters, secrets and extras.

"GodPey" can be played as single player experience, but you can also compete in multiplayer head to head battles with your mates.

As you gain experience and open new sections of the game, you will finally unlock the story mode, an epic quest which takes you to a variety of locations where you battle many different monsters in order to regain your vegetables.

The game features 14 exclusive pieces of new SID chip music, stereo sampled sound and 32 colours on screen. It supports all conventional controllers including jaguar pads.

"GodPey" runs on all Atari machines, but requires a minimum of 1MB of memory. It detects the hardware it is running on and will utilise extra features such as blitter accelerated graphics, enhanced palettes and DMA sound.

You can download "GodPey" from:

http://rg.atari.org

About Reservoir Gods.:

Reservoir Gods have been creating software for Atari machines since "back in the day" (1994). Their games include the Tautology series, Double Bobble 2000 and the award winning Chu Chu Rocket. They were also the first to create Nintendo Gameboy and NES emulators for the Falcon.

Reservoir Gods have also created a number of demos and tools for Atari machines including the paint package 'GodPaint' and are also responsible for the legendary disk magazine 'Maggie'.

The HighWire development team has released a new HighWire v0.06A Public
Preview. This version has been released to show people that bug fixing
and improvements are being worked on. To see a list of changes, please
read the HISTORY.TXT file in the release ZIP or the Change.log file on
the HighWire site.

It is also being release with the hope that bugs can be tracked down
quicker with the help of the Atari Community. Please report any bugs to
the HighWire Development Team using the HighWire bug tracker on
http://highwire.atari-users.net

A new version of Atari800 emulator that emulates Atari 400/800, Atari
XL/XE series and Atari 5200 (with many extensions like 320 kB RAM or
stereo sound) has been released and is available for download at
Sourceforge.net. This version fixes a couple of bugs hidden in previous
versions and adds some new interesting features. This highly portable
emulator can run on just about any machine and operating system.
Binaries are (or soon will be) available for Linux, X11, DOS, TOS,
Windows, WinCE and more.

A new card game for the ST series of computers is released. It's called
Red Cat Rummy 500 and has mainly been made in the late nighties but was
put on ice, until now when it's out at last.

Red Cat Rummy 500 can be downloaded from the DHS 'Scenenews'.

The cps-games site has been updated to include our progress towards
brining affordable ST upgrades into action. View our progress online as
we invent and build more kits. WE also have a forsale section selling
used and new Atari parts. Pages get updated weekly, this week our first
1.44meg external drive was built and put into action!

The publishers of ALIVE have announced:

In spite of a small delay, we've managed to release the fifth issue of
our diskmag ALIVE. This time it comes as an ST version AND a Falcon one,
each of them with a specific intro. We hope you'll like the exclusive
music and gfx as well as the 70 articles offered by this issue.

The folks at Reservoir Gods have announced:

We are pleased to announce the launch of a new website for Reservoir
Gods:

http://www.reservoir-gods.com

Here you can find all our atari productions: games, demos, emulators,
tools and issues of Maggie diskzine.

We have also launched a high scores competition for our latest game
"GodPey". To compete in this, please send your GODPEY.SAV file to
pink@reservoir-gods.com

The ultimate Atari XL/XE music collection has been updated to v2.4. This
update adds 94 new songs and fixes several credits errors. The total
number of songs in the archive is 1480. Get the archive and players for
various platforms at the archive homepage.

Version 2.3 of Steem has been released. There are lots of changes, here
is a taste of what is new:

-- Bug Fixes --

. Prefetch bug fixed thanks to S�bastien Molines (Subutteo, Anomaly
Megademo protection)

. Absolute mouse button flags thanks to S�bastien Molines (Cochon Qui
Ait)

. VAP reload timing (some ULM fullscreens)

. MFP clock (more ULM fullscreens, Captain Blood)

. Tighter top overscan timings (NeoShow)

. PSG register masking (FOF menus, BBC Mindbomb screen)

. HBL pending past next HBL bug

. Obsession patch

. STE shifter screen widening feature/bug (Obsession)

. Small asr.l flag bug (Medway Boys 75)

. Fixed lots of snapshot timing bugs (Lethal Xcess)

---- New Features ----

. Extended monitor resolutions

. Paste text into ST

. RAR archive support

. Independent left-right shift in shortcuts and joysticks

. Automatic fast forward on disk access option

. Screenshot format option (Windows only, needs FreeImage library)

. Press ST Key -> for keypad enter

. Auto update links

. XSteem: 8-bit colour depth support

. XSteem: External devices (experimental)

. XSteem: Screenshots

. Debug: Added step over button

The full text and program code from De Re Atari, a classic guide to
effective Atari 8-bit programming, is now available at
www.atariarchives.org/dere/

It includes downloadable program code and the programmer's reference
card that accompanied the original book.

This is the eighth online book made available by AtariArchives.org.

R.O.M. logicware has released Papyrus version 9.2 for Atari. Papyrus is
one of the best wordprocessing/ dtp/database programs for Atari.

For version 9.x there will be more upgrades, but R.O.M. logicware will
never release a version 10 for Atari. Development for other platforms
have priority and this is the reason that version 9.2 took so long.

I have several big announceements from www.atarimagazines.com

The site now offers the full text of every issue of STart magazine.
Published from 1986 to 1991, STart magazine was dedicated primarily to
Atari ST computers, with some emphasis on Atari 8-bit computers in later
issues.

In addition, the site now includes full-text articles from Creative
Computing magazine. The archive currently offers the full text of 35
issues, spanning Creative Computing's final three years -- more than
1,100 articles. Published from 1974 until 1984, Creative Computing was a
wonderful magazine for computer hobbyists that covered every platform.

The archive includes articles written by Clive Sinclair, Adam Osborne,
Bill Gates, and other notable names. We're looking for volunteers to
help scan more articles from Creative Computing.

Finally, we have changed the name of the site from Digital Antic Project
to Classic Computer Magazine Archive. Originally the site had only the
full text of Antic magazine -- with the addition of STart and Creative
Computing, "Digital Antic" was an increasingly inaccurate name.

Organization: Cox Communications
Xref: archiver1.google.com comp.sys.atari.announce:265

1. What is the Atari 8-bit PPP/DGS PC CD-ROM?

I have created a PC CD-ROM containing commercial (NOT PD) Atari 8-bit software published by Power Per Post (PPP) and Dean Garraghty Software (DGS). The CD contains the software in both DCM and ATR formats. When the DCM files are transferred to the Atari (by various suitable methods) they will convert back into bootable Atari disks by use of Disk Communicator 3 or above (a freely available Atari 8-bit PD product). The ATR files are for use with PC Atari 8-bit emulators (such as XL-It!), some of which are free and available on the Internet. Each product is supplied with a full manual in PDF format. The Adobe Acrobat Reader (a free product) is required to read/print these.

2. What does the CD contain?

The CD contains the following products:

* Quick Programming language V2.2 (latest version) and V2.1 (for compatibility with older QUICK sources)
* Quick Support Disks 1 and 2
* SAM (Screen Aided Management) V1.25i (80-col desktop system, similar to GEM - no additional hardware needed)
* SAM Budget (spreadsheet)
* SAM Designer (DTP/designer package with circuit diagram creation facilities)
* SAM Utility Extensions (conversion between SAM and non-SAM formats)
* 4 Power Per Post games: Rubber Ball, Glaggs It!, Bombi, Mine Sweeper
* QuickEd (Character set editor for mouse, joystick and touch tablet)
* Digi-Studio (digitized sounds/music utility)
* Issues 1-14 of our News-Disk on-disk magazine
* Issues 15-19 of the printed magazine carrying on from the on-disk mag (scans of the original mags)
* Issues 20-26(last issue) of the on-disk magazine carrying on from the printed mags
* News-Disk Yearly Disk 1 (disk to go with the printed mags, includes lots of Quick source code)

3. What does the CD cost?

U.S based users: The CD costs just US$15 when bought on-line using your credit/debit/charge card via the *secure* PayPal, which INCLUDES shipping. You may, if you prefer, pay in cash in US$. However, cash is sent at your own risk and is subject to higher exchange fees. For this reason, the cash price is US$20 which INCLUDES shipping.

U.K based users: The CD costs just £10 including P&P. You may order by cheque.

Users in other countries: The CD costs just UK£10 INCLUDING shipping. Please pay in cash in UK£.

4. How do I order?

Please go to my website at http://www.dgs.clara.net and then click the link to the CD-ROM info/order page. You will find full ordering information, along with extended information on each product on the CD. There are also screen grabs of the PPP software running in the XL-It! PC emulator.

5. How long will it take for my order to arrive?

Delivery times from the UK to the US are about 5-10 days, depending on where you live. Orders are dispatched within 24 hours when ordered on-line. Please be aware of time zone differences. Most orders arrive during the night here, so please take this into account.

6. Special Notes

Please note that due to legal reasons, I am not allowed to sell this CD to anyone living in Germany, Austria, or Switzerland.

The PPP products do not run on the 1200XL. They do run OK in most PC emulators. Digi-Studio does not run on most PC emulators, but does run fine on all Atari XL/XE machines.

The products are offered without support, but are all mature versions and have no known problems.

.

A new preview of the Wolfenstein port to the ST has been released by Ray of .tSCc. There are no baddies or weapons yet, but it does feature higher resolution texture-mapped walls (compared to the previous version), doors that work, and the "traditional" Wolf3d control system. (Alt to strafe, shift to run etc)

What's more, it runs in full screen mode on any 1 meg ST at a playable frame rate! It should also run on clones, according to the author, who tests on a TT and an ST.

Hit the link to download the demo

Gemma is a new TOS-look that provides all windows with a fresh and
innovative design that can compete with the look of other operating
systems. It is optimized for modern screen resolutions and color depths.

I'm glad to announce a website dedicated to the Eclipse for the Atari

Falcon030. The purpose of EOSP is to provide help and information for
users in setting up the Eclipse. Users are also able to share experiences
with each other and provide help where needed. Please check it out and
feel free to submit any kind of contribution. Thank you.

The bbs is no longer *telnet* based, but is now *ssh* based. This is more
secure, but more importantly, itsn't being screwed up by my ISP right now.
So, you can use your own ssh client, or just use the webpage to get to the
bbs. (The website now features an ssh client built right into it!)

http://www.skeleton.org/bbsindex.html, or use your own ssh client.

LOGIN is "bbsssh" (bbs and ssh put together). Password is "bbsssh" (same
thing again).

BugFix for Joe - HTML editor (1.48 version)

- ISO-8859-1 Filter. You can use no more &entities; (please read the
bugfixes.txt)

- fixed a big crash during communication between Joe and its modules.

- menu and dialog box slowliness corrected under MiNT.

- use of XRSC for external ressource files (RGF method).

- keyboard overrun behavior improvement.

- some internal small bugfixes

- Well formed HTML. You can desactivate it (ie -> old).

The GFA sources of Rosemary Rancoon's Strip Game and its development tool
(image convertor) are also available, under the "Schmilblick Goes Forward"
license. That means you can do what you want with it.

Read and save all your original ST disks for ages to come !

Try DISK2FDI: this experimental program lets you transfer nearly all of
your original Atari ST disks from any PC computer with two disk drives.

The highly active development of the GEM-based X-Windows server is going
on at rapid speed. A new update was released today with the following

additions:

- Implemented support for 16/24/32 bits color depth graphic modes.

- Fixed a tricky bug which was responsible for white drawings over white
background on graphic depths >= 16 bits.

- Fixed a bug which crashes the AES if a client tryes to change the root
window (desktop) background.

Download it from the URL below.

I am proud to announce the Atari Program Exchange archive.

     http://www.atariarchives.org/APX/

The APX archive offers information about the Atari Program Exchange and
downloadable software. All the software that's avaialble is with the
permission of the copyright holders, so it's nice 'n legal.

Currently, 62 APX titles are available for download. A list of
downloadable titles is below. The archive is far from complete, but this
is a start. Even if a program isn't downloadable, the site offers
information about it.

Want to help? If you can put me in touch with APX authors that haven't yet
been contacted, or provide APX software/catalogs that aren't yet accounted
for, the archive will be better for it.

--Kevin Savetz

The freeware and open-source replacement AES for (Free)MiNT is upgraded to
version 0.93. The most important changes and improvments are:

1 Put the text in the about dialogue in a listbox.
Ok buttons in all XaAESs own dialogues.

2 Fix in handling paths set by a client before AES calls (notably
rsrc_load and shel_find.

3 Fix in iconified windows. (Slider info got lost)

4   Fix in form_alert: Alerts with 2 or less lines are now shrunken
     in height as well. :-)

5   Slight implrovement in window title display: If a name doesnt fit,
leading and trailing spaces are removed and the title is refitted.

6   Technical improvements (not visible)

7   Sometimes a frame in listboxes was drawn in white. Inserted a missing
colour setting.

8   Icons are drawn correctly in higher or true colours.
     Thanks Mario Becroft. ;-)

9   Reorganization of the lump and chaotic Launch function;
     Extended shell_write SW_PDEFDIR implemented.

10   Implementation of the hider widget and hiding.

11   Implementation of appl_control.

12   At last got ctrl+alt+tab working correctly.

13   Implementation of ctrl+alt+[V,X,Y]
         V: unhode all.
         X: hide other
         Y: hide this

14   XaAES extension to appl_search for taskbar programs. (Read the
history file).

For those of you, who are interested in coding operating systems for
the Atari or it's emulators EmuTOS could be interesting:

EmuTOS is a singleuser singletasking operating system for Atari ST
computer emulators. Today it is just (more or less) running on STonX.
But my intention is to have it running on every Atari ST emulator
available some day.

It is thought as a replacement for the TOS-images you usually need
today on these emulators.

EmuTOS is based on Digital Research's GEMDOS sources, which was made
available under GPL license in 1999 by Caldera - and so is EmuTOS.

You will find it at:

http://www.mucl.de/~mdoering/emutos/en

Hello,
Excuse me for my english.

Here is the new version of Icon Extract 1.2. This one supports icons 32 bits of XP windows. The interfacing in fashion 2 and 16 colors have been improven and the display is correct in monochrome fashion.
Small recall, this program permits to recover icons windows to the ICO format, CUR, ANI as well as librerians of icons to the ICL format and DLL. All icons in 2, 16, 256 and True Color (24 and 32 bits) are saved in a RSC file (as the DESKICON.RSC). A RSC file is created for every size of icon (16, 32, 48, 64, 72, 96 and 128 pixels).
The installation is achieved with GEM Setup 2.01.
It is recommended to have a fast machine (68030 + 68881/2) or to work with Magic PC or Magic Mac.
Good downloading and see you later for the version 1.3 (suuport of the XPM files of the Linux world). Bests regards,

F.LAFABRIE

The realtime strategy game STune has been released in Version 0.90, which
includes many improvements and bugfixes. Especially you can now select up
to nine units at once. You have even the possibility to build five groups
of selected units.

After years of waiting, Painium Disaster is finally released. It is a
Shoot'em up in Wings of Death style for Atari Falcon. It features 25 fps
gameplay, hicolour graphics, 8 channel sound and some nice animated
sequences.

Xref: archiver1.google.com comp.sys.atari.announce:138

comp.sys.atari.announce is a moderated newsgroup dedicated
to news relevant to Atari computer users.

** Guidelines for posting to comp.sys.atari.announce **

comp.sys.atari.announce is a moderated newsgroup. In order to be approved,
posts must offer news relevant to Atari computer users.

What kinds of posts will be approved?
   * Relevant to Atari computers: 8-bit, ST/TT/Falcon, Portfolio,
     Atari's PC clones, or clones of Atari computers.
   * Topics may include software, hardware, Web sites and other Internet
     resources, events, emulators, and other news relevant to Atari users.
   * Commercial posts and press releases are acceptable.

What kinds of posts will not be approved?
   * Any post that is not relevant to Atari computer users.
   * For sale posts are generally not approved unless they come
     from a developer or dealer that wishes to announce new pricing
     for product. Sale or auction announcements from end users will
     not be approved unless they are, for some reason, extraordinary.
   * Posts that are not informative.
   * Posts that are not in English.
   * Posts that aren't reasonably understandable (due to, for instance,
     significant grammar problems.)

How do I post a message?
   * Simply use your newsreader to post your message to
     comp.sys.atari.announce.
   * Alternatively, you may e-mail your post to csaa@savetz.com
   * Please do not crosspost. You are welcome to post your announcement
     on other relevant newsgroups (for instance, comp.sys.atari.st
     or .8bit) but please do so as a separate posting.
   * Your post will be reviewed by the moderator, within a few days.
     If accepted, it will then be posted to the newsgroup. If it is
     rejected, you will receive an explanation via e-mail.

How do I follow up to announcements?
   * Followups to c.s.a.a announcements should be posted to
     a relevant Atari discussion group such as comp.sys.atari.8bit or
     comp.sys.atari.st. Followups should not be posted to c.s.a.a.

A new Site is born!

The aim is to have almost all information of programming the XL/XE and
have a contactlist to all active users.

Of course there is a download area and we will have tips & tricks for
gaming and so on.

Have a look!

I am proud to announce that the September issue of MyAtari magazine can
now be downloaded from our site, http://www.myatari.net. At almost 5MB,
it's our biggest issue ever!

The issue includes artilces on how to get fit using your ST/Falcon, create
a musical masterpiece with Schoenberg Composer and compose music under
emulation as well as an exclusive report from the recent Unconventional
Party in Germany and a review of the MyMail 1.50.

Check it out!

Guildford, Surrey - September 2001. The Reservoir Gods announce the imminent release of "Chu Chu Rocket"; an arcade puzzle game for the Atari STe and Falcon030.

"Chu Chu Rocket" originally appeared on the 128-bit Sega Dreamcast console and immediately gained critical acclaim for its innovative and addictive gameplay.

"Chu Chu Rocket" is a game for 1 to 4 players. It incorporates a number of different modes of play including a four player battles, single player puzzle levels and co-operative challenge stages.

The base machine for the game is the Atari STe, it was felt that this was the minimum requirement to achieve a comparable gaming experience to the 128-bit original. The extra hardware features of this machine are used to their fullest extent, including the blitter, extended palettes, jaguar pad support and stereo sampled sound.

The game features graphics by "shTHREE" and new Reservoir Gods member "neo". It also has an unprecedented 13 pieces of exclusive new Sid-Sound music composed by the award winning "MSG".

All the original sound effects from the DreamCast version have been sampled for this version, including all the sampled speech.

The game features 100 levels of puzzles across 4 different worlds, 25 levels of multiplayer gaming and 25 challenge stages. There are extra secret features which get unlocked on completing sections of the game.

Reservoir Gods were formed in 1994 as a software team developing products

for Atari computers. There releases to date include the games "Double Bobble 2000", "Tautology 2", "SkyFall", "Static" and "Bunion Canyon". They have also created the art package "GodPaint", GameBoy emulator "GodBoy", Nintendo NES emulator "GodleNES" and have been responsible for the disk magazine "Maggie".

After a period of inactivity, they are now hard at work creating new products for the Atari platform, ably supported by new members "neo" and technical specialist "Griff" (formerly of "Inner Circle").

"Chu Chu Rocket" is set to ship in October 2001.

Available for an early preview is a "sampler edition" of the upcoming EZine which will feature articles dealing exclusively with the Atari 8-bit line of microcomputers. The full issue is tenatively slated for online release on November 10, 2001, so if you have suggestions or critique or know something you would like to see incorporated, there is still enough time to contact me. Adobe Reader (free from http://www.adobe.com) is needed to view the sampler edition. You can find the EZine here:

After receiving an email from infogrames, the AI organization needs to
change their name. So if you want to suggest one (that doesn't make use of
the word Atari), go to the AI (now called NONAME) site.

Atari community goes international with new organization to promote Atari computers

October 4, 2001 -- A group of users and programmers from around the world have collected their skills and resources to create Atari International, a global, Internet based organization dedicated to supporting the users and developers of Atari hardware and software, as well as to promote the platform.

The new organization seeks to show the world that its perception of the Atari as "The bygone days of" or as "outdated" or "retro", is a misconception. Thousands of people across the globe regularly use Atari machines, emulators, or modernized clones for everyday computer uses, and even some business ones. They see that, while most of the hardware may be outdated by today's specifications, Atari machines where built so well, and the programs written so efficiently, that you don't need today's super-powerful machines to get the same work done.

Atari International (A.I.) exists to serve several needs. One is that existing Atari users are frequently at a loss when it came to getting answers, parts, or programs for their Atari computers or game systems. Another is that computer companies like Milan Computers and Medusa do not make it easy for people outside their respective countries (Germany and Switzerland) to obtain their Atari related products, which is of concern to Atari users everywhere since these companies make the most advanced Atari-clone computers available today.

The third need, and possibly the most important, is Atari's public image. Most people see the Atari world as being nothing more than some fond memories of Pac Man or Pong. In truth, not only do people use these computers for modern uses (Internet, business, etc), but that there are also companies (like the ones previously mentioned) that are continuing to develop the Atari architecture and operating systems, or clones thereof. The members of A.I. believe that with sufficient support, these companies could produce exceptional machines that could satisfy most if not all the needs of most home computer users, and many business ones as well.

A.I. seeks to perform many tasks to these ends. They will provide informative articles directed at the common computer user telling them about the current state of Atari computer systems, what they are capable of, and how to get them. There will be information connecting existing Atari users to the resources they require to use and update their systems.

Also, dialogues will be established with Atari related companies
(including the current owner of the Atari name, Infogrammes), encouraging
them to continue to develop and support their products, and to broaden
their marketing to outside their native counties, if that appears to be a
problem with them. There will also be workshops and tutorials for those
wishing to learn how use Atari computers, or even program for them.

The primary contact point for Atari International is their web page:
www.atari-international.org

They can be reached via e-mail at ai@atari-international.org.

"Atari International is a non-profit organization working to educate the
public about the Atari platform as a feasible alternative for many
computer needs, as well as be a resource for those interested in acquiring
Atari hardware, software, and support."

As you probably know, my homepage contains POV 3.1g and
Eureka. I generally compile latest version of POV, and
Eureka is my own software, a 2D Graph Describer and 3D
Modeller. A few days ago, POV 3.5 was binary released, so
there's no source for the moment. We can't play with it on
ATARI platforms, it's beta ... But the main improvement was
that a big extension called MegaPOV was included in the
source of POV 3.1g. POV 3.1g + MegaPOV 0.7 is nearly POV

3.5. Well, almost. But waiting for 3.5, it's possible to
play with MegaPOV. You will find it on my page, comming with
the latest release of my Eureka software. This software
export POV, VRML (this is interactive), 3D2, EB_Model
etc ... I strongly recommend both to you, if you are
interested by image synthesis.

Have great fun,

Regards,

I'm proud to announce version 2.7.0 of CC65, a C crosscompiler /
crossassembler combo for 6502 systems.

CC65 has C and runtime library support for many of the old 6502 machines,
including

  - The Commodore C64, C128 and the C16, C116, Plus/4 machines.
  - The CBM 510 (aka P500), a quite rare Commodore machine (programs
    run in bank 0).
  - The CBM 600/700 family (programs run in bank 1).
  - Newer PET machines (not 2001)
  - The Apple][(library support by Kevin Ruland <kevin@rodin.wustl.edu>)

- The Atari 8 bit machines (thanks to the Atari team: Christian Groessler <cpg@aladdin.de>, Mark Keates <markk@dendrite.co.uk>, Freddy Offenga <taf_offenga@yahoo.com> and David Lloyd, <dmlloyd@atari-central.com>).
- GEOS for the C64 and C128 (GEOSLib by Maciej Witkowiak <ytm@elysium.pl>)

The libraries are fairly portable, so creating a version for other 6502s shouldn't be too much work.

Version 2.7 has a real lot of changes, including a completely rewritten backend. Here is a short list:

- New compiler option --create-dep to create a dependency list for a makefile.

- Option and pragma to generate stack overflow checks (both, parameter and CPU stack).

- Transparent and efficient handling of fixed params in variadic functions.

- Build parameter frames when calling other functions by adjusting the stack once and then storing into this frame instead of pushing each parameter separately.

- More flexible .INCBIN command for the assembler.

- Compiler generates line info for the assembler. The assembler passes this to the linker, which is able to generate files containing this information.

- New, much improved compiler backend.

- The literal pool works now without a hardcoded limit.

- C functions may now be declared as __fastcall__.

- New #elif preprocessor directive

- Boolean and and or in preprocessor #if clauses does now work.

- New, improved __asm__ syntax for the inline assembler.

- New code generation for the switch statement.

- Optimizations. Please note that some of the optimizations of the old backend are no longer there, so in rare cases, code may be slower when compiled with this version.

- Symbols may now be defined in the linker config file. This is used for most platforms to define the size of the stack.

- Updated the cc65 utility with all the new command line switches.

- C64 startup code no longer uses fixed stack top.

- Several changed/added runtime functions for better performance.

- CBM BASIC compatible file I/O functions by Marc Rintsch.

- Support for the Commodore 510.

- Mouse routines completed! Mouse support is available for the following systems: Atari, C64, C128, CBM 510 and GEOS.

- Command line response files are now supported to aid those people working with "operating systems" that have a serious command line length limit.

- A new plasma graphics demo written in pure C (by groepaz/hitmen).

- And lots of other minor changes...

There is still no support for the following features:

* Floats and bit fields.

* stdio file routines on most systems. The 8 bit Ataris are the first machines that do have full file I/O support. Please note that the complete CBM family doesn't have stdio file support!

* The 80 column mode on the C128 is not supported by the conio library.

Available packages:

As usual I will provide the complete sources and several binary packages, including RPMs for RedHat Linux. Linux is the primary development platform, so the sources do compile out of the box on Linux machines.

Please note that there are now separate RPMs for the compiler proper and the target specific libraries. To develop for one of the predefined target systems you need the compiler RPM package *and* one of the target machine packages.

Binaries for DOS and and Windows will follow or may already be available at the time you read this. OS/2 packages will again be available, but since there are almost no downloads for OS/2, so the host platform may get dropped in the near future (again). As with the RPM packages, you need the package for the development system (Windows, etc.) *and* one of the target machine packages.

Download:

More information information and a download link, please visit the cc65 web page at

   http://www.cc65.org/

Thanks to all who sent feedback and suggestions and of course to anyone who helped developing cc65!

Hi!

The first release of emutos is out. It is 011023. Get it here:

http://emutos.sourceforge.net

The file will be emutos-011023.tgz on sourceforge. There are not many things to say. Just, that not everything is perfect ;-)

Before baking the release I made the video mode detection going. You can now use EmuTOS also in color modes and the bigscreen option of some emulators also work, but just for mono mode. I have a bug: I think, that the font_ring variable is not initialized. It is given by the 0xa000 function, but there is nothing in. This may be the reason, why in big 16 color modes the system is patched by STonX to use a big font, but the data is from the small one: Garbage is the result. All other modes work!

MiNT is running (for a while). Also the final.tos demo, which is
delivered with STonX.

Read the readme, if you want to make some experiments. Also have a
look on the webpage: http://emutos.sourceforge.net . You will need
some tools, if you want to compile the release the first time (new
user/tester).

The lowlevel disk I/O functions are completely not implemented. This
means, that you just have a chance to let it run on an emulator, which
patches this functionality in, like STonX does.

Here is a list of what may work (file: status.txt):

At first some more general things:
BOOT sequence

-
X configure memory
X execute reset routine
- detect monitor type
  ...
- init floppy drives
- boot floppy
- boot DMA
- run AUTO prgs
X run 'command.prg'
BIOS devices

-
- parallel port
- serial port
X console
X IKBD
X MIDI
X ascii
ACIA interrupt routines

-
- midierr
- ikbderr
X midi input
X ikbd key events
- IKBD clock
- mouse
- joysticks

This is a list of the status of each more or less implemented
function.

Here is, what the first field means:
- Not yet implemented
X Fully implemented
> Partitially implemented
It is followed by the hex-number of the function and it's name:

BIOS Functions

-
X 0x00 getmpb
X 0x01 bconstat (the function works for console only)
X 0x02 bconin (the function works for console only)
X 0x03 bconout (the function works for console only)
> 0x04 rwabs
X 0x05 setexc
X 0x06 tickcal
- 0x07 getbpb
> 0x08 bcostat (the function works for console only)
- 0x09 mediach
X 0x0a drvmap (the function works, but not the devices)
X 0x0b kbshift

XBIOS Functions

-
- 0x00 initmous
- 0x01 ssbrk
X 0x02 _physBase
X 0x03 _logBase
X 0x04 _getRez
> 0x05 _setScreen (the resolution change is ignored)
X 0x06 _setPallete
X 0x07 _setColor
- 0x08 _floprd
- 0x09 _flopwr
- 0x0a _flopfmt
- 0x0b used-by-BIOS
> 0x0c midiws

==== VDI ==

not implemented

==== AES ==

not implemented

Hope you enjoy it! And help and knowhow is always welcome. The next
big thing would be to bring some graphics up, with MiNT, some VDI and
some AES for MiNT. Or if you are experienced with disks?

I am proud to announce the launch of the Official Cleveland Free-Net Atari SIG Archive.

    http://www.atariarchives.org/cfn/

The Cleveland Free-Net, a free dialup and telnet BBS offered through Case Western Reserve University, was home to an active group of Atari users. The Atari SIG (special interest group) had information about every Atari platform, including 8-bit computers, 16/32-bit computers, Jaguar, Lynx, and Portfolio. The Cleveland Free-Net was shut down on September 30, 1999, but before it was, a complete backup of the Atari SIG was made.

Working with the folks who ran the forum, we have endeavored to preserve both the feel of the SIG and the information it contained. This is an amazing resource that exceeds 200 megabytes of data - much of which isn't available elsewhere.

"The Atari SIGOps hoped to preserve this extensive information resource we had built over the years. We approached www.atariarchives.org and Kevin Savetz with the idea of a permanent web archive of our SIG, and we couldn't be happier with the result." --Michael Current, mcurrent@carleton.edu, former 8-bit Atari SIGOp, Cleveland Free-Net Atari SIG.

Among the highlights:

A Time Capsule of Atari news items from 1986 - 1999
    http://www.atariarchives.org/cfn/12/03/

Atari 8-Bit Technical Reference Manual and upgrade guides
    http://www.atariarchives.org/cfn/12/02/

664 ST-related newsletters, including Z*NET and ST Report
    http://www.atariarchives.org/cfn/06/08/

A complete archive of Z*Magazine
    http://www.atariarchives.org/cfn/12/05/02/

Reviews of 79 Lynx games
    http://www.atariarchives.org/cfn/08/07/

Compute!'s First Book of Atari Graphics is now available on
the Web -- full text and all the software. (With permission
of the copyright holder.)

Kudos to Allan Bushman, who did the scanning and HTMLizing;
and Ron Hamilton for doing the code.

HipCrime offers a new service: Custom massive spamming, FREE.

Just post a URL to Free.HipCrime, and a "joe job" spam will be
conducted via both Usenet and Email. Your article will appear
in _every_ newsgroup (even moderated ones), and it is protected
from the filters and cancelbots by the latest in hash busting &
cancel preempting technology. Plus, your message will be sent
to many millions of emails (direct from closed, non-blacklisted
mail servers).

This will give you the best of both worlds: gigantic growth
in your site's traffic, combined with "plausible deniability"
with regards to any complaints.

Your site will become "internet famous" overnight, and a critical
mass of visitors will make it a "net hot spot" for years to come.

Got doubts? Just check with some of our happy customers, whose
traffic rates have recently shot through the roof, for example:

        http://www.osearth.com
        http://www.careermd.com
        http://www.dolphinwave.org
        http://www.spamhunter.co.uk
        http://howardk.moonfall.com/
        http://www.trance-formation.com
        http://www.trance-formation.org
        http://hometown.aol.com/frederi108
        http://www.optional-identity.org.uk/
        http://www.coollist.com/group.cgi?l=nntplist
        http://www.hotboards.com/plus/plus.mirage?who=zodiac_16

HipCrime's ActiveAgent harvests email addresses by crawling the
World Wide Web (HTTP), scanning Usenet Newsgroups (NNTP), or by
loading compressed mega mailing lists (ZIP) like these:

        http://64.227.13.120/here.zip
        http://cyberspacereality.net/flamers/masterantis.zip
        http://cyberspacereality.net/flamers/masterantis2.zip

HipCrime's ActiveAgent, the interNet's premier Publicity Engine,
is the integrated multi-protocol spamming solution, guaranteeing
anonymized saturation of both Usenet News (NNTP) and Email (SMTP).

Get your copy today, or get HipJoe'd ... it pays!

Dear Atari Community!

We are happy to announce the first beta release of EmuTOS.

INTRODUCTION

EmuTOS is a singleuser singletasking operating system for the 32 bit Atari
computer emulators. It is thought as a replacement for the TOS-images you
usually need today for using emulators and it is also running on some real
hardware, like the Atari Mega STE. All is open and maybe it is also running

on totally new machines in the future.

EmuTOS is beeing developed for more than a year now and is licensed under the OpenSource Gnu General Public Licence (GPL).

DESCRIPTION

EmuTOS is basically made up of four parts:

- The BIOS, which is the basic input output system - The XBIOS, which provides the interface to the hardware - The BDOS, which are the high level OS routines, what you know as GEMDOS - The shell command.prg we use, as long we have no GEM

The BIOS and XBIOS code is our own developement. It is really written from scratch and implements nearly all of the TOS 1.0 BIOS functionality, and a bit more, like e.g. harddisk access and STE sampled sound. A few things like printing, midi and serial stuff is missing for now, but may be implemented somewhere in the future.

The GEMDOS part is based on Digital Research's GEMDOS sources, which were made available under GPL licence in 1999 by Caldera. None of the graphical parts like VDI and AES are implemented. Instead we plan to use fVDI and an extra AES, like XaAES (just on MiNT) which together with a desktop make the GEM you all know and love.

Since EmuTOS just implements the TOS's functionality, you might want to use MiNT on it in order to run more modern software. EmuTOS is not an alternative to MiNT. But EmuTOS is the only free base OS to boot MiNT.

EMULATION AND FUTURE PLATFORM

EmuTOS and MiNT cooperate well. For the future we plan, that both can make use of a yet to implement standard native call interface for emulators. When running EmuTOS in an emulator, this interface will provide access to use the power of the underlying OS kernel. It may allow using modern 3D graphics cards, will provide fast native filesystem access and will enable you to use networking with all bells and wistles - and many things more you always dreamed of.

This is, what EmuTOS is made for: A free OS, that can evolve. Progress has been fast up to now, because we have a small, but enthusiastic development team and are eager to see EmuTOS running with GEM and all.

HARDWARE

Making EmuTOS running natively on a new hardware platform is more or less

just a question of driver support for EmuTOS. The same for MiNT, if you'd like to have it running over EmuTOS.

This is the currently supported Hardware:

- CPU support for m68000, m68010, m68020, m68030, m68040 - FPU detected - Memory controller (both ST and Falcon) - Monitor type detection (mono or not) - WD 1772 Floppy disk controller (write track not tested) - DMA controller - MFP - PSG - ST shifter - STE shifter (partitially) - ACIAs, IKBD protocol (mouse not tested) - MegaST Real-Time Clock (set clock not tested) - NVRAM (including RTC) - DMA sound

AVAILABILITY

EmuTOS has its home at sourceforge:

http://sourceforge.net/projects/emutos

A ready made EmuTOS image or the source can be downloaded from:

http://sourceforge.net/project/showfiles.php?group_id=36560

It is always available in source form from our CVS server at:

http://sourceforge.net/cvs/?group_id=36560

If you are just curious or would like to help us develop this nice little OS, you are invited to subscribe to our Mailinglist for developers at:

http://sourceforge.net/mail/?group_id=36560

Hope, you like EmuTOS. If you have any suggestions or comments, we always like to hear the good and also the bad things about it.

Your EmuTOS development team.

Mark Duckworth recently announced the launch of Atari-Source.com,
with this announcement:

Atari-source.com is in full swing. There's new articles and updates daily, news, reviews, help-guides and debates. I work to make sure I release at least something new per day, making this a great place to go for daily news updates about things that are really relevant in the Atari user community. We are geared towards open source, and atari as a useful machine today which includes source code revisions, operating system updates and system hardware upgrades. We syndicate news from atari-users.net and I pull a lot of my news from great places like atari.org and the German site st-computer.net. This site is strictly American/English which is a refreshing change in the many language Atari community.

As the site is a lot of work I am looking for someone to help me administrate and add news and articles. Anyone up for the challenge?

I offer free advertising to any atari related COMMERCIAL or non-commercial product project or website. I don't think atari developers or users need to be held back with silly advertising fees.

That is pretty much all, so come check us out if you haven't already,
http://atari-source.com
If you have already, Thank you

Version 0.02 of the html Rendering Engine HighWire is
now available for download.

There have been great improvements in both speed and
stability recently. Several little annoying GEM interface
problems have been eliminated. Table support has been expanded,
however it is not yet finished. We also have a French version
of the documentation available with the help of ProToS from
the Arcadia Crew. Hopefully this release will silence some
of the detractors who have been saying our task is impossible.
Our goal is achievable, it will just take time and your support.
We can always use more programmers and support on the
documentation side of the project always is a critical
need. Translation support for more languages would be a
great addition to the project as well.

The sources for the irc-client FracIRC and the telnet-client TelVT102
as well as the STiK application Doodle were today uploaded to The
Orphaned Projects Page. First two applications are written in C while
Doodle was coded in GFA, and they have all been discontinued since
quite a while.

With the sources available it will now be possible to revive them,
provided that one of you programmers is up for the challenge :)

This month, MyAtari has managed yet another exclusive! At
the end of last year, news circulated around the forums that
Jaguar and Lynx consoles were back on sale in the high street.

Following talks with EB Stores Group Ltd (the parent company
of the retail stores GAME and Electronics Boutique), MyAtari
recently managed to secure an interview with Ben Grant, the
UK Product Manager.

To read this interview and more, check out our latest issue at
http://www.myatari.net

The largest collection of Atari ST/Falcon/Jaguar music have just had
another giant update. 650 megabytes of music from Atari musicans,
originating from games, demos and even unreleased tracks.

The fourth CD features the following artists:

BabyDee / Effect
Baggio / Wildfire
Drax & Bern / Bodenstaendig 2000
D-Force / Fun
Gmx / Satantronic
Ice / Depression
Iso / Sentry^Axis
Dave, Ryan, Simon & Derek / Trideja
Mr. Future / Paranoia
Scavenger / Synergy
Sparehead 3 / Reservoir Gods
Tarzan Boy / Stax
Toodeloo / Dead Hackers Society
Tyan / Stax
Xtream / TooNS

To browse thru the new FT4 (or the previous three CD's) you can visit
Atari.Org's mirror on the URL below. There you'll also find links where
to download ISO9660 images and where to find information about ordering
the CD's.

Steem v2.1 has been released, lots of new features, lots of bug fixes:

-- Bug Fixes --
. v2.06 GraftGold fetch bug (Paradroid 90, Rainbow Islands).
. Lots of timings (Bird Mad Girl Show, many fullscreens).
. Bit shift bugs (a few protection routines).
. More cartridge bugs.
. More file association bugs.
. Steem no longer needs DirectX to be installed to be able to run.
. Lots of disk manager properties bugs.

-- New Features --
. Brightness/contrast.
. Automatic mixed resolution display in any drawing mode.
. Slow motion speed.
. PC display refresh synchronisation.
. Loads of MIDI options.
. Special effects for fullscreen.
. Joystick setups.
. Up to 8 PC joysticks can now be used (DirectInput only)

The Reservoir Gods have completed their conversion of "Chu Chu Rocket"
to the TT and STF/STM/STFM.

"Chu Chu Rocket" is a conversion of the popular DreamCast arcade puzzle
game. It includes multiplayer battle games, single player puzzle

sections and a two player co-operative mode.

The new STFM version lacks the stereo sampled sound effects of the
STE/TT & Falcon versions, and has a less defined palette, but all other
features are intact.

Keep your eyes peeled for "GodPey", the new game from Reservoir Gods,
coming soon!

I am pleased to inform you that MyAtari magazine has just added a
further two new articles to its February 2002 issue! The first, Full
Steem Ahead, by Tim Conrardy and the second, The MultiJoy8 Interface, by
Harry Reminder.

The other exciting news is, next month, MyAtari will be holding our
first annual awards. However, before voting begins in March, we want you
to send us your nominations for the following categories;

Best Atari web site of the year
Best Programmer of the year
Best Commercial release of the year
Best Shareware release of the year
Best PD/Freeware release of the year
Best Game release of the year
Best Hardware upgrade of the year

Best Atari supporting company of the year
Best Atari magazine of the year
Outstanding contribution to the Atari community

To read these new articles and submit your nominations for our 2002
Awards, please visit our web site at http://www.myatari.net

Best Regards,

Matthew Bacon, Editor

The new version 0.20 of the Atari ST emulator Hatari has been released.

It now features the long awaited graphical user interface for
configuring its options, selecting disc images etc.

Hatari now supports real hard disc images (ACSI emulation), too.

And finally you can now also use real PC joysticks to play your old ST
games with Hatari.

See http://hatari.sourceforge.net for more information and browse to
http://sourceforge.net/projects/hatari/ to download it!

A new online publication, the Classic Tech Eletter, recently launched.

The biweekly e-mail newsletter delivers info about:

- Milestone technology and the people who created them
- Collecting and preserving vintage computers of all types
- Fellow enthusiasts and their efforts to preserve computing history
- New technology and products destined for milestone status
- Rescues of rare or historically important computers
- Auction sales of interesting computer items

I've just updated the Atari Program Exchange (APX) section of
atariarchives.org. The following APX programs are now available
for download, with the permission of the authors:

Starware
Mapware
Astrology
Mankala
Speed-O-Disk
BASIC/XA
Smasher
T: A Text Display Device
Yahtman
Ultimate Renumber Utility
Bellum
Home Inventory
Keypad Controller
DiskMenu
DrawIt
Catterpiggle
Bootleg
Moon Marauder
Ringmaster
Supersort

Check it out at http://www.atariarchives.org/APX/

At last, after 2.5 years of development, ACE MIDI is here. For the first time the ATARI community can use the Falcon030 as a full blown MIDI synthesiser. ACE MIDI fits perfectly into any studio as it has a wide range of possibilities. Use the wave oscillators to create warm, cold, smooth, funny, weird, strange sounds, or load some samples to create that perfect beat. Everything is easily controlled by a number of devices. Use the LFO for vibrato, tremolo and wah-wah effects, the STEP MODULATOR on vocals to achieve "Cher singing" effects. All this in 16 bit resolution. Tap your sounds individualy through 4 outputs to your favourite effect box and add reverb, distortion or what ever you feel like, or use the internal effects to give your sounds that extra touch. The sounds in ACE MIDI ranges from retro chip-blip-blop sounds to multi-sampled pianos, strings or what ever you want to do. All this nicely packaged in a easy to use interface.

Read more about ACE MIDI and download the demo version now!

Steem v2.2 has arrived, the day after releasing v2.1 we managed to fix a big bug so that is why this version has come so soon, here is what has changed:

-- Bug Fixes --
. VBL timing inaccuracies (Lethal Xcess, No Cooper demo).
. STE sound short buffer support (Another World).
. Overscan timer B bug (Mindbomb).
. v2.1 24-bit straight blit/screen flip lowres double size window/fullscreen yellowing fixed.
. v2.1 FDC seek failed flag bug fixed.
. Hard drive Pexec close file bug (XSteem segfaults).
. Many other hard drive emulation bugs.
. Proper floppy disk light emulation.
. XSteem - options and general info should now work on all window managers.

-- New Features --
. Configurable run speed %.
. Better support for non-English keyboards, alternate switching and Type ST Character shortcut.
. 256 colour brightness/contrast display
. XSteem - statically linked binary, should work on any 486-compatible Linux system.
. Debug build - shortcuts for trace, run to rte and logging suspension.

Download the new version from http://www.blimey.strayduck.com/

Matthew Bacon, Editor of MyAtari, submitted:

I am pleased to announce that we have recently launched the March 2002
issue of MyAtari magazine. It is currently available on-line at
www.myatari.net

The issue includes a world exclusive tutorial of ACE (by New Beat
Productions), How to create Calamus fonts from Postcript Type 1 fonts,
Christoph Brinken asks "Have Atari users got a future?" and Tim Conrardy
takes a detailed look at AEX (by Dr Ambient).

The other big news this month is that MyAtari are holding its 2002
Awards! We need you to cast you vote in the following categories:

- Best Atari web site of the year
- Best Programmer of the year
- Best Commercial release of the year
- Best Shareware release of the year
- Best PD/Freeware release of the year

AEX is a MIDI program for the Atari, which simulates the classic
sequencers of the early 80's, used by artists such as Tangerine Dream
and Jean Michel Jarre. A new version is available for the Atari Falcon,
which offers a 256-color interface.

The developers of AtarICQ have announced:

Finally we have reached the state were we feel that the program is once
again ready for a new release!

Basically, the OVL has undergone some big changes in order to work with
the latest version of the ICQ protocol, v8. As most of you probably
already know by now, Mirabilis stopped supporting v5 of the protocol in
favour for the new one, which in fact is a subprotocol of OSCAR, the
protocol used by AOL Instant Messenger. In other words, the OVL has had
a massive make over in order to get aICQ working again, and Dan Ackerman
has made a wonderful job in implementing all the necessary changes.

In GUI, the list of changes is also quite long, and although most things might not seem like drastical stuff, some things are worth mentioning:

* Word wraps are recalculated if msg window is resized
* Copy function added for incoming area of msg window
* Popups are created faster (significant difference with large popups!)
* Popup icons are now also involved in 3d motion when selecting entry
* Clicking right mouse button will reverse direction of scrolling
* Double click on string in msg window text area calls for StringServer
* Right click on URLs in msg window presents alternatives via popup
* Preventing mouse shape from changing when live dragging window in XaAES
* VDI-blits used for scrolling in both message window and contact list (much faster)
* Speeded up loading/saving of user info (to HD) quite a bit
* Config loads much faster, especially if you got lots of contacts
* New shortcut: CTRL+Enter will send a msg and then close msg window

For more details, check out aicq site, and update.txt found in distribution zipfile.

While most things that the old client could do is already supported now, there are a few things that might not.

1) You can't yet create new ICQ accounts
2) Changing what list a contact is on (visible/invisible) might take a reconnect to get into effect
3) You *definitely* need to adjust the server (to login.icq.com) and port (to 5190), else aICQ will lock up tight.

Me and Dan hope that the new release will work out alright for all of you, but should any questions or problems occur, please do let us know, either through this email list, or on the aICQ forum (linked to from aICQ homepage)

Have fun, and cu all on ICQ ;)

From March 8 to 10 the first xTOS developmer meeting took place in
Dresden, Germany, where hard and software developers of the Atari market
participated.

During the three days, agreement over the exact hardware specifications
could be settled, and should be up on the xTOS website soon.

At the meeting, Milan Computer declared that they will provide the overworked TOS-version, so that actual versions can be used.

This means that the AtlanTOS (provisional project name) contains a TOS Kernel, on which MiNT is loaded. Which AES is finally used, is not completely clear yet. A possibility is to use a developed version of the AES 4.x in the Milan TOS.

The compatibility with old ST programs and games is to be ensured with a integrated ST emulator. Clean GEM/TOS programs will of course run directly.

Fred Horvat has announced:

The Classic Computer And Gaming(CCAG) Show 2002 is on!

"We, the CCAG organizers, regret that it took so long to officially announce the CCAG 2002 Show. However, we are also very glad that the CCAG 2001 Show did NOT take place after September 11th, 2001. Had CCAG 2001 taken place after 9-11, we would have had to cancel. Because we had used a National Guard Armory for the previous two CCAG's, we were not able to rent the Armory again after the events of 9-11. We have

been able to locate and secure a facility for CCAG 2002! We
again apologize for the delay, as we were only able to know
with certainty, in the past several days. See you all at the
CCAG 2002!!!"

CCAG 2002 Staff

The Classic Computer And Gaming Show 2002 will be held
on May 25th, 2002 from 8AM till 2 PM. Vendor setup is on
the 24th from 5:30PM till 9PM, and from 6:30AM till 8AM on the
25th. Show location is at the St. John Lutheran Church,
11333 Granger Road, Garfield Hts. Ohio, 44125.

Here is our own site for more information and current status
of vendors and attendees.

www.ccagshow.com

Table rental is $5 this year, and admission is only $2.
The admission fee will also allow you to be eligible for a
drawing at 1PM, the 25th, for an Arcade machine! (You will
need a way to take the machine home with you!)

The web site, www.ccagshow.com, has site info, table layouts,
map info, etc.

We hope to see you there at the CCAG 2002!

The sequencer software AEX is reelased in a version which is compatible
to the Atari emulator Steem. The program copies the classic Sequencers
of the 80's 70's. The versions for ST and TT has also been upgraded.

POKMUSIC is a new program for developers who develop for the classic
Atari VCS 5200.

It contains:

* MIDI2POK converts MIDI files into the 5200-Format
* POKEDIT is a surface for the development of 5200 peices.
* BIN2NC converts binary files into assembler format

Is in addition it contains a 5200 PKO Player.

The Classic Gaming Expo is one of the worlds largest fairs for classical
game systems. This year will take palce during 10 and 11 of August in
Las Vegas, USA.

Among other things the 30-year anniversary of Atari and the 25-year
anniversary of the VCS 2600 is celebrated. There is further information
on the web page.

Ssh (Secure Shell) is a program for logging into a remote machine and
for executing commands in a remote machine. It is intended to
replacerlogin and rsh, and provide secure encrypted communications
between two untrusted hosts over an insecure network. X11 connections
and arbitrary TCP/IP ports can also be forwarded over the secure channel.

The Atari FreeMiNT porting is made by Thomas Binder.

Since a few things have been fixed/changed/added since last release,
there is a new update available. This time it is however a binary-only
release and you will thus need RSC and OVL from 0.153 package.

Summary of changes:

* The routine for creating the config (add new user) is working again
NOTE: It is still not possible to create a new UIN.

* Pressing CTRL+C when outgoing field was empty crashed aICQ (fixed)

* Removed a faulty which appeared if aICQ was set to display msg dates

* Changes to contact list sliders (seen when having few contacts)

* If a contact that is not present on aICQs local list (might happen
if it was added to server list by ICQ on PC/Mac) is reported as being
online, aICQ will add it to the local list.

* A missing fclose to close scrap.txt when pasting is added

* When resizing msg window to be smaller, empty rows in begining of
the text buffer are removed.

* Program will report if writing logfile to disk was not carried out ok.

* Msg/URL icon will appear in contact list on incoming messages as
long as aICQ sees them as unread

It might also be worth mentioning that AtarICQ is nominated as best
shareware application by readers of MyAtari, so I wish to say thank
you to anyone who nominated us! Whatever you wish to put your vote on,

do make sure to vote before April 7th.

The new official website about the Coldfire-Atari-clone
project (formerly known as xTOS-computer) is available now.
It will provide the latest information about the project,
the involved people and the available documentation for
developers (not much yet, but that will change).

The Best of Creative Computing Volume 1 is now available on the Web in
its entirety. Published in 1976, this book is a true classic, containing
300+ pages of articles and programs from the first six issues of
Creative Computing magazine. (It is online with the permission of the
copyright holder.)

Lance at Video61 has announced:

 the first of the famous SCOTT ADAMS S.A.G.A. graphics adventures is now
available on cartridge for the atari 400/800/xl/xe/xegm computers.
 memory requirements are 48k. this is a awesome achievement by the
combined talents of three very gifted, and dedicated atari coders.
 special thanks to SCOTT ADAMS for permission to release his ground
breaking games on cartridge.
thanks,
lance

Compute!'s Second Book of Atari Graphics is now available on
the Web -- full text and all the software.

Kudos to Allan Bushman, who did the scanning and HTMLizing;
and Ron Hamilton for doing the code.

There is now a MiNTNet driver available for RTL8139 based ethernet cards
available on http://assemsoft.atari.org. Milan owners will benefit, while
Hades owners will need a 'private version' .. more info on my site.

The Atari Computer Database has been given a major upgrade! Although not
complete, the moment a regular visitor arrives or even a casual isitor,
one will notice a very large difference. The rest of the conversion from
the old format will go online bit by bit but as it is, any thing that is
still in old format will still stay online until its upgrade is complete.

as it takes me years to complete the Hang Loose Web page you can go
meanwhile to telnet://bbs.atari-warez.com to get yourself a account and
than either download your wanted files via telnet z-modem (yeahh good
old times) or after creating an account via ftp://ftp.atari-warez.com
with your newly created username and password.

Two new Falcon-demos were released at the Mekka/Symposium party in
Germany this weekend. One bigger demo from Ephidrena, previously only
active on the Amiga and another demo from the infamous Spiceboys.

Download them both at the URL below.

The editor of MyAtari has announced:

The April issue of MyAtari magazine is now available to read on-line

www.myatari.net

The March issue is also available to download from our back issues page.
Finally, please note that voting for the MyAtari 2002 Awards ends at
midnight on the 7th April 2002! If you are yet to cast your vote, please
do so ASAP

The HighWire Development Team has released the third demonstration
package. Progress has been made and there are many more exciting things
coming in the near future. Finding a point to release this time around
has been very hard. Almost daily, some new support has been added or
some old bug found and exterminated.

Improvements have been made throughout the code. Tables support is
looking brilliant, frameset support has been improved again. Some
irritating font issues have been fixed. Upper range character display
improvements. Atari character display in text files. More 'common' buggy
html code is supported. Yes many 'popular' sites have html that doesn't
comply with the specs ;) And that is only a portion of the improvements.

As always, we hope that this release will silence some of the detractors
who have been saying our task is impossible. Our goal is achievable, it

will just take time and your support. We can always use more programmers and support on the documentation side of the project always is a critical need. Translation support for more languages would be a great addition to the project as well.

We do feel that we have something here that shows that our platforms need for an open source browser can be obtained. Currently it should not really be classified as a browser, but more of a demonstration of a parsing and rendering engine. This technology is open source, so hopefully with your support it can be the core to many projects on our platform. Not the least of which will be in the future a fully modern web browser. To reach that goal we will need time and the help of community.

As users wished, MusicEdit now has a fully graphical input.

Right mouse-button is supported too, for opening graphical elements.

Lance at Video61 has announced:

 we are very pleased to be able to announce archer macleans famous world
karate championship now on cartridge for the atari 400/800/xl/xe/xegm.
 this world famous ground breaking game first saw the light in a 1986
release from EPYX.
 the memory requirements are 48k. the actual cartridge coding was done
by the combined efforts of 3 very dedicated atari coders, my thanks to
them.
 also special thanks to archer maclean for the permission to port his
ground breaking game to cartridge, and making it available to the atari
community again,
thanks,
lance

Mark Duckworth has announced:

I have acquired the source code to Koos Kuil's excellent Octopus BBS. Included already are special features for MiNT. I am adding features for MagiC and most importantly adding internet server support. What this means is that rather than suffering long distance fees and a wasted phone line, atarians will be able to "dial" atari BBS's running Octopus through a simple telnet client. Currently my progress has gotten to the point where I have patched octopus code to allow for some miscellaneous changes, I added support for the new configuration options in the main octopus config file and it can now detect a connection attempt and send out characters using STiK. Support will be implemented for MiNTnet as well as NOS networking so that people may run this on their MiNT webservers in addition to other stuff.

For those who don't know, Octopus BBS is a fantastic bbs package by Koos Kuil released as Shareware. I cannot release the source code (maybe just not yet) or binaries of my changes yet, but I am in negotiations. Hopefully Octopus will become open source (GNU GPL), though I don't know as Koos seems to think 2 years of his life coding is important to him ;-) I can understand that.

Any way around it, Octopus BBS is sure to have maintenance and a new maintainer and should become the current BBS package of choice for Atarians! ;-)

MagnusSoft(r)'s Atari 8-bit collection is now indexed by XL Search,
the Atari 8-bit file search engine.

MagnusSoft's files appear to be self-extracting ZIP programs for DOS,
containing an Atari emulator "ATR" disk image and some Windows BitMaPs of
printed documentation.

The Up-to-Date list now has its own domain. UTD list is a versiontracker
for Atari ST: it lists Atari software, and their version numbers, and
further information.

The old address at atari-web.de is no longer valid.

Hi,
a new version of LDG (version 2.00) is avalaible at

      http://ldg.atari.org/

LDG is a TOS based system allowing GEM applications to
load and share dynamical libraries. This last version is
really faster than previous one (version 1.20).

The package provides a GEM installer and a developper kit
for Gcc, Pure C and Sozobon C. However, it is very simple
to use LDG for other language (that explained in the
ST-guide documentation of LDG).

Have fun

Raphael Espino has created a JPG viewer for the Atari 8-bits.

He writes:
I've uploaded the lastest version of the jpeg viewer to my webpage now:

http://www.geocities.com/rjespino/atari.html

This version is faster, adds new display modes, and fixes a few bugs. It

is a big improvement over the previous version. The source code for both
the decoder and the viewer are also available, this makes it possible for
others to write their own viewers.

Tetrax 1.00 has been released. Tetrax is a MOD player that uses the
XBIOS for sound replay. So Tetrax also works on Milan, Hades, MagicPC
and with MagicMac! You just need the right sound hardware (like
Milanblaster) and a XBIOS compatible driver.

A new version of the STE emulator Steem has been released. Here is a
list of fixes and new features:

MIDI in and out (experimental).
Printer out (requires an ST compatible printer).

Custom disk images, up to 2.3Mb!
Easy import of WinSTon favourites.
Rapid creation of multiple shortcuts.
Overscans improved - will always happen if needed.
DMA sound made safe for all sound cards.
ENTER and keypad / are now different from RETURN and /? (Damocles).
Fixed a few IKBD bugs (Chubby Gristle, The Pink Panther).
Fixed a minor Timer B bug (Hot Rubber, Batman titles).
Turn hard drives off without losing the path.
Auto update - Can download a new version when available if you want it
to.
Speeded up the Disk Manager generally and added an option to speed up
displaying folders with many ZIPs.

The graphic image manager VISION is now available in version 4.0 and has
some new features like an image browser, and now you can develop you own
modules.

Now you can register NED PLAYER simple by sending card of your town or
country to author. There have to be your email (for sending registering
code), your name and type of computer you are using. This opportunity is
time limited until the end of year 2000 (decisive is date of sending).
The normal shareware fee for NED PLAYER is 15 USD or equivalent.

Lines: 27
Xref: supernews.google.com comp.sys.atari.announce:48

The third public release of the reverse-engineered Atari 8-bit ROM
source code in CC65 format is now available for download from my Atari
page:

  http://ch.twi.tudelft.nl/~sidney/atari/

From the README:

"This third version focusses on supporting more types of ROMs. A grand
total of 11 different images can be produced now (compared to two in the
second release) spanning a wide range of Atari machines and ROM
versions. Now it is possible to produce all three known BASIC versions,
an OS-B/NTSC 400/800 ROM image, a 1200 XL OS-ROM image, and four
versions of regular XL/XE ROMS. As an encore, two peculiar ROMs are
included: the Arabic-language XL/XE ROM which comes from a very rare

type of Atari that was targetted at Arabic-speaking countries, featuring
an Arabic character set, and the 5200 XEGS ROM."

Any comments are welcomed.

Xref: supernews.google.com comp.sys.atari.announce:50

I'm proud to announce version 2.6 of CC65, a C crosscompiler /
crossassembler combo for 6502 systems.

CC65 has C and runtime library support for many of the old 6502 machines,
including

  - The Commodore C64, C128 and the C16, C116, Plus/4 machines.
  - The CBM 600/700 family (programs run in bank 1).
  - Newer PET machines (not 2001)
  - The Apple][(library support by Kevin Ruland
<kevin@rodin.wustl.edu>)
  - The Atari 8 bit machines (thanks to the Atari team)
  - GEOS for the C64 and C128 (GEOSLib by Maciej Witkowiak
<ytm@elysium.pl>)

The libraries are fairly portable, so creating a version for other 6502s
shouldn't be too much work.

New in this version:

  * All bugs mentioned on the bugs web page for version 2.5 are fixed.

  * Several new commands/features for the assembler, including a repeat
    statement and target specific character sets.

  * More 65C02 support.

  * Module constructors/destructors (assembler/linker).

  * `const' is honored in most places now, `const' data goes into the
    RODATA segment by default.

  * Lots of larger library routines rewritten in assembler for speed and
    size (heap management, printf family).

  * New object dump utility.

  * New disassembler and assembler --> HTML converter (beta!).

  * New low level disk I/O module for the Atari, thanks to Christian
    Groessler, <cpg@aladdin.de>.

  * New mouse routines for the Atari machines by Christian Groessler and
    Freddy Offenga, <F.Offenga@student.kun.nl>. The mouse routines for
   the C64 are now debugged and should work (but still beta).

  * Other stuff.

There is still no support for the following features:

  * Floats and bit fields.

  * File routines on most systems. The 8 bit Ataris are the first
    machines that do have full file I/O support (besides the ACE port
    which was dropped some time ago). Please note that the complete CBM
    family doesn't have file I/O support!

  * The 80 column mode on the C128 is not supported by the conio library.

Available packages:

As usual I will provide the complete sources and several binary packages,
including RPMs for RedHat Linux. Linux is the primary development
platform, so the sources do compile out of the box on Linux machines.

Please note that there are now separate RPMs for the compiler proper and
the target specific libraries. To develop for one of the predefined
target systems you need the compiler RPM package *and* one of the target
machine packages.

Binaries for DOS and and Windows will follow or may already be available
at the time you read this. OS/2 packages will again be available, but
since there are almost no downloads for OS/2, so the host platform may
get dropped in the near future (again).

Download:

More information information and a download link, please visit the cc65
web page at

   http://www.cc65.org/

Thanks to all who sent feedback and suggestions and of course to anyone
who helped developing cc65!

Hi all!

Spotted this bit of news on the german Atari news sites. Might be of interest!

Olaf Meisiek, the author of the resource editor Interface, has released it for free download exclusively from the homepage of Gerd Heller. It is NOT freeware and so may not be distributed, so you have to download directly from Gerd's website.

The url is http://www.hadley.de but apparently the site is not 100% compatible with atari browsers (Javascript and such I guess...) so they also kindly supply the link directly to the Interface Archive:

http://www.hadley.dusnet.de/atari/dateien/intrface.zip

(The GFA-Interpreter 3.5 is also available for download)

Have fun,

Jerry Martin

"For X-mas we decided to release an unrestricted version of Towers II -
Plight of the Stargazer for the Atari Falcon. Towers II was
originally released in 1995 for the Atari Falcon, using Hi-Color
graphics, smooth-scrolling 3D, and the DSP for a 16bit stereo
MOD player. Since that time, Towers II has made its way to the
Atari Jaguar in 1996, Windows 95 in 1997, and will debut on the
Game Boy Color (as a Step 3D graphic game) in 2001."

You can download the game from:
http://ftp.jvgames.com/towersii.zip

The Atari SAP Music Archive (ASMA) is the greatest
collection of Atari Pokey Music in the net, it is
always updated, constantly being corrected and
worked over and has now reached version 1.8.

The original archive requires a filesystem that
can handle long filenames, however, Paranoia
offers the 1.6 archive plus 2 update packages to
1.7 and 1.8 renamed to 8+3 filenames.

The original ASMA can be obtained at http://asma.dspaudio.com
The 8+3 ASMA can be obtained at http://paranoia.atari.org

The latest version of a8jdpeg, the jpeg viewer for the Atari 8-bit is
now available for download. a8jdpeg is an Atari 8-bit port of the
C=64's juddpeg, written by Stephen L. Judd.

It is available for download at either of these addresses:

http://rjespino.atari.org
http://rjespino.webhop.org

The main changes are:
o Added HIP viewing mode
o Added HIP save mode
o Reduced flickering in flicker modes
o Files can be selected from the directory list
o Wildcards can now be used when loading files

Another release of AtarICQ is now available, with a few new features to explore:

-Use more lines for writing your messages
-UNDO will re-enter last sent message (even URLs)
-New LED-panel added, so you can see when aICQ is waiting for ack/data
-New sound event, sound_msg_sent

These are the most significant changes. Read the docs to learn about all the
details.

A new version of free AES - VDI binding library is avaible.
MGEMLIB pl 39 is base on GEMLIB pl 38

What new?
Fix a lot of bugs
Add new calls of Magic
Support of multithreading for AES
Speed optimisation
No diffrence for beetween INT in 16 bit and 32!

This lib can be use now for GCC (16 -32), PureC, SozobonX and
should be work with other C compilers.
Source and binary are avaible

Noah Silva writes:

Hello, I just made a [somewhat] working port of
Borland's MicroCalc Spreadsheet software to Atari TOS.
It is very basic, but does what I use spreadsheets for most
of the time. It currently will run well in a MagiC vt52
window or in SingleTOS (it is a TOS program, not a GEM program).
I will be working on updating it to be more user friendly. Please
leave me any comments, bug reports, suggestions/feature wishes, or
problems at: nsilva@atari-source.com.

Thomas GOIRAND, autor of Fashion (the RSC editor that was planed to be
shipped in Centek's developper's kit), has released all the source
of his program. This includes a librairy for programming GEM using
assembly language, a small desktop (what would have been called Rune:
the Dolmen's desktop), a image viewer, etc.

Two dozen classic articles about using AtariWriter and Atari
word-processing in general are now available on the Web.

Carolyn's Corner was a column about word-processing in general and
AtariWriter Plus in particular, written by Carolyn Hoglin. It could have
been subtitled "Secrets You Won't Learn from the Manual." It was featured
in the Mid-Florida Atari Computer Club's newsletter from 1990-1992 and
posted to CompuServe's Atari Forum during the same period.

A new internet site, labelled Tron.Com has been launched.

If you remember the old days of the Atari ST demo scene, you would have
probably come across the demo groups Effect, Sublime and Kuba.

We produced disks that featured the latest releases from the Atari scene
for that era. Started in 1993 and finishing in 1996, you can track the
Atari demo scene with the aid of the Effect Industrially Safe Demo Disks.

Other compilation series included, Agricultural Games Disks, Mega Illusive
GIF Disks and Ninistral Module Disks.

90% of Effect, Kuba and Sublime releases are featured on this web site,
complete with a screen shot and the contents of each compilation.

The first version of the mini HTML generator Atari HTMLGen was released.
It's a port from the original Perl-based HTML Generator HTMLGen.PL.

The object of Atari HTMLGen is to make web pages fast with a well defined
structure (header, body and footer). You can use the main HTML tags
(title, subtitle, images) with the main menu or you can write your own
HTML code with the built in text editor. It works on any Atari ST system.

http://hfa.linuxpersonal.com/htmlgen

Hello!

After a week of hacking headers and making localized tests, I
have finally managed to compile the DHCP client/server/relay
suite for MiNT-Net.

This was a gruesome effort that required several clarifications
from the package's original author before it successfully made it
into binary form but, basicaly, it is now available.

Anyone interrested in beta-testing my port before the "official"
release should contact me directly via e-mail.

Following those tests, assuming positive results, the archive
will be packaged into a SpareMiNT RPM and other more polished
formats better stuited for widespread distribution.

Regards,

Jeff Mitchell (ncc0106@nbc.netcom.ca) has announced:

I've got the worlds first and only Atari ST telnet based BBS. Its a rebirth of my bbs last seen about 8 years ago. Mainly its to be a chat forum for like minded fellows, Atarians, and a gaming platform to relive the old BBS classics.

Please come check it out!

http://www.skeleton.org/bbsindex.html

or just telnet right to "shadow.skeleton.org", logging in as "bbs"

jeff

NoSTalgia 1.0 is now available

http://users.skynet.be/sky39147/

NoSTalgia is an Atari ST emulator for the Macintosh.

What's new in version 1.0 ?

- This version runs on OS X (Carbon) or System 8.x/9.x.
- Added overscan low.
- Added "freeze" , "unfreeze" functions.
- Fixed MFP/new code (Captain blood rasters, Interphase,...).
- Fixed MFP vector (fix lot of programs).
- Removed OMS support.
- Fixed bug in CPU, instructions timing.
- New Audio support (no samples yet).
- Fixed shifter timing.
- Better control of the emulation speed.
- Added an 'Auto frame' option to help the emulator when the CPU is too
slow.
- Fixed several bugs in the FDC emulator (Drakken,...)
- Fixed the keyboard synchro code.
- Fixed the real time clock (Captain Blood).
- Most of the code has been rewritten.

Notes:

- Direct screen drawing is still present (and much faster) but is NOT

recommended under OS X.
- You cant 'hog' all the CPU under OSX.
- Quickdraw performances are not great with OS X, NoSTalgia runs faster
under 0S 9 in Quickdraw mode.
- NoSTalgia is too slow in 'Millions Colors', switch to 'thousands
Colors'.
- The emulator may be slower when 'max speed' is enabled because it
doesnt skip any frame in this mode.
- There is no 'Full screen mode' with OS X.
- You cant hide the Mac mouse with OS X.

The latest version of a8jdpeg, the JPEG viewer for Atari 8-bit
computers is now available for download. There are 2 versions of
the viewer available:

* JpegView - the user friendly version

* a8jdpeg 0.6 - has an additional little used save option

The following changes have been made to a8jdpeg 0.6:

 - Fixed save to HIP mode bug
 - Added MyDOS subdirectory support to directory list
 - Pressing the Tab key on the file name prompt fills in the last file
   name used

Both are available from:
http://members.nbci.com/rjespino/8bit/a8jdpeg/a8jdpeg.html

http://www.angelfire.com/80s/rjespino/8bit/a8jdpeg/a8jdpeg.html

A new Linker for the GFA Development-Kit 3.6TT is available. The new

(R)GFA-Linker has no problems with long filenames, MagicPC, real
library-filenames (with extension) and is optimized for the LicomLIB.

The website about SainT & ST demos has been updated:
- The design has been modified.
- New sections (FAQ about SainT, listing by name of authors) and more
demos have been added.
- Today, the site offers 170 Mb of ST demos. Hope it will reach 200 Mb
before the holidays.

After a long delay, a new STune version is available.
STune is a realtime strategy game that runs fine as a GEM application.
The newest version has a lot of bugs fixed, e.g. the network mode now
works better, and it should now even run a little bit faster!

Eric Reboux Software (http://ers.free.fr) are now in the
Shareware Europe catalog. The 1st program to join the list
is WinFrame, a new windframe for MagiC (6 and up).

This one is a rewritten one, allowing more customization
than just a redesign of the widgets.

Coming soon: Find It, Direct (a new desktop).

    After clearing up the license status of Digital Researchs GEMDOS,
I can now provide most parts of GEMDOS under GPL license. They have
been available for a longer time on the GEM World site, but the
copyright status had been unclear. This now changed (as you can read
on my site).
    You now can get a GEMDOS porting kit with all, but the machine
specific parts of GEMDOS in source form. Maybe, it is just for
historicle interest, maybe you can use it for something new. So, now
have a look at:

   http://www.mucl.de/~mdoering/atari/en/index.htm

At last many thanks to Lineo - they made this possible!

UPX 1.08 has been released - featuring a native port to atari/tos

UPX is a free, portable, extendable, high-performance executable packer
for several different executable formats. It achieves an excellent
compression ratio and offers very fast decompression. Your executables
suffer no memory overhead or other drawbacks.

The 1.08a version feature now a native port to atari/tos.

Anodyne Software is pleased to announce that CD Writer Suite v3.2 is now available. New features in this update are:

   . creation of audio CDs from MP3 files

   . backup of large partitions on multiple CDs

   . CDextra support

   . 6x writing speed on Centurbo

   . many other enhancements and bug fixes.

Registered users of CD Writer Suite can upgrade at no cost from Anodyne Software web site.

CD Writer Suite is a comprehensive Compact Disc recording package, which contains three programs:

CDwriter: creates audio CDs that can be played back on a standard audio CD player or on your CD-ROM drive.

CDbackup: backs up hard disk partitions to data CDs, which can be used to restore the entire partition or to recover individual files. Long filenames are supported.

CD InScriptOr: creates standard ISO9660 CDs that can be read on most systems, including TOS, MagiC, Windows and Linux. Long filenames are supported.

It supports many brands of CD-R and CD-RW recorders and works on all Atari systems. For more information, please contact Anodyne Software by email at anodyne@cyberus.ca, or visit our web site at http://www.cyberus.ca/~anodyne.

Xref: archiver1.google.com comp.sys.atari.announce:108

Finally a new version is patched together, which for a
change actually do have some new features to list.
These are the major changes:

* Fonts

AtarICQ now supports the drag&drop font selector protocol,
making it possible to either use the one built into Thing
or to load up a stand-alone selector.

The message window and contact list are the 2 windows in aICQ
that responds to fonts being dropped on them. The message window
will also be sensitive to the attribute (bold, italic, shadowed)
set by the font selector. Only monospaced fonts are allowed.

* Popup menus

The popup menus has been totally reworked, and are now created
on-the-fly. They are also put into GEM window will from now on
be comletely non-modal and will thus not block either the AES nor
the main loop of AtarICQ.

* Sending contacts

It is now possible to pass on a contact from your contact list to
any of your other friends on the list. Great way to extend the list ;)
Only limitation is that only 1 contact can be sent at a time.

* Object focus

AtarICQ uses a scheme allowing the user to "TAB" to toggle what object
is the currently focused one. An idea borrowed from M$ Windows. In this
release there have been a lot of improvements made to make those routines
work correctly no matter what AES is running beneath them.

+ a seriously huge number of anonymous fixes

"Texto!", a text converter tool, has been updated to version 2.0. You can
easily convert your text files:

- from Atari ASCII to HTML,
- from Atari ASCII to Windows ANSI,
- from Windows ANSI to Atari ASCII,
- you can also remove the occidental accents.

This new release brings some enhancements:
- works fine in multitasking,
- multiple file conversions, thanks to the support of enhanced file
selectors (Selectric, BoxKite...),
- should work under all Atari OSes and all screen resolutions,
- it can run as an accessory,
- new interface, easier to use,
- a big part of the source code has been rewritten and improved.

Texto! 2.0 is available on http://strider.atari.org

This is a French site, so here is the direct link:
http://www.multimania.com/toxicmag/prods/texto2.zip

From comp.sys.atari.8bit:

From: "Brian" <brian@spheroid.demon.co.uk>
Subject: UK8 Convention cancelled
Date: Sat, 17 Jul 1999 07:53:16 +0100
Reply-To: "Brian" <brian@spheroid.demon.co.uk>

Due to a sudden and substantial change of circumstances, the UK8 Convention (a cross-format event for 8-bit computer users) which was to be held in Walsall, West Midlands, England in September 1999, has had to be cancelled.

Regrettably, it is not possible to arrange for the event to be moved to an satisfactory alternative venue on or about the same date. However, it is expected that an alternative venue will be found in time for the event to be held early in 2000.

All monies which have been paid to date are being refunded. As you will appreciate, this will take some time, but it is expected that that side of things will be complete by the end of July at the latest.

Please spread the word to any 8-bit computer magazine or individual who may not have the facilities to receive this e-mail or read it in any of the newsgroups to which it is being posted.

I will not be able to keep track of any/all the discussion threads in those newsgroups, but would appreciate being copied (to uk8@spheroid.demon.co.uk, please) with postings on the matter.

Here are 7 new to cart format games for all XL/XE machines with at least
64k of ram, these all run from the cart port, simply plug in and play:

- zybex
- mah jong - from childs play software, the same company that did the
awesome solitaire
- monopoly - awesome graphics
- mr. robot&his robot factory
- dinky doo - 9 level platform game,
- concentration - by the same people who did solitaire
- tetris game - one or two player simultaneous version.

To order go to http://www.atarisales.com

thanks,
lance

The new version is a better one than V5.4 :-)

At last I put in the few special 040 & 060 instructions.

  new since 5.3:   (Forget V5.4 That one was a bit premature :-)
        Marking of jumptables for label generating.
            Find jmp's and jsr's with indirect operand.
        Give names to absolute word addresses.
        Options in the config file related to the above.
        Give names to standard labels.
        Attach a short comment to an address.
        More flexible index file.
        At last!   Full 68040 & 68060 support.

Visit my web site:

Ripped-Off Demo Cd's now has 30 out of its total collection of 13
Demo Compilations online & ready to download. (In zipped .ST format)
Regular updates mean that the entire collection should be online
within a short space of time.

The Anolog Computing classic "The Clash of the Kings" is now on cartridge.
It works on all 8-bit Atari computers with at least 16k of RAM.

For ordering info, go to:

NoCrew have released v0.995 of their DSP MP2-Decoder for
Falcons. New things are much improved external clock
detection and some new shoe-commands.

The alphabetical sorter A-Z (pronounced A-to-Z) has been updated
to v2.6. The only change is that the program can now also load
Mac/Unix files. The archive includes also an install program (GEMSetup).

We need writer's and Editors for for Atari TOS, systems and software. I
am asking you the users as you are the experts. If you are interested
in sharing your computer expertise and helping others learn more about
computers or software consider submitting your articles, tips,and
writings to the ACGP for publication in our monthly e-zine GrafixWorld.

Within its pages you will find it full of insightful reviews, User tips
and Legal Tips for the Creative Professional.

GrafixWorld is free to download and we are always willing to publish the
works and writing of those who wish to submit reviews, works of art or
just state an opinion.

GrafixWorld is published by the Association of Computer Graphics
Professionals. The ACGP is a worldwide organization of creative
professionals with a free membership.

Members enjoy a growing list of available discounts from many
manufactuers and publishers. We are here to help each other learn and
grow in our creative fields.

Join the Association of Computer Graphics Professionals today.
It is free.

Submissions, Questions and Comments can be e-mailed to:

I have updated my ICE (Internet Connectivity for Atari Eight-bits) page with
a new version of my program. The current version will download and display
the source for a web page (currently hardcoded to download my Atari page).
I would appreciate any feedback from anyone capable of testing the program
to see if it works at all for anyone else. You can download it from my
Project ICE page at http://home.columbus.rr.com/ksiders/ice.htm.

Thanks, Ken Siders atari@columbus.rr.com

The HTML editor Joe has been updated to version 1.46.
Joe now supports the DHST protocol. Some bugfixes have been made as well.

RSC_TRAN, the tool for easier RSC translations has been updated and
will now create a file containing the tree(s)/object(s) where some text
overflow might have occured. It stores the rest of the 'clipped' text
plus the whole text line. Now you know exactly where to search in the
RSC (since sometimes fields are hidden :-) Get it from my homepage.

A new version of CAB.OVL for CAB/StiK/STinG is available on my Homepage.

CAB.OVL V5.54 beta

Near Fixed: No more 0 bytes/sec during download.

New : The module check hotlist can be used for scanning changed
documents.

New : In config SETUP a turbo mode is added. Increase data flow for
medium documents.

Cheers,
Olivier.

I'm very glad to announce that I will release my software to control
light for theatre this week in it's prerelease version.

Exposure 1.00 pre 1

With this software you may control lighting for whole theatre shows,
even some smaller musicals and musicgigs.
Some parts is already released, and the others is to come this next
week.
Check out my website for information and download at:
http://light.atari.org

Finally I would like to thank everyone helping me in my work.

The Cleveland Freenet will be closing down for good September 30, 1999.

The above sentence was something I knew one day would happen but never wanted to really admit it. The world pioneer in Freenet's, free Internet access and more after 20 years will be closing due to becoming obsolete or so what Case Western Reserve University says. I don't remember the full history from the beginning so I will not try to tell it here. I became a member in May of 1985 and had a great ride with the Cleveland Freenet. I received free Internet E-mail and access to the Internet or what it was 14 years ago. It was fun reading through the Usenet and browsing the Web with Lynx or Gopher in ASCII. The system was extremely easy to use in it's time and to this day the ease of use still exceeds current offerings. On the Cleveland Freenet one still does not have to worry about E-mail Virus's because mail is ASCII only. It was often imitated but never exceeded. Apple even imitated the community look and feel many years ago when they offered their own online service.

But another sad note one of the worlds oldest and longest running Atari forums will also be closing down as part of the Freenet. The Atari SIG has been there from the very beginning as being one of the Freenet's first SIGs. Thousands of Atari fanatics have been through that SIG and it still is in use today and is still quite popular. It used to be one of the premiere Atari SIGs on the Net. They even for a couple of years published an online magazine called CAIN (Central Atari Information Network) that I was fortunate to be part of. CAIN even had Cleveland's largest ever Atari Show in 1994. For anyone interested in viewing the Atari SIG on the Cleveland Freenet on last time or for the first time Telnet to freenet-in-c.cwru.edu once connected as a member or guest from any menu type "go atari" and enjoy. There are 10 years of various Atari online magazines posted there and in some areas archived reviews, messages and more.

I could go on and on about my experiences with the Cleveland Freenet but I don't want to bore any of you. If you have any comments feel free to E-mail me or the Atari SIG. We'd love to hear from you.

Other places to go for Atari information, news, support and more.

I scanned the original Turbo-Basic XL articles from Happy Computer
magazine... All articles are German, of course. The scans are b/w in 300dpi,
so they should print out fine.

Check out this page:
http://www.informatik.uni-bremen.de/~mnemo/atari/

Smush, a game first published in Antic magazine, is now on cart:
it runs on all Atari 8-bit computers with at least 16k of RAM.

Midas Maze, from Analog Magazine, is also now available on cart. This
will run on all Atari 8-bits with at least 48k of RAM.

Both are available from Video 61: http://www.atarisales.com

Calagan's Gaming Hell just launched its Atari section including all
22 Yogi's Megagames with full listings and screenshots of the best games.
Cal is currently preparing its own home brew compilations organised
by genre (platform, strategy, sports...) and will upload then soon.

You can download the new versions of CENTscreen, CECILE 2.18, CBOOT, PUTFLASH
and FLASH.BIN for CT2 and the demoversion of SANDRINE.

We signal you that the versions 2.15 and 2.16 of CECILE contain a bug that
may affect the CD-Rom software. Please change your CECILE if you have one of these
numbers.

We recall you that it is important to update all this programs together
or you may have some bad problems!

We have yet 14 CT2 in stock. Join the club of the 241-14= 227 users...

The Phenix R1 (prototype) goes to the Rev. A (Developer version).
The principal modification concerns the add of the two PS/2 ports for
standart Keyboard and mouse, because it seems that the USB keyboard doesn't
seriously appear on the market.

It will be possible to connect all models of keyboard and mouse on the
Phenix 060 with most attractive prices.

A new features list is on the site. Same thing with a new functional diagram
that is now presented as normalized ('north' and 'south bridge' terms).

The Phenix 060 is now ready to be produce in a small quantity for the
developers.

Don't hesitate to contact us to encourage or for remarks.

Alta Lista, HTML and image catalogizer, has been updated to v2.6.
This release features new colour icons (up to 256 colours) which
replace the old monochrome ones. The dialogs got a new look and
some not yet available features have been disabled. Alta Lista
can also be used to see how a HTML page will appear in a web
search engine because the program behaves almost like the popular
Alta Vista search engine.

The main program is completely in English language, an extensive
ST-Guide hypertext is - along with many other features - planned
for v3.0 which will be released later this year.

This new version now has dynamic system routine chosen. So one
can add new system routines to control keyboard, mouse, joystick,
video and sound. I hope it will run on all Atari machines with
320x200x8 bits or higher display.

As usual, any help will be appreciated to improve the engine
(sources are available!)

What Is It?

  XL Search is a web- and e-mail-based search engine. With it, you can
  search numerous Atari FTP and websites for programs for, and documents
  related to, Atari 8-bit computers.

  (This includes the Atari 400, 800, 800XL, 600XL, 1200XL, 800XE, 65XE,
  130XE and XEGS, as well as the numerous Atari 8-bit computer emulators
  for DOS, Windows, Unix, Macintosh, Amiga and Atari ST/TT computers.)

Where Is It?

  XL Search can be accessed via the web at:

    http://xlsearch.atari.org/

  or:

    http://www.newbreedsoftware.com/xlsearch/

  An e-mail gateway is available as well! Simply send a blank message to:

    xlsearch@newbreedsoftware.com

  An automated reply will explain how to use XL Search via e-mail.

What Has Changed?

  Marek Zelem's "Fornax" FTP site, containing over 3000 Atari 8-bit
  files, has been added to our index.

XL Search has now exceeded the 20,000-file mark! Almost 10 different
Atari 8-bit file collections are indexed!

Hello folks,
GEMPeaks Version 1.03 is now from my Homepage downloadable.

Since i'm using now the CF-Lib, all Dialogues are now in Windows, also should it
now run on
Standard-Falcons. (more details on my homepage)
Sorry, the Documentation and the Program are not yet translated into english, but
my
Homepage is. You can read the introduction on it. (hope my english is
understandable)

I will also make use of GEM-Setup in the future, but it makes no sense, since the
Resources
and Hypertext are currently only in german language.

Thanks for voting my Program to the 4th Place in the MGC'99
I'm very proud of this, because GEMPeaks was my first C-Projekt.
Mit freundlichen Gr��en,
Christian Putzig

The Cleveland Free-Net is gone, but the entire Atari archive has been downloaded and re-indexed into a fast web based format. All the Atari SIG's were archived. These include:

The Atari 8-bit SIG
The Atari ST/TT SIG
The Atari Portfolio SIG
The Atari Lynx SIG
The Atari Jaguar SIG
The Atari Library

The the original menus have been saved, as well as all the original content, such as announcments, news, messages, etc. If you're looking for Atari technical information, chances are its all there just waiting to be searched.

The archive is at:

http://thefutureis.penguinpowered.com/

This is a non-profit venture, there are no banners or other annoying junk to wade through. I hope you enjoy having the archive available.

Steve

The VideoGame Network is a new online portal site for games.
VGN is looking for one or two volunteers to run the Atari portion
of its its web site. The site launches on September 6 and will
offer users gaming news, profiles on new and classic games, free
email and ISP services. If you want to get involved visit
http://www.videogame.net for more information.

The all in one Internet solution Draconis (pro) is now
available as patchlevel 2. Lots of bugs have been fixed especially
regarding JavaScript support (pro version). A pre release of
Adamas 1.6 Pl.3 has been released as well which includes some
fixes regarding frames.

Overedit is an editor for Pure C and offers a lot of
interesting features: syntax highlighting, popup with most
important functions, tool window, Pure C compiler, assembler
and debugger can be directly configured and started from
within the editor. Overedit is currently only available with
French docs but an English RSC is included in the package.

MesaGL, a free clone of OpenGL, is available for TOS systems.
It was compiled by Olivier Landemarre. MesaGL can be found at:

http://www-air.inria.fr/~bereziat/Binary/Mesadev.lzh

It is a programming kit for GnuC and PureC. Actually, the MesaGL lib is
a LDG (a Gem Dynamical Library) so it can be used by others languages
than PureC/GnuC. More information about LDG is available at:

http://www-air.inria.fr/~bereziat/

At E3, Hasbro announced that new Jaguar games can now be freely released and if you want to make profit out of this decision you probably want to make your own killer game for the Jag. But before you can do so you have to download the latest version of the Jaguar Development Kit 1.991 (TOS/MiNT/MagiC) by Laurent Favard.

The cool French fun racing game Radical Race for the Falcon by
Pentagon has been released as freeware. It is a huge download
but worth it.

It has been reported by Anthony Green in Australia that the patch program
RA_YIELD which I recently released has made it possible to run STinG well
under MultiTOS 1.08 on the Hades 060 as well as on any other TOS machine.

I am today uploading this patch program to my STinG pages (URL in my SIG),
so that all who wish to use STinG with MultiTOS can find it there. This is
primarily intended for Hades 060 users of course, as it is they that still
have no reliable normal TOS.

(Hades TOS 3.06 has serious compatibility problems, unlike TT TOS 3.06.)

Here are recent announments about plug-ins for Whip, a Virtual Light
Machine for the Falcon030. Whip is available from
http://escape.atari.org

Audio WhiPong -- 'A VLM as you've never seen before:
a Pong as you've never heard before!' This is the best description
NoBrain / NoCrew could give for his new Whip! module. So plug two
microphones (one for the left, one for the right channel) into your
Falcon and battle it out.
ftp://ftp.nocrew.org/pub/nocrew/tos/vlms/whipong.lzh

Whip Blur -- It is more or less a straight conversion of one of the
Dream Dimension screens, with some addition graphics on top.
http://wombat.ludvika.se/ae/dhs_files/misc/whipbl10.zip

Water Cascade -- <a water cascade thingie," best seen with slow music.
ftp://ftp.nocrew.org/pub/nocrew/tos/vlms/cascade.lzh

Sparkle -- NoBrain has coded a new plugin effect for the Whip VLM. This
time it's a sparkle effect.
http://wombat.ludvika.se/ae/dhs_files/misc/sparkle.zip

Newsgroups: comp.sys.atari.announce

We are pleased to announce that we have been able to reduce the cost of some of our Atari 8-bit products, as follows:

QUICK Complete Package - GBP10 (US$20)
Screen Aided Management (SAM) Complete Package - GBP10 (US$20)
QUICK ED Character Set Editor - GBP3.00 (US$6)
RubberBall game - GBP2 (US$4)
Bombi game - GBP2 (US$4)
Minesweeper game - GBP2 (US$4)
Glaggs It! game - GBP2 (US$4)
Pack of all 4 games above - GBP5 (US$10)

Most of these savings are around 30% off the original costs. These new prices are permanent, not just temporary special offers. Full details of all these products are available in our new on-line catalogue, which is now in two parts: Public Domain Catalogue, and Commercial Software Catalogue. Both are selected from the 'Catalogue' option from our website at: http://www.dgs.clara.net

The prices shown above include P&P for UK orders. US orders are subject to a small shipping charge of 10% of order value, minimum US$5. This is for Air Mail, which takes around 5 days.

Mountain version 0.90 is available on:
http://tntmag.atari.org/mounted.htm

Mountain is video editing software for all Atari >= 68030

With these new features :
+ It's now possible to set an intensity for all tracks
+ New rounded buttons
+ New effects "Rotation" and "Spiral"

  (look at the end of the example)
+ New short-cuts for the viewer ('Enter', '0', '[Shift](', '[Shift])')

Durs Locher has released the first version of Olympia. Olympia allows you to control digital cameras via the serial port. It is a modern GEM application with all the bells and whistles. It should work with Agfa, Epson, Sanyo, Nikon, Sierra Imaging and probably Toshiba cameras as they use similar comunication protocols. Olympia has been successfully tested with the following cameras: Olympus SR83, Nikon E900, Epson SR82, SR86. It costs about 50 Euro.

The task will be to create the best possible conversion of a classic game.
This game has to run under MagiC (doesn't mean it shouldn't work under
TOS/MiNT as well) in a GEM window. But simply follow the link to
read everything you need to know.

The multi-functional multitasking system monitor Fritz has been updated.
It is a bugfix release that corrects several small things like the
monochrome display, Fritz factor etc.

Joe, the HTML editor, version 1.45 is out now. It is available in English,
German and French. The modules package (Joe's Good Tricks) has not
changed since version 1.42.

New since version 1.42 are, besides other things, the Kurzel feature
known from the ASCII editor qed, including automatic expansion, a
contextual menu (right mouse button click) and a ST-Guide help system.

For download of any version and a table of changes, a description etc.
see below; for downloading anything but Joe's Good Tricks, you can also
visit the temporary site of Pierre Tonthat (author of the program):

GSExec is a new GEM Script interpreter by Harald Becker based on a
C like language which has its' roots in the macro language of the popular
text editor JAnE. It is not as feature packed as the ASH Scripter
but probably in a future version (feedback is very welcome).
GSExec is fairware.

Joachim Fornallaz has released a new Version of GEM-Setup. Here is a
run-down of additions and fixes:
- Serial Number support (done by an external program).
- Option allowing that only root directories are allowed as paths.
  The path settings are now handled by a pop up menu.
- All installed files can be deleted.
- New installation type: HOME. This way files can be installed to the
  $HOME folder.
- GEM-Setup saves the paths in a file. This way all paths don't have
  to be set again when installing/uninstalling.
- Setting the number of files of an archive in the GSC file
  improved the accuracy of the progress-bar.
- Display of the free space on the HD and the space needed for the
  installation. If there is no space left the correct error message
  will now be shown.
- The installation process can be canceled by pressing [ESC].
- MagiC PC - Bug fixed.
- Installation with several disks works again.
- Objects (FILE/ARCHIVE) can be preselected by adding SETS=1 to the
  correspondent entry.
- The options \"[x] Overwrite all older files\" and others are now
  used for the whole installation process and not just for one archive.
- Several optimisations and bugfixes.

The scanning software GT-Look II has been released as freeware.
Sadly that means no more support for this product as well.
Some small improvements and fixes have been made and you can download
the free version here.

The SSD Compo results are now online together with a nice music
demo which includes all compo contributions together with some
bonus tracks. Get it from the DHS scene section.

For a long time the all in one Internet solution had no homepage
with up to date versions, info etc. Actually this is still the
case but you can now at least grab up to date betas from the following site.

The Digital Antic Project (http://www.atarimagazines.com/) is an ongoing effort to put the full text of Antic Magazine on the Web. We just added two issues from 1986.

The project now has the full text of more than one-quarter of the Antic issues that were published.

Here are the issues and articles that have been recently added:

January 1986 - Vol. 4 No. 9 - Atari Products Are Back!

Mapping the XL/XE New from the author of the classic Atari guidebook
Dandy Dissolver Spirals & horizontal sweep effects
Dungeon Master's Apprentice A Dungeons and Dragons scorekeeper... and more
Appointment Calendar Organize your personal schedule
Atari Bingo Caller Random number generator at work
Two New Modems Tel-A-Modem and MultiModem
Basic XE From O.S.S. Ultimate BASIC for 8-bit Atari
ST Font Loader New character sets in RAM
ST Listings on Monthly Disk ...and how to get them
ST-Ware From Two Continents Is U.K. now in the lead? A description of software at the PC World Show in London
TOS Roadmap Inside Tramiel Operating System
ST Product News ST reviews of Hex, Chat, and Express
Sysop Santa Claus Last-minute gift help online
Game of the Month - Wireball An abstract one-player arcade game
I/O Board
Error File Corrections to past programs
Antic Online/Worldwide Users Network
Editorial Results of the 1985 Antic Survey
Product Reviews Kennedy Approach, Halley Project, Wishbringer, Mindshadow, Twirlybird, and Objective: Kursk
New Products Bomber/Evader, PST-8B Interface, Ace 80, Racing Handicapper, Assembler and Linker, Teacher's pet, Power Star,
Top-DOS 1.5, Computer Printer Commands, Coin Collector/Photo Collector, Battalion Commander, Acrojet, Targets, Covox Voice
Master, Karateka, Championship Lode Runner

February 1986 - Vol. 4 No. 10 - Printer Power

    Atari'Toons Contest Winners
    Printer Picks New Epson, C.Itoh, Okidata models reviewed
    Ultimate Dot-Matrix 24-pin Star Micronics SB-10

Programmers that aren't all that familiar with the German language
can finally have access to MagiC documentation thanks to Pete West,
Guy Harrison and a few others that has been working on this for a while now.

As stated on their page the docs are "offered as is, free for the
benefit of the Atari community."

The Digital Antic Project is an ongoing effort to put the full text of
Antic Magazine on the Web. We just added three issues from 1984.
Check them out: http://www.atarimagazines.com/

Of particular interest:
A "first look" at AtariLab, including descriptions of modules
that were never released --
http://www.atarimagazines.com/v3n6/atarilab.html

A preview of Alternate Reality: The City --
http://www.atarimagazines.com/v3n7/Coming_Adventures.html

Here is a complete list of the new issues and articles:
September 1984 - Vol. 3 No. 5 - Computer Graphics
Atari Art Printouts Modern art on a dot matrix printer
Drawing Fun Sketch in nine colors
Antic's Mode 3 A special character mode
Computer Graphics Product Survey Unlocking the art inside you
Price's Color Picture Painter 128 colors in every picture
Easy Graphic Converter Mix and match graphics from four popular products
Fader: A Classy Video Slide Show Dot-by-dot dissolves between pictures
Starting Out - Unlocking the 56 Graphics Modes
Education - Telling Time in Pilot
Communications - Networking News
Assembly Language - Rotate Your Player
Assembly Language - Copymate
Toolbox - Customizing Basic Key Functions
Game of the Month - Olympic Dash
I/O Board
Help!
New Products Graphics Magician Picture Painter, The Color Sharpener, Rome and The Barbarians, 50 Mission Crush, Physics Examples
I, Computer Titlebout, Skywriter, 600XL Memory Expansion Modules, Atari Automatic Station Switcher, Nubasic, Super Sketch, From
Scratch, Assembly Language Tutor, ParallAx-AT
Product Reviews Rainbow Walker, The Seven Cities of Gold, Pitfall, Drol, Carrier Force, NATO Commander, Omnitrend's Universe,
Atari BASIC Faster and Better, Codewriter, Advanced Programming Techniques For Your Atari
Microscreens

October 1984 - Vol. 3 No. 6 - Computer Learning Magic
Mole Attack Educational Game
Plus Minus Educational Game
Brain Research With The Atari Mapping brain receptors at medical school
Educational Software Antic's top 18 hits
Atari at a Science Museum U.C. Berkeley's Lawrence Hall of Science workshops
Program the Bouncing Ball Player/Missile graphics tutorial
Antic 4/5 Editor/Animator High-powered animation program
Rating Computer S.A.T. Preparation Courses
Spray Painter Graphics power in a 10-line program
Inside Atari - Atarilab
Communications - Plato Teaches
Communications - Plato's Top Classes: a Sample

From comp.sys.atari.8bit:

With all the interest in the basic compilers I have spent some time putting
Datasoft's Atari Basic Compiler manual into html. If you want to check it
out, it's on my website http://www.geocities.com/BourbonStreet/1055 I still
have to finish the glossary and appendices, but the meat of the manual is
there. It is broken up by chapter, and I would like to do a single html page
with the entire manual also. I hate having it broken up, but that was the
easiest way to start it. I also have the manual in Microsoft Word format. If
a lot of people are interested in that, I can put it up on the website for
download as well. It needs a little work too, but is 90-95% complete. I have
had good luck with the compiler, and I can attribute a lot of that to the
manual. It's very helpful in a lot of situations and explains how to fix a
lot of problems I had initially trying to compile a basic program.

If anyone can help me to take a compiled program and get it to where I can
burn it onto and eprom and make a cartridge out of it, I would be eternally
grateful. My problem is that the code from the compiler is assembled to run
in a different location than if it was loaded as a cartridge. I know enough
to know that I can't get it to relocate.

Let me know if it helps anyone.

Yep there is a little update of the SSD intro. I had forgot to shut
off the keyklick, now fixed. Thanks to Dma-Sc for telling.

Persistence Of Vision 3.1g has been compiled for all
ATARI machines. The news for the ATARI version is that the
timer is now accurate to 1 second. All other news are the
same that the official 3.1g. Have fun with it. This image
synthesis software is more powerful.

The multimedia player Aniplayer has been updated to version
2.07. New in this release: AVI/MOV export (rle) of AVI/MOV/FLI
and MPG movies, updated sound configuration with digital
output support (not tested), updated display configuration
and bugfixes. Aniplayer is shareware.

--------------------------------
1)  Go to the directory where you want the files to be downloaded.
2)  ftp [CR].
3)  open {ftp address} [CR].                  i.e. "open ftp.uni-kl.de" [CR]
    OR use the (IP) number address, NOT both!
4)  "Name": anonymous [CR].
5)  "Password": {full e-mail name/address}.  i.e. "hallvart@ifi.uio.no" [CR]
6)  use "cd" to access the appropriate directory.  i.e.  "cd pub/atari" [CR]
7)  bin [CR].    (set `binary` transfer mode)
8)  hash [CR].   (shows 'hash` signs (#####...) when transferring data)
9)  get {filename} [CR].      i.e.  "get rename.lzh" [CR]
10) mget [CR] to get several files at once.
    i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having
    to reply "y" for each file when asked "get {filename}?".
12) quit [CR] to end FTP session and go back to UNIX
13) close [CR] to close the FTP site you're currently on, so that another
    site can be opened without having to set bin, hash, prompt etc. again.

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on
  which the programs were intended, or in UNIX .......
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after
  uncompressing .Z and/or .uu.
  Use the appropriate decompression program for this.

- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path.  i.e.  /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
    i.e.   "mget *sys" [CR]  (will get f.x.; datasys, lm23isys,
    xlinksys etc...) (ALL files with "sys" in their names)
    i.e.   "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh,
    xlba.lzh etc...) (ALL files ending with ".lzh")
```

    i.e.   "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to
  another computer (use an other terminal's disk drive);
- rlogin {computer name} [CR].   i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

Part of this is dependent on you having the GNU msdos-utilities available
at your site. If you don't, ask your local system operator how to transfer
files to/from MSDOS disks.

- mcopy {filename} a: [CR] i.e.   mcopy microtcx.zoo a:
                           i.e.   mcopy microtcx.zoo icone.lzh shblr.arc a:

- mdir [CR] to show disk-directory/space left.

- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)

- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for
  "low density")

- mcopy a:{filename on disk} {copy filename} [CR] to get a file from
  disk to computer.   i.e. "mcopy a:dlist.txt test1.zip"

- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

- eject [CR] to eject disks from disk-drives that don't have "eject buttons".

             -

     ====================
     =  Spooky Sprites  =
        ====================
```

Spooky Sprites is a true colour sprite creator for the Atari Falcon 030.

The marvelous features are these:

Choice between uncompressed, compressed or both formats at once when saving.

Special fxs e.g. colour filter, plasma, darken, smooth, enlarge ...

Animation (of course).

It doesnt like VGA monitors or computers with less than 4 megs of memory.

An assembler routine for sprite drawing will probably be available in falclib6.

     It has been uploaded to ftp.cnam.fr and is called spooky.lzh

Atari Web Pages Latest News

Version 1.0

Date 27/2/95

by

Mark Stephen Smith

4th Update

Foreword

Hello and welcome to the news item on the Atari Web pages. This document will describe the Atari Web pages as provided by Mark Stephen Smith and will inlcude a list of the latest updates for the month. Each month I hope to update this text with the very latest additions and news on the Atari Web pages.

Hopefully these pages will provide an invaluable service to their users, but they are still at an early stage and developing all the time. As such any feedback and support you may have for these pages is more than welcome, it is infact encouraged. The more input I get from its users the better, as then I will know what is good and bad about these pages and can change them approproately in the hope of increasing their value to their readers.

Now on with the show.

News and Changes

Well since the original description a lot has happened. I'm now involved in several projects, and submit work to several Internet and diskmag sources for inclusion. I have also officially took over the maintenance of the Atari FTP list from Hallvard Tangeraas of which there have been a couple of updates.

New items in this document since the last copy will be marked with **, updates

will be marked with a U. All new items are also listed below according to the date they were added.

The new items this month are:

27/2/95 -- Towers II : Plight of the Stargazer Update!
27/2/95 -- Falcon Owners Group Magazine No.8.
23/2/95 -- Atari FTP List Update
22/2/95 -- HENSA Atari TOS Newsletter Volume 8. No.4
22/2/95 -- HENSA Atari Falcon Newsletter Volume 8. No.2
22/2/95 -- HENSA Atari MiNT Newsletter Volume 8. No.2
22/2/95 -- MIDI Grid Review by Andy Curtis
8/2/95 -- Utopus Two player shootem' up (STE) 231K
8/2/95 -- Downloadable files in Falcon/ST sections now have file sizes listed
7/2/95 -- Hyper Image pages link (contains Hover Hunter news)
7/2/95 -- Mail to me directly using this link
7/2/95 -- New inlined Atari logo for Web pages by Frank Charlton
7/2/95 -- AEO Newsletter Volume 4. Issue.2 in text and ZIP format
6/2/95 -- Pinball Dreams and Llama Zap Falcon News
6/2/95 -- News and Announcements section added
6/2/95 -- HENSA Atari TOS Newsletter Volume 8. No.3
2/2/95 -- Lynx FAQ updated
2/2/95 -- Jaquar FAQ updated
2/2/95 -- Connect Review by Frank Charlton
2/2/95 -- Zero 5 Review by Frank Charlton
1/2/95 -- Atari FTP List Update
31/1/95 -- AtariNOS FAQ
30/1/95 -- CAIN Newsletter Volume 2. No.1

==========

What are the Atari Web pages?
~~~~ ~~~ ~~~ ~~~~~ ~~~ ~~~~~

These are a collection of pages covering all formats of the Atari. In these pages may be found the latest news, reviews, software for downloading, and various other information and links to other places of interest to Atari users.

I have tried to make the structure of these pages easy to follow and as intuitive as possible but there is still a lot of work to be done yet.

==========

How do I access them and what is the Web?
~~~ ~~ ~ ~~~~~~ ~~~~ ~~~ ~~~~ ~~ ~~~ ~~~

First of all I shall look at what the Web is or to use its full name the World Wide Web. The Web is new way of accessing the Internet, unlike previous methods where you were required to enter commands into the program you were using the Web uses a more user driven method of getting around the Internet. This method is much more graphical than former methods and as such is much easier to get to grips with.

When using a Web browser (the name given to a program used to access Web pages) the control method usually consists of a point and click operation. A Web page will consist of text and graphics which are sometimes highlighted in some way to indicate that they are selectable and link to more information or a particular piece of data.

Such a link is reffered to as a hyperlink. In fact the whole system is a variation on hypertext and uses a script to create each page. Each script is written to a HTML (HyperText Markup Language) standard which contains the main body of text in the page and a few command tags for the browser as to how to format the page and what to do with links, etc.

Web pages may contain text, graphics, sounds, and animations, although the later two are normally supported through external software. It is also possible using the Web to gain access to newsgroups, ftp sites, and gopher services all through the one program. As such this makes this a very powerful tool for Internet access, and coupled with its ease of use this has suddenly became the big thing in the recent Internet explosion into the media.

Browsers can handle all properly written HTML scripts but may vary in operation when scripts are incorrect or contain mistakes. Browsers can be divided into to distinct types, graphical and text only. Popular graphical browsers include NCSA's Mosaic and the recent new browser NetScape. On the text side Lynx is the most popular textual browser (NOTE: text browsers don't show any form of graphics).

To access the Web you must either use one of the above mentioned browsers on a machine such as a Sun, PC or Mactintosh, or if you want to access it via your Atari you will need a copy of the Lynx browser as unfortunately there aren't any graphical browsers YET for the Atari.

Next month I will give full details on how to access the Web using the Atari.

==========

Where do I find the Atari Web page?
~~~~~ ~~ ~ ~~~~ ~~~ ~~~~~ ~~~ ~~~~

>From your Web browser choose to open URL and enter the following address:

http://www.dl.ac.uk/MISC/ATARI/atari.html

If you can store a hotlist of addresses or something similar on your browser then it may be worth including this address for quick access in the future.

Once you've done that you should see my main page so I hope you enjoy it, and don't forget to write with your thoughts.

==========

U What you will find in the Web pages every month.
~~~~ ~~~ ~~~~ ~~~~ ~~ ~~~ ~~~ ~~~~~ ~~~~~ ~~~~~

>From the main menu you have several links available to you, some under miscellaneous and others specific to a particular machine, or collection of machines. It is now possible to mail me directly from the Web pages, special thanks also to Frank Charlton for the new Atari Logo. First I will look at what will be in the Miscellaneous section.

****

Atari Related links, Documents, FAQ's and Newsletters
~~~~~ ~~~~~~~ ~~~~~ ~~~~~~~~~ ~~~~~ ~~~ ~~~~~~~~~~

First in the list are "Atari Related Links", these links are to other sources of Atari information or data (such as files, etc.).

There is a link to many of the major Atari holding FTP sites on the Internet. Links to several Web pages by different people on the Atari. This will grow as worthwhile sites come up. At the moment you can visit:

- HENSA to download Atari files (Moderated by Denesh Bhabuta)
- ZFC's Atari Pages by Annius V. Groenink. This has links to various Atari related places, along with talk of his own work on Edith and his new Drive U Project. Annius is also working on a version of the Mosaic browser for the Atari and the best of luck goes to him on that.
- Christer Gustavsson's Atari Gem Programmers Page. Very useful information for programmers grapling with Gem and the operating system. Also offers help via his questions answers page. Some links can be found to Atari related places.
- CAIN Atari Pages. CAIN is the Central Atari Information Network and they create a newsletter which is updately monthly on all things new to do with the Atari. There are also links available here.
- Martin Maisey's Atari Pages. Contains information (downloadable) on programs written by himself for the Atari. Again there are links to other Atari places.
- Toad Computers Pages. Stockiest and retailer of many Atari goods.
- ST Format Pages. Information and previews of ST Format issues.
**Hyper Image Pages. Contains Hover Hunter Jaguar news.

This section will have a page dedicated to it this month as over 30 new Atari related links are added.

Documents
~~~~~~~~~

Useful documents will appear in here. At the moment there is:

U Atari FTP List by Mark Stephen Smith (essential for the latest news on who provides Atari FTP sites).
- Atari TOS Desktop Survival Kit by Thomas J Hopper. An essential guide to getting the most out of your DESKTOP.INF and NEWSDESK.INF files.
- Recommended list of software for the Atari by Denesh Bhabuta. List compiled by Denesh for me of his best software for the Atari (updates coming soon). Mostly PD and Shareware, this list contains links to download most of the software mentioned.
- Information on picture formats by Dave Bagget. Lots of information on the

format of different picture files for the Atari.

FAQ's (Frequently Asked Questions)
~~~~~ ~~~~~~~~~~ ~~~~~ ~~~~~~~~~

Useful FAQ's will appear here. At the moment there is:

- Atari ST SLIP FAQ. This is a guide to connecting your Atari to a network. All you want to know about networks and the Atari.
- Atari CD FAQ. Information on getting and using CD's on the Atari. Regular updates to this can be found in my pages.
- GDOS FAQ by Gerd Castan. Got a question on GDOS then this is the place to look.
- MiNTNet FAQ by Christer Gustavsson. Everything you wanted to know about MiNTNet.

**AtariNOS FAQ by Frank Charlton. Answered questions and information on NOS.

Newsletters
~~~~~~~~~~

Although there may be more to come the following newsletters are updated promptly as I receive them. These have been re-organised to make it easier to keep track of. At the moment there is:

U CAIN Newsletter containing the latest Atari news.
U HENSA Newsletter containing the latest updates to the HENSA Atari archive.
U AEO Newsletter containing the latest Atari news.

Newsgroups
~~~~~~~~~~

Atari related newsgroups. Send updates. The currently supported news are:

comp.binaries.atari.st
comp.sys.atari.advocacy
comp.sys.atari.announce
comp.sys.atari.st
comp.sys.atari.st.tech
comp.sys.atari.programmer
rec.games.video.atari
alt.games.lynx

****

Questions and Answers
~~~~~~~~~ ~~~ ~~~~~~~

Submit your questions to here and get them included in this page. Answers are open to anyone who has something valid to say, and help is provided to me on Programming and Music questions by several knowledgeable sources. Please support this section, only by your interaction and questions will it survive. All answers are included in this page for anyone else with the same question and

answers are also sent back to the person who submitted the question for those without Web access.

If you feel you have an expertise in a particular area concerning the Atari and would be willing to answer questions on that area when and if I submitted them to you, then please let me know and you can join the team. Programming and Music are fairly well covered and I can cover Graphics programs, help with Technical questions would be appreciated.

****

Reviews
~~~~~~~

Here I hope to include reviews of Atari products both new an old. So far I have the following reviews:

- Kobold review by Andy Curtis (ST Format)
- Flash 2 review by Frank Charlton (ST Format)
- Edith Professional review by Frank Charlton (ST Format)
- MagiC review by Andy Curtis (ST Format)
- Stello v2 review by Mark Stephen Smith (Myself)
- Sportster Modem review by Frank Charlton (ST Format)
- Storm Tracker review by Andy Curtis (ST Format)
**Connect review by Frank Charlton (ST Format)
**Zero 5 review by Frank Charlton (ST Format)
**MIDI Grid review by Andy Curtis (ST Format)

There are several reviews on the way by the above mentioned people aswell as some by myself (finishing review of Apex Media for the Falcon). This section is now growing well.

Again if you feel you would like to submit reviews for inclusion then please write to me. Please note these pages don't include Lynx and Jaguar Reviews, as they are contained within their own pages.

****

**News and Announcements Pages
  ~~~~ ~~~ ~~~~~~~~~~~~ ~~~~~

Latest Atari news, and announcements from the Atari World. Currently contains the following:

**Universal Virus Killer Book Announcement

****

Updates and Information on these Web Pages
~~~~~~~ ~~~ ~~~~~~~~~~ ~~ ~~~~~ ~~~ ~~~~~

All updates and news on the Atari Web pages goes in here. Previews of whats to come soon are included and new items or updates to the pages are listed
~~~~~~~

according to date with the most recent being first. Most updates contain links to the new material for instant access.

Other things to be found in here are the number of accesses to the Atari pages. Unfortunately the way the logs are now stored prevent me from calculating the number of accesses to these pages in the future.

****

This now concludes the Miscellaneous section. Now onto the Other Pages. These pages are specific to a particular machine, or collection of machines. These are going to go through some major changes and you can expect a fair number of changes to be made to these in the next month or so.

****

Falcon Page
~~~~~~ ~~~~

This will contain information and files relevant to the Atari Falcon, currently this page is divided into the following areas:

News and Previews
~~~~ ~~~ ~~~~~~~~

In here expect to see any news or previews that come my way, whether they be small descriptions or full features with pictures. At the moment there is:

**Pinball Dreams and Llama Zap News.
- Apex News. This contains some information I got on Apex Media for the Falcon when I spoke to Douglas Little on the phone a few weeks back. Not very detailed unfortunately, but I'm waiting on my copy of Apex to give a full review so expect that to be rectified soon.
- Dextrous News. Small description of some of the features of Dextrous with a picture. Only at an early stage of development, if I hear more it will go in here.
- Towers II : Plight of the Stargazer. Pictures and description of this great looking Falcon only sequel to Towers. Expect the demo soon.

**Towers II : Plight of the Stargazer Update! The latest news on developments.
U Newsletters from HENSA on Falcon section of archive.

Misc
~~~~

Miscellaneous information on the Falcon, including:

- Falcon Demo FAQ. List of Demos for the Falcon, including some form of information on each.
- Compatibility list of games with Falcon.
- Compatibility list of applications with Falcon.
- Falcon Specifications and Information compiled by Rod McCall.
~~~~

New Software
~~~ ~~~~~~~~

The latest Falcon/enhanced software available for download. Major revisions to be done with updates here. All files now list there size so you can see how large they are before downloading. At the moment the following software is included, with more to come:

- Super Bomber Man (freeware)
- Play MPEG v0.70 by M.D.Griffths (shareware)
- Speed of Light v3.5 (shareware picture viewer)
- Scape a planetary landsacpe generator.
- Digital Tracker demo of commercial version.
- Obsession 1 level demo.

U FOG issue 8 diskmagazine for Falcon.

Other software worth having
~~~~~ ~~~~~~~~ ~~~~~ ~~~~~~

Software worth using on the Falcon.

- Backward v2.52. For compatibility with the ST. Please send any versions which are newer than this.
- MultiBlow. Configurable overscan utility.
- Starball. Excellent pinball game (Falcon enhanced).
- Berzerk. Excellent version of Berzerk (Faster on Falcon).
- FOG issue 7 diskmagazine for Falcon.
- FOG issue 6 diskmagazine for Falcon.

****

Atari ST/STE/TT/Mega STE Page
~~~~~ ~~~~~~~~~~~~~~~~~ ~~~~

This will contain information and files relevant to all the above mentioned Atari formats, currently this page is divided into the following areas:

News
~~~~

In here expect to see any news or previews that come my way, whether they are small descriptions or full features with pictures. At the moment there is:

U Newsletters from HENSA on TOS section of archive.

New Software
~~~ ~~~~~~~~

The latest (most recent versions) software available for download. Major revisions to be done with updates. All files now list there size so you can see
~~~

how large they are before downloading. At the moment the following software is included, with lots more to come:

- Speed of Light v3.5 (shareware picture viewer).
- ST Zip v2.6. Latest version of ST Zip.
- Obsession demo. 1 level of this great pinball game.

Other Software worth having
~~~~~ ~~~~~~~~ ~~~~~ ~~~~~~

Software worth having on the Atari.

**Utopus. Two player shootem' up (STE only).
- Ozone. Good platform/puzzler.
- Starball. Excellent pinball game.
- Berzerk. Excellent version of Berzerk.

****

Lynx Page
~~~~ ~~~~

All the latest news and reviews on the lynx, along with cheats, etc. This page is divided in to the following areas:

News
~~~~

News on the Lynx and related material. At the moment there is:

- Lynx Summer Steal Deal Extended to the Fall. News of price reductions for a limited period.

Reviews
~~~~~~~

Reviews for just about every Lynx game ever released will appear in here. All reviews are by Robert Jung. At the moment the following reviews are included:

APB	Awesome Golf	Baseball Heroes	
Batman Returns	Basket Brawl	Bill and Ted's	
BlockOut	BattleWheels	Blue Lightning	
California Games	Checkered Flag	Chip's Challenge	
Crystal Mines II	Dino Olympics	Dirty Larry:Renegade Cop	
Dracula the Undead	Double Dragon	Desert Strike	
Electro Cop	European Soccer Chal.	Ultimate Chess Chal.	
Gauntlet:3rd Encounter	Gordo 106	Hard Driven'	
Hockey	Hydra	Ishido : Way of Stones	
Jimmy Conners' Tennis	Joust	Klax	
Kungfood	Lemmings	Lynx Casino	
Malibu Bikini Volleyball		Ms.Pac-Man	

NFL Football Ninja Gaiden
Ninja Gaiden III : The Ancient Shop of Doom

Other Lynx Stuff
~~~~~ ~~~~ ~~~~~

Other items of interest to Lynx owners. At the moment there is the following:

U Lynx FAQ
- Lynx Tips and Tricks

New Software Anouncement
~~~ ~~~~~~~~ ~~~~~~~~~~

Currently empty.

****

Jaguar Page
~~~~~~ ~~~~

All the latest news and reviews on the lynx, along with cheats, etc. This page is divided in to the following areas:

News and Previews
~~~~ ~~~ ~~~~~~~~

All the latest news and preview information I can find related to the Jaguar.

- Jaguar CD Specifications
- Rebellion Development News
- Sinister Developments News
- Sensible Soccer News
- Coming Soon!
- Hand Made Software News

Reviews
~~~~~~~

A collection of reviews from different sources, hopefully I will be contributing more to this section myself. Reviews so far include:

Aliens versus Predator Raiden Tempest 2000
Cybermorph
Aliens vs Predator Trevor McFur in Cresent Galaxy
Brutal Sports Football Dragon: The Bruce Lee Story
Wolfenstein 3D Checkered Flag
~~~~~~~

There are many more reviews to come.

Other Jaguar Stuff

Miscellaneous information on the Jaguar. Information included presently is:

U Jaguar FAQ
- Raiden Tips
- Jaguar Game Cheats
- Kasumi Ninja FAQ
- Ultra Vortex FAQ update for Jaguar

Other Jaguar Pages

Other pages specific to the Jaguar included in here. Currently there is:

- Atari Jaguar Homepage by Christian Svensson

There are others that will be included, some containing more recent news, but the one above is the most organised and intuitive one I've came across.

****

8 Bit Atari Page by Ivo van Poorten

Not maintained by me these pages cover the 8 bit formats of Atari machines and are very comprehensive. Nearly everything you could hope to find is contained within these pages.

****

What to expect in the future

Some structural changes are likely to appear in the next months. I have introduced an announcements page where you can tell the World of anything you have to announce. Please send news of updates to your programs, Atari stuff for sale, and any other Atari announcements here (NOTE : Commercial companies should send information on products to be included in here and in the news sections).

Also coming soon will be a monthly editorial. In this I will try and sum up the month past and to give my opinions on how I saw things for Atari at that time. Hopefully I will be able to look back over many good developments in my pages and summarise them as they happened.

There is an outside possibility of starting a programmers and MIDI section in these pages but this is as yet undecided. I will judge whether or not to do

this based on the kind of response I have. I do not want to repeat any of the good work done in these fields however by other Web page writers such as Christer Gustavsson.

More support is needed for the questions and answers pages, although initially successfull people just stopped posting their questions. Although the odd one is still coming and answers are still forthcoming. Please support this, it is of benefit to anyone who uses it.

The Jaguar section should have a lot more news, pictures and reviews in the future. I have tracked down a fair bit of news and am in contact with a few companies now and hope to get news from them on there products.

Extra pictures will appear due to my recent access to a colour scanner, enabling me to scan the latest pictures before the exist elsewhere on the Internet. I also hope to slowly get all the maps for AvP into these pages somehow?

Both the ST and Falcon sections should contain much more news in the future, along with more of the best PD/Shareware, and PD/Shareware reviews. I should have several demos hopefully in the near future for games coming out on these formats.

The Lynx section is to continue to get reviews and I will update the news as and when I get it.

Expect more links to Atari related pages in the future, this section will be getting it's own dedicated page as over 30 new Atari related links are to be included this month. There will be more newsletters, documents, updates to the FAQ's.

Expect further reviews from Andy and Frank, along with myself (watch out for the Apex Media review). Hopefully I can include more screenshots, and do a few program tutorials. Also Claus J. Pedersen (Stello author), Bob Brodie (former Atari employee) and Steven Davies have all offered to support these pages with contributions in the future.

Please write with your ideas, critisms, comments, submissions (software, news, reviews, questions, etc), to me and don't forget that I am now the official maintainer of the Atari FTP list originally by Hallvard Tangeraas. All updates to this list should now be sent to me.

Thank you and see you with the updates to these pages next month!

Hello everybody.

Stello 2.1 othello is out with features such as

- Works under Gem, all Atari computers, all screen resolutions, (x resolution must be at least 640).
- Supports Multitos and WINX.
- Uses multitasking under Multitos.
- Advanced gameplaying algoritms, alfa-beta minimax, iterative deepening, response killer table, saves game tree and uses the zerowidth minimax modifikation.
- One of the best Othello programs in the world.
- Background pictures on the board as black/white or color.
- RSC files in english, german, french and danish.
- Dialogs in windows.
- Nice interface (3d buttons and checkboxes even under old tos versions, niceline menus, animation of disc's).
- Printing of moves, board and transscript as ASCII, GDOS or Speedo GDOS.
- Export of moves, board and transcript as ASCII or META file. This means that you can take the output and use it in a wordprocessor that supports import of META files.
- You can set the size of the output, (boardsize of 4 - 16 cm) 2 types of transcript, (with or without disc's) and turn on/off the border text (a b c d e f g h, 1 2 3 4 5 6 7 8)
- There is a (very primitive) fontselector, and you can choose the output device (printer from 21-30 and meta file from 31-40)
- Context sensitive help with St-Guide.

New in Stello 2.1

- All menuitems can now be reached via keyboard shortcuts. The user can change the shortcuts by changing the RSC file.
- Menu layout changed to be more like the GEM standard. (Gerd Castan)
- Mouseform changes are now done inside a wind_update(BEG_MCTRL), wind_update(END_MCTRL) block as they should be. My error :-(
- Fewer graf_mouse(OFF), means the mousepointer dosen't flash so much.
- Saved endgamelevel settings now used correctly on startup.
- German RSC kindly corrected by Thomas Cloer.
- Internal timer uses a system vector instead of the Timer A interrupt. This means that you now can use Stello together with other programs that uses the Timer A interrupt.
- Better communication with St-Guide under Multitos. (The memory protection flag for Stello can now be super instead of global)
- Basic Othello Strategies by Colin Springer included in helpfile.
- Various minor bugfixes.

More details in the documentation. Stello is a Shareware game. I have uploaded the game to the following ftp sites, in the file STELLO21.LZH. atari.archive.umich.edu, micros.hensa.ac.uk, ftp.cs.tu-berlin.de, ftp.uni-kl.de, ftp.cnam.fr.

Happy Othello playing.
Claus J. Pedersen.

I've just uploaded a new version of my shareware game TETRHEX to atari.archive.umich.edu under the name tetrhex123c.zip. It will appear in the directory Falcon/Games in a few days.

****

```
*                              *
*         TETRHEX 1.23         *
*                              *
*  written by Vincent Lefevre  *
*                              *
********************************
```

TETRHEX is a shareware game, or rather a group of Tetris-like or Columns-like games, being played on a hexagonal board, with hexagonal cells. TETRHEX runs on the Atari Falcon 030 with every kind of color screen, but should be able to run on any Atari (or other TOS-based computer) having at least a 68030 and a Falcon compatible (i.e. interlaced planes) graphic mode 256 colors >= 640 * 480, possibly with a substitute operating system (TOS/GEM compatible).

Main features:

- You can modify existing rule files and create your own rules in a TETRHEX-specific language.
- TETRHEX uses GEM functions, except for some displays. Therefore it is compatible with many system programs (in the AUTO folder): NVDI, SpeedoGDOS, Screen Blaster card, Outside, MiNT/MultiTOS, ...
- TETRHEX can display outline fonts if SpeedoGDOS or NVDI 3 is active. You can choose the fonts. TETRHEX automatically selects the most suitable font height, according to the font and the text to display.
- Many options; configuration on 2 levels as Unix-like options: permanent (in a file) and at the start.
- You can play on the whole screen or in a GEM window (AES 4.1 is supported: the window can be iconified).
- List of languages to use in order of preference, particularly useful because of the help in rule files. By default, the language of the system is preferably used.
- The hexagonal board has a variable size (4 different sizes).
- TETRHEX can save up to 255 scores for each rule and each size of the hexagonal board.
- You can give a group of relocatable routines enabling TETRHEX to communicate with the outside. Possible applications (some routines don't exist yet): playing with the Joypad (instead of the keyboard) or even playing using your voice (thanks to the DSP), having .MOD modules played in background at given moments, putting images at the background, making the computer play, ...

-----BEGIN PGP SIGNED MESSAGE-----

Coming soon to an atari.archive mirror near you, version 1.1.4 of my
stand-alone C preprocessor. Changes since 1.1.2 include:

New options:
  o -Wunknown-pragma, to warn about #pragma's that cpp doesn't
    recognize.
  o -pedantic, to catch "technically illegal" constructs. Currently
    only the obscure `0x123e+5' gotcha from ANSI/ISO 6.1.8 is detected.
  o -fimplicit-newlines, to allow string literals with embedded
    newlines,

     "like
      this"

    to accommodate code written for certain rather irritatingly
    nonstandard compilers (we won't mention GCC's name).

Optimizations:
  o Improved handling of (read: less processing done on) lines inside
    the false branch of an #if[[n]def] conditional.
  o Minor memory management tweaks, yielding roughly 15% speedup.

Bugfixes:
  o Mostly obscure corner cases.

c68 users take note: Future versions of the c68 MiNTlibs will require

cpp v1.1.4 or later to compile. Upgrade now!

Speed of Light version 3.7 Image Processor is finally unleashed!

Since I can't seem to get into atari.archive.umich.edu (or msdos)
I'm thinking about just posting the ZIP file here uuencoded. Any objections?

Please tell me your favorite FTP sites, and I'll upload it there, too.

When you get a copy, let me know what you think!

Here's a list of the changes in version 3.7:

Changes in version 3.7 from 3.5
==============================

-=> "New" now works when using Selectric Fileselector or wildcards. The
first file replaces the current one, and all the others are added to the end
of the image list. If you are using Selectric, you can also select multiple

files to load at one time.

-=> Slideshow feature was added to automatically flip through the images in memory. Control direction, wrapping, start image, end image, and display time. Hidden drawing supported. And for more power...

-=> Speed of Light now supports a powerful scripting language for customized slideshows. You can write your own Speed of Light Scripts (.SLS) from scratch, or simply let SOL write them for you by recording your actions. When using slideshow scripts, you can even load and uncompress images in the background while viewing the last image!

-=> Speed of Light can now be run from resolutions with less than 16 colors (monochrome too!). The color editor and filtering may not be used, however. You can now use SOL from Medium resolution, and still display in Low resolution (on STs). Monochrome users can now also use SOL (with dithering, of course.)

-=> Lines (for clipping and zooming) now look right in monochrome and 4 color modes.

-=> GIF uncompressing time now takes 85%-90% of the time SOL 3.5 took.

-=> You can now have the screen be blank when drawing the images so they appear instantly. Great for slideshows.

-=> Dithering was changed slightly to provide an easier user interface and support for future updates.

-=> Some user interface improvements like tabbed dialog boxes.

-=> Fixed some bugs in DSP JPEG code from v3.6.

-=> SOL now loads GIFs with local color maps without complaining.

-=> Other miscellaneous bugs fixed (you'll be amazed)!

Changes in version 3.6 from 3.5

-=> Added some DSP support code in the JPEG routine for the Falcon to make decoding faster. Greyscale and fixed colormap take 3 times more memory than without it, though. Still can use CPU decoding if out of memory or no DSP.

-=> Bug fixed that made STs and STEs bomb when switching to greyscale.

-=> Picture information box was added to the bottom of the screen while loading to give information about picture size, type, and number of colors.

Lexicor Software NOVA NEWS
==========

Lexicor Software is proud to announce a brandnew pricing structure for its customers. Please note that the NOVA Board is now also available by another distributor in Canada, but only Boards purchased by Lexicor Software or via a Lexicor dealer with the Lexicor warranty card is eligible for this great package.

Anyone who buys or owns a Lexicor Software bought NOVA Graphics Board is now entitled to a free gift. This is our way to show your appreciation and support of Lexicor Software.

If you are a Lexicor NOVA User (NOVA Megabus, NOVA VME, VME Plus, Plus 2, SuperNOVA or SuperNOVA Plus) then please send in your registration card. If you have already done so, then just send in a letter with you name and address so that we can check the name in the database and you can claim your gift!

One 3D2 and RD1 Special Design Disk, the Galactic Toolbox and Lexicor FLIC/X Utilities is the special gift. The Design Disks features some awesome 3D2 and RD1 designs for use in Phoenix and Chronos-3D.

New NOVA Customers receive the special gift as well as a copy of Phoenix Object Renderer or Raystart 1.1 Analytical Raytracer!

New NOVA Pricing is as follows:

NOVA Megabus (regular)
-250 U$D
NOVA VME (regular)
-250 U$D
NOVA VME Plus 1 Megabyte Version
-499 U$D
NOVA VME Plus 2 Megabyte Version
-599 U$D
NOVA VME SuperNOVA using the Mach64 2 Megabyte Version
-799 U$D

The regular NOVA is now not being made for either VME or Megabus so we only have stock left for sale, once the stock runs out that is it.

Lexicor Software continues to support the NOVA Board that it introduced into america several years ago, and is proud to announce the new competitive pricing range!

new SozobonX release available at new SozobonX home-site

SozobonX is the eXtended Version of Sozobon C, currently supported and maintained by some people.

SozobonX is a freeware C-Compiler system, based on the original Sozobon 2.00 release, to run under Atari TOS (+-MiNT) or compatible systems.
It includes GEM libraries and ST-Guide hyper-text library docs.

The adapted MiNT-lib (mntsox<PL>.lzh) is somewhat out of date but will be updated soon. :-)
There is an alternative compiler included (c68: sozc68<PL>.lzh).

HOMESITE: ftp.fu-berlin.de
PATH: pub/atari/programming/Sozobon
FILES: sozbin10.lzh, sozlib13.lzh, sozuti07.lzh, sozc6844.lzh, mntsox44.lzh

newsgroups: comp.sys.atari.announce

Speed of Light version 3.8 Image Processor/Viewer was just uploaded to
these ftp sites:

atari.archive.umich.edu
micros.hensa.ac.uk
ftp.cnam.fr

Filename: Graphics/spoflt38.zip

It can also be found on my WWW home page:

http://www.cs.washington.edu/homes/sdenman/

and eventually, the new version will appear on the Atari Web Pages:

http://www.mcc.ac.uk/~dlms/atari.html

under Falcon or ST/STE/Mega STE. Right now, only version 3.7b is there, but Mark should have 3.8 up soon.

This new version fixes most of the bugs in version 3.7(+ a & b) as well as some of the more serious bugs in clipping and color palettes. It also fixes some problems with older keycodes.

Please spread this Shareware version around to various ftp sites and BBS's and to all your friends!

-Stuart

APPENDIX

For those who don't know, Speed of Light is an Image Processor and Viewer for ALL Atari computers. It loads GIF, JPEG, IMG, PNT, and Degas Files. SOL has lots of image processing features like global and local palette manipulation, histogram transformations, warping, filtering, scaling, rotation, etc. The list goes on! The program is Shareware, and so some of the features are disabled until you register.

==========

Foreword
~~~~~~~~

Hello and welcome to the news item on the Atari Web pages. This document will describe the Atari Web pages as provided by Mark Stephen Smith and will inlcude a list of the latest updates for the month. Each month I hope to update this text with the very latest additions and news on the Atari Web pages.

Hopefully these pages will provide an invaluable service to their users, but they are still at an early stage and developing all the time. As such any feedback and support you may have for these pages is more than welcome, it is infact encouraged. The more input I get from its users the better, as then I will know what is good and bad about these pages and can change them approproately in the hope of increasing their value to their readers.

Now on with the show.

==========

News and Changes
~~~~ ~~~ ~~~~~~~

Well since the original description a lot has happened. I'm now involved in several projects, and submit work to several Internet and diskmag sources for inclusion. I have also officially took over the maintenance of the Atari FTP list from Hallvard Tangeraas of which there have been a couple of updates.

New items in this document since the last copy will be marked with **, updates will be marked with a U. All new items are also listed below according to the date they were added.

This update is special as it contains the updates from the last two months rather than one month as is usual for the updates. This is a one off however and has happened due to the fact that my Web pages had to close down in March and a new site had to be found before the service was resumed. A new site was successfully found but I felt there were insufficient updates that month because of these events and therefore this update is larger containing both months.

Please make a note of the sites new address and update any links or bookmarks to the Atari pages to the new address. Thank you!

The new items this month are:

==========

What are the Atari Web pages?
~~~~ ~~~ ~~~ ~~~~~ ~~~ ~~~~~

These are a collection of pages covering all formats of the Atari. In these pages may be found the latest news, reviews, software for downloading, and various other information and links to other places of interest to Atari users.

I have tried to make the structure of these pages easy to follow and as intuitive as possible but there is still a lot of work to be done yet.

==========

How do I access them and what is the Web?
~~~ ~~ ~ ~~~~~~ ~~~~ ~~~ ~~~~ ~~ ~~~ ~~~

First of all I shall look at what the Web is or to use its full name the World Wide Web. The Web is new way of accessing the Internet, unlike previous methods where you were required to enter commands into the program you were using the Web uses a more user driven method of getting around the Internet. This method is much more graphical than former methods and as such is much easier to get to grips with.

When using a Web browser (the name given to a program used to access Web pages) the control method usually consists of a point and click operation. A Web page will consist of text and graphics which are sometimes highlighted in some way to indicate that they are selectable and link to more information or a particular piece of data.

Such a link is reffered to as a hyperlink. In fact the whole system is a variation on hypertext and uses a script to create each page. Each script is written to a HTML (HyperText Markup Language) standard which contains the main body of text in the page and a few command tags for the browser as to how to format the page and what to do with links, etc.

Web pages may contain text, graphics, sounds, and animations, although the later two are normally supported through external software. It is also possible using the Web to gain access to newsgroups, ftp sites, and gopher services all through the one program. As such this makes this a very powerful tool for Internet access, and coupled with its ease of use this has suddenly became the big thing in the recent Internet explosion into the media.

Browsers can handle all properly written HTML scripts but may vary in operation when scripts are incorrect or contain mistakes. Browsers can be divided into to distinct types, graphical and text only. Popular graphical browsers include NCSA's Mosaic and the recent new browser NetScape. On the text side Lynx is the most popular textual browser (NOTE: text browsers don't show any form of graphics).

To access the Web you must either use one of the above mentioned browsers on a machine such as a Sun, PC or Mactintosh, or if you want to access it via your

Atari you will need a copy of the Lynx browser as unfortunately there aren't any graphical browsers YET for the Atari.

==========

U Where do I find the Atari Web page?
  ~~~~~ ~~ ~ ~~~~ ~~~ ~~~~~ ~~~ ~~~~

>From your Web browser choose to open URL and enter the following address:

         http://www.mcc.ac.uk/~dlms/atari.html

If you can store a hotlist of addresses or something similar on your browser then it may be worth including this address for quick access in the future.

Once you've done that you should see my main page so I hope you enjoy it, and don't forget to write with your thoughts.

(*NOTE*: This is the new site for the Atari Web pages, take note of it!)

==========

U What you will find in the Web pages every month.
  ~~~~ ~~~ ~~~~ ~~~~ ~~ ~~~ ~~~ ~~~~~ ~~~~~ ~~~~~

>From the main menu you have several links available to you, some under miscellaneous and others specific to a particular machine, or collection of machines. It is now possible to mail me directly from the Web pages, special thanks also to Frank Charlton for the new Atari Logo. First I will look at what will be in the Miscellaneous section.

             ****

Atari Related links, Documents, FAQ's and Newsletters
~~~~~ ~~~~~~~ ~~~~~ ~~~~~~~~~ ~~~~~ ~~~ ~~~~~~~~~~

First in the list are "Atari Related Links", these links are to other sources of Atari information or data (such as files, etc.).

There is a link to many of the major Atari holding FTP sites on the Internet. Links to several Web pages by different people on the Atari. This will grow as worthwhile sites come up. At the moment you can visit:

- HENSA to download Atari files (Moderated by Denesh Bhabuta)
- ZFC's Atari Pages by Annius V. Groenink. This has links to various Atari related places, along with talk of his own work on Edith and his new Drive U Project. Annius is also working on a version of the Mosaic browser for the Atari and the best of luck goes to him on that.
- Christer Gustavsson's Atari Gem Programmers Page. Very useful information for programmers grapling with Gem and the operating system. Also offers help via his questions answers page. Some links can be found to Atari related places.
- CAIN Atari Pages. CAIN is the Central Atari Information Network and they create a newsletter which is updately monthly on all things new to do with the
~~~~~

  Atari. There are also links available here.
- Martin Maisey's Atari Pages. Contains information (downloadable) on programs
  written by himself for the Atari. Again there are links to other Atari
  places.
- Toad Computers Pages. Stockiest and retailer of many Atari goods.
- ST Format Pages. Information and previews of ST Format issues.
**Volker Burggraf Atari Pages (German).
**Desert Star Software Home Page.
**ST Assembler Page
**BSM's Home Page
**ST Beer Mat Page
**The Organised Chaos Licenseware Home Page
**Index of /~jschlich/Jaguar/
**Lynx Pages
**Atari Lynx Page
**Atari Page by Frank Post (Partially German, partially English)
**MiNTOS Distribution and Information Page
**Julian's Atari Page
**Atari Ghostscript
**Atari Page by Robert Krenn
**Simon Gornall's Atari Pages
**Ben Halls Page (KSculpt + Calamus Information)
**"Data Uncertain" Software
**Kay's Home (MintNet)
**CNAM Atari Pages
**EMAGIC Users Page (Covers Atari)
**Helmut's Project contains Atari Links (English and German)
**Eero Tamminen's Atari Pages
**Atari Programmers Page
**The Vulcans Home Page
**Atari Users List
**Impulse Home Page (Demo Crew)
**NPG Home Page (Demo Crew)
**Atari Page by Dirk Klemmt
**Steve's Atari WWW Pages

**8 Bit Atari Page by Ivo van Poorten
**Atari Jaguar Homepage by Christian Svensson (very good and kept up to date)
**Jaguar directory

Documents
~~~~~~~~~

Useful documents will appear in here. At the moment there is:

U Atari FTP List by Mark Stephen Smith (essential for the latest news on who
~~~~~~~~~

  provides Atari FTP sites).
- Atari TOS Desktop Survival Kit by Thomas J Hopper. An essential guide to
  getting the most out of your DESKTOP.INF and NEWSDESK.INF files.
- Recommended list of software for the Atari by Denesh Bhabuta. List compiled
  by Denesh for me of his best software for the Atari (updates coming soon).
  Mostly PD and Shareware, this list contains links to download most of the
  software mentioned.
- Information on picture formats by Dave Bagget. Lots of information on the
  format of different picture files for the Atari.
**Information on Viruses.

FAQ's (Frequently Asked Questions)
~~~~~ ~~~~~~~~~~ ~~~~~ ~~~~~~~~~

Useful FAQ's will appear here. At the moment there is:

- Atari ST SLIP FAQ. This is a guide to connecting your Atari to a network.
  All you want to know about networks and the Atari.
- Atari CD FAQ. Information on getting and using CD's on the Atari. Regular
  updates to this can be found in my pages.
- GDOS FAQ by Gerd Castan. Got a question on GDOS then this is the place to
  look.
- MiNTNet FAQ by Christer Gustavsson. Everything you wanted to know about
  MiNTNet.
- AtariNOS FAQ by Frank Charlton. Answered questions and information on NOS.

Newsletters
~~~~~~~~~~~

Although there may be more to come the following newsletters are updated
promptly as I receive them. These have been re-organised to make it easier to
keep track of. At the moment there is:

U CAIN Newsletter containing the latest Atari news.
U HENSA Newsletter containing the latest updates to the HENSA Atari archive.
U AEO Newsletter containing the latest Atari news.

Newsgroups
~~~~~~~~~~

Atari related newsgroups. Send updates. The currently supported news are:

comp.binaries.atari.st
comp.sys.atari.advocacy
comp.sys.atari.announce
comp.sys.atari.st
comp.sys.atari.st.tech
comp.sys.atari.programmer
rec.games.video.atari
alt.games.lynx
~~~~~~~~~~

****

U Questions and Answers
~~~~~~~~~ ~~~ ~~~~~~~

Submit your questions to here and get them included in this page. Answers are open to anyone who has something valid to say, and help is provided to me on Programming and Music questions by several knowledgeable sources. Please support this section, only by your interaction and questions will it survive. All answers are included in this page for anyone else with the same question and answers are also sent back to the person who submitted the question for those without Web access.

If you feel you have an expertise in a particular area concerning the Atari and would be willing to answer questions on that area when and if I submitted them to you, then please let me know and you can join the team. Programming and Music are fairly well covered and I can cover Graphics programs, help with Technical questions would be appreciated.

****

Reviews
~~~~~~~

Here I hope to include reviews of Atari products both new an old. So far I have the following reviews:

- Kobold review by Andy Curtis (ST Format)
- Flash 2 review by Frank Charlton (ST Format)
- Edith Professional review by Frank Charlton (ST Format)
- MagiC review by Andy Curtis (ST Format)
- Stello v2 review by Mark Stephen Smith (Myself)
- Sportster Modem review by Frank Charlton (ST Format)
- Storm Tracker review by Andy Curtis (ST Format)
- Connect review by Frank Charlton (ST Format)
- Zero 5 review by Frank Charlton (ST Format)
- MIDI Grid review by Andy Curtis (ST Format)

There are several reviews on the way by the above mentioned people aswell as some by myself. This section is now growing well now and Nick Peers from ST format recently expressed his interest in writing some reviews also.

Again if you feel you would like to submit reviews for inclusion then please write to me. Please note these pages don't include Lynx and Jaguar Reviews, as they are contained within their own pages.

****

News and Announcements Pages
~~~~ ~~~ ~~~~~~~~~~~~ ~~~~~

Latest Atari news, and announcements from the Atari World. Currently contains the following:
~~~~

**Nova Graphics Board Announcement
**Sozobon C Announcment
**FTP site Announcment
**Fried Bits Eastern Coding Convention 3 Announcement
**Portfolio Club Announcement
**Towers II release Announcement
- Universal Virus Killer Book Announcement

****

Updates and Information on these Web Pages
~~~~~~~ ~~~ ~~~~~~~~~~ ~~ ~~~~~ ~~~ ~~~~~

All updates and news on the Atari Web pages goes in here. Previews of whats to come soon are included and new items or updates to the pages are listed according to date with the most recent being first. Most updates contain links to the new material for instant access.

Other things to be found in here are the number of accesses to the Atari pages. At the moment this is not supported.

****

This now concludes the Miscellaneous section. Now onto the Other Pages. These pages are specific to a particular machine, or collection of machines. These are going to go through some major changes and you can expect a fair number of changes to be made to these in the next month or so.

****

Falcon Page
~~~~~~ ~~~~

This will contain information and files relevant to the Atari Falcon, currently this page is divided into the following areas:

News and Previews
~~~~ ~~~ ~~~~~~~~

In here expect to see any news or previews that come my way, whether they be small descriptions or full features with pictures. At the moment there is:

- Pinball Dreams and Llama Zap News.
- Apex News. This contains some information I got on Apex Media for the Falcon when I spoke to Douglas Little on the phone a few weeks back. Not very detailed unfortunately, but I'm waiting on my copy of Apex to give a full review so expect that to be rectified soon.
- Dextrous News. Small description of some of the features of Dextrous with a picture. Only at an early stage of development, if I hear more it will go in here.
- Towers II : Plight of the Stargazer. Pictures and description of this great looking Falcon only sequel to Towers. Expect the demo soon.
~~~~

- Towers II : Plight of the Stargazer Update! The latest news on developments.
U Newsletters from HENSA on Falcon section of archive.

Misc
~~~~

Miscellaneous information on the Falcon, including:

U Falcon Demo FAQ. List of Demos for the Falcon, including some form of
  information on each.
- Compatibility list of games with Falcon.
- Compatibility list of applications with Falcon.
- Falcon Specifications and Information compiled by Rod McCall.

New Software
~~~ ~~~~~~~~

The latest Falcon/enhanced software available for download. Major revisions to
be done with updates here. All files now list there size so you can see how large
they are before downloading. At the moment the following software is
included, with more to come:

**Apex Media Demo (Demo version of the animation and art package for the Falcon)
**Towers II (Shareware game)
- Super Bomber Man (freeware)
- Play MPEG v0.70 by M.D.Griffths (shareware)
U Speed of Light v3.8 (shareware picture viewer)
- Scape a planetary landsacpe generator.
- Digital Tracker demo of commercial version.
- Obsession 1 level demo.
U FOG issue 8 diskmagazine for Falcon.

Other software worth having
~~~~~ ~~~~~~~~ ~~~~~ ~~~~~~

Software worth using on the Falcon.

- Backward v2.52. For compatibility with the ST. Please send any versions
  which are newer than this.
- MultiBlow. Configurable overscan utility.
- Starball. Excellent pinball game (Falcon enhanced).
- Berzerk. Excellent version of Berzerk (Faster on Falcon).
- FOG issue 7 diskmagazine for Falcon.
- FOG issue 6 diskmagazine for Falcon.

               ****

Atari ST/STE/TT/Mega STE Page
~~~~~ ~~~~~~~~~~~~~~~~~ ~~~~

This will contain information and files relevant to all the above mentioned Atari formats, currently this page is divided into the following areas:

News
~~~~

In here expect to see any news or previews that come my way, whether they are small descriptions or full features with pictures. At the moment there is:

U Newsletters from HENSA on TOS section of archive.

New Software
~~~ ~~~~~~~~

The latest (most recent versions) software available for download. Major revisions to be done with updates. All files now list there size so you can see how large they are before downloading. At the moment the following software is included, with lots more to come:

U Speed of Light v3.8 (shareware picture viewer).
- ST Zip v2.6. Latest version of ST Zip.
- Obsession demo. 1 level of this great pinball game.

Other Software worth having
~~~~~ ~~~~~~~~ ~~~~~ ~~~~~~

Software worth having on the Atari.

- Utopus. Two player shootem' up (STE only).
- Ozone. Good platform/puzzler.
- Starball. Excellent pinball game.
- Berzerk. Excellent version of Berzerk.

****

Lynx Page
~~~~ ~~~~

All the latest news and reviews on the lynx, along with cheats, etc. This page is divided in to the following areas:

News
~~~~

News on the Lynx and related material. At the moment there is:

- Lynx Summer Steal Deal Extended to the Fall. News of price reductions for a limited period.

Reviews
~~~~

~~~~~~~

Reviews for just about every Lynx game ever released will appear in here. All reviews are by Robert Jung. At the moment the following reviews are included:

APB	Awesome Golf	Baseball Heroes
Batman Returns	Basket Brawl	Bill and Ted's
BlockOut	BattleWheels	Blue Lightning
California Games	Checkered Flag	Chip's Challenge
Crystal Mines II	Dino Olympics	Dirty Larry:Renegade Cop
Dracula the Undead	Double Dragon	Desert Strike
Electro Cop	European Soccer Chal.	Ultimate Chess Chal.
Gauntlet:3rd Encounter	Gordo 106	Hard Driven'
Hockey	Hydra	Ishido : Way of Stones
Jimmy Conners' Tennis	Joust	Klax
Kungfood	Lemmings	Lynx Casino
Malibu Bikini Volleyball		Ms.Pac-Man
NFL Football		Ninja Gaiden
Ninja Gaiden III : The Ancient Shop of Doom		

Other Lynx Stuff
~~~~~ ~~~~ ~~~~~

Other items of interest to Lynx owners. At the moment there is the following:

U Lynx FAQ
- Lynx Tips and Tricks

New Software Anouncement
~~~ ~~~~~~~~ ~~~~~~~~~~

Currently empty.

****

Jaguar Page
~~~~~~ ~~~~

All the latest news and reviews on the lynx, along with cheats, etc. This page is divided in to the following areas:

News and Previews
~~~~ ~~~ ~~~~~~~~

All the latest news and preview information I can find related to the Jaguar.

**ECTS News
**Hyper Image page linked to (Makers of Jaguar game Hover Hunter).
- Jaguar CD Specifications
~~~~

- Rebellion Development News
- Sinister Developments News
- Sensible Soccer News
U Coming Soon!
- Hand Made Software News

Reviews
~~~~~~~

A collection of reviews from different sources, hopefully I will be contributing more to this section myself. This page has been re-formatted thanks to Holger Kipp. Reviews so far include:

```
     Aliens vs Predator - by Eric S.Boltz
     Aliens vs Predator - by Robert Jung
     Brutal Sports Football  - by Randy
**   Bubsy Bobcat (in
     Fractured Furry Tales)  - by Robert Jung
     Checkered Flag          - by Robert Jung
**   Cannon Fodder      - by Holger Kipp
     Cybermorph         - by Robert Jung
**   Doom          - by Robert Jung
     Dragon: The Bruce Lee
     Story              - by ?????
**   Iron Soldier       - by Robert Jung
**   Iron Soldier       - by Holger Kipp
     Raiden             - by Robert Jung
**   Syndicate     - by Holger Kipp
     Tempest 2000       - by Robert Jung
**   Theme Park         - by Holger Kipp
**   Theme Park         - by Robert Jung
     Trevor McFur in Cresent
     Galaxy             - Jer Howitz
**   Val d'Isere Skiing and
     Snowboarding       - by Robert Jung
     Wolfenstein 3D          - by Robert Jung
**   Wolfenstein 3D          - by ?????
```

There are many more reviews to come.

Other Jaguar Stuff
~~~~~ ~~~~~~ ~~~~~

Miscellaneous information on the Jaguar. Information included presently is:

U Jaguar FAQ
- Raiden Tips
- Jaguar Game Cheats
- Kasumi Ninja FAQ
- Ultra Vortex FAQ update for Jaguar
**50/60 Hz, games adjusting to resolutions list

**Jaguar Game Cheats
**More Raiden Tips
**Kasumi Ninja Moves List

Other Jaguar Pages
~~~~~ ~~~~~~ ~~~~~

Other pages specific to the Jaguar included in here. Currently there is:

- Atari Jaguar Homepage by Christian Svensson

There are others that will be included, some containing more recent news, but the one above is the most organised and intuitive one I've came across.

****

8 Bit Atari Page by Ivo van Poorten
~ ~~~ ~~~~~ ~~~~ ~~ ~~~ ~~~ ~~~~~~~

Not maintained by me these pages cover the 8 bit formats of Atari machines and are very comprehensive. Nearly everything you could hope to find is contained within these pages.

****

What to expect in the future
~~~~ ~~ ~~~~~~ ~~ ~~~ ~~~~~~

Some structural changes are likely to appear in the next months. I have introduced an announcements page where you can tell the World of anything you have to announce. Please send news of updates to your programs, Atari stuff for sale, and any other Atari announcements here (NOTE : Commercial companies should send information on products to be included in here and in the news sections).

Also coming soon will be a monthly editorial. In this I will try and sum up the month past and to give my opinions on how I saw things for Atari at that time. Hopefully I will be able to look back over many good developments in my pages and summarise them as they happened.

There is an outside possibility of starting a programmers and/or MIDI section in these pages but this is as yet undecided. I will judge whether or not to do this based on the kind of response I have. I do not want to repeat any of the good work done in these fields however by other Web page writers such as Christer Gustavsson (Where is the response for these pages?)

More support is needed for the questions and answers pages, although initially successfull people just stopped posting their questions. Although the odd one is still coming and answers are still forthcoming. Please support this, it is of benefit to anyone who uses it.

The Jaguar section should have a lot more news, pictures and reviews in the

future. I have tracked down a fair bit of news and am in contact with a few companies now and hope to get news from them on there products.

Both the ST and Falcon sections should contain much more news in the future, along with more of the best PD/Shareware, and PD/Shareware reviews. I should have several demos hopefully in the near future for games coming out on these formats.

The Lynx section is to continue to get reviews and I will update the news as and when I get it. Sorry about the lack of updates recently, more to come.

Expect more links to Atari related pages in the future. There will be more newsletters, documents, updates to the FAQ's.

Expect further reviews from Andy and Frank, along with myself (watch out for the Apex Media review). Hopefully I can include more screenshots, and do a few program tutorials. Nick Peers of ST Format and Holger Kipp have offered to support these pages with contributions in the future.

Please write with your ideas, critisms, comments, submissions (software, news, reviews, questions, etc), to me and don't forget that I am now the official maintainer of the Atari FTP list originally by Hallvard Tangeraas. All updates to this list should now be sent to me.

Thank you and see you with the updates to these pages next month!

Substation

Storyline
In 1996, Mitushi Industries, a small Japanese industrial group, is researching alternative energy sources. What they come up with is so unbelievable it might just be possible.

Three years later, Mitushi's 'IEE' (Inside Earth Energy) base Substation at 2500 metres below sea-level provides Japan's two largest cities with all their power needs.

June 6th 2004, 11.15am: Contact with Substation is lost. In panic, Mitushi's Board of Directors pay the U.S. government an unknown amount of money to lease an 'M.E.M' (Multi-Environment Marine) to find out what has happened.

Visuals
SubStation is an incredible action game in which the player moves freely in an extremelyfast real-time gouraud-shaded 3D world. The screen refresh rate for the 3D world alone is an amazing 25fps (frames per second) in a resolution of 320*160 using 3 bitplanes.

The 3D system is a state of the art development solution written by Mikael Emtinger and Oskar Burman, and will make Substation one of the most technically advanced games ever to appear on the STE or Falcon.

Gameplay
Substation runs on any Atari STE 1Mb or Falcon with RGB or VGA monitor. Your cha
racter is controlled either using the keyboard or Jaguar PowerPad. You can run, walk, strafe, pick up items, choose between a great number of weapons, open doors, access elevators between the different sublevels and even strafe, rotate, run and fire your gun at the same time, giving you total control of your actions!

DD Audio
To further increase the horrifying atmosphere in Substation, Tord Jansson (responsible for the amazing sound routines in Obsession) developed a special sound effect system called DD Audio (Distance & Direction) which enables you to hear where monsters are lurking. The combined effect of foggy colours and pit-pat of tiny monster feet from the far left will give you nightmares....

MIDI-Link
By utilizing the link capabilities of Substation, you can play against other humans in special combat levels using the MIDI ports. Up to four players can take part in a game, either by forming two teams, or every man for himself... In MIDI-Link Mode you gain credits for which you can buy extra ammo, first-aid kits, food or new weaponry.

!!This list is to discuss everything on or about Atari Graphics and related!!

==========

Information from December 1993 about LEXICOR-LIST

%*%*%*

Of course, Lexicor hard & software products will be discussed, as well as other hard & soft products for Atari. It matter's not that a Lexicor has opened this general mailing list, as the other members of the graphics list are there to shift and talk to whatever field they like (on and around Atari Graphics).

By Atari Hardware I mean from the old 520 STFM line, 1040 STE upto the MEGA STE's, TT'030's and naturally Falcon'030's. I will try to scoop up the newest information I can get, as well as I will be relying a little on what you might dig up, and discuss about the latest Atari Events concerning graphics around the Atari World.

But Atari Graphics goes also into the realms of general graphics question and answer painting tools, about discussions of rendering and raytracing techniques, and consequently about the production of faster machines (much needed for fast raytracing) such as the TT-Clone from GeSOFT called the "Eagle" or the Medusa both from Europe which have 50 MHZ 68030 and/or even 68040.

Atari Graphics is also about Desktop Video, Genlocking, Desktop Publishing, 2D or 3D Animation, rendering, raytracing, pixel painting, drafting, there are so many of them...I could never list them all.

We might even be discussing the potential of the Jaguar as a future external graphics tool..controlled via th Falcon as the ultimate low-cost graphics workstation! (Optimist I am!) Future plans..and ideas are welcomed!

I hope you enjoy this new experimental mailing list.

Have fun!!

** ANNOUNCE ** SHOESTRING COMPUTERS ** ANNOUNCE ** SHOESTRING COMPTUERS **

History: Allow me to introduce myself. My name is Domingo B. Alvear, but most people just call me "Dom". I have been using Atari computers since 1980. My first computer was the venerable Atari 800 with 48K, an 810 disk drive, and a 410 tape drive. Since then I've owned and upgraded various 400's, 800XL's, etc. I upgraded to a 1040ST in 1986. I currently own a 520ST, a Stacy, and a Mega ST. As you can see, Atari computers are my passion. I find that they still offer the same ease of use today as they did when the first ST rolled off the line.

Purpose: I believe that many Atari users have the same love for Atari computers as I do. Even though Atari Corporation has gone back to its roots, that doesn't mean our computers are now expensive doorstops. I use my computer every day to write letters, balance my checkbook, e-mail my friends, access the internet, etc. I know am I not alone. So what does Shoestring Computers have to do with all of this? Since we all can't afford to go and buy a new computer, upgrading is the only option. Shoestring Computers is here to accomplish that goal. If you are looking to upgrade your computer whether in mass-storage, RAM upgrades, CD-ROM drives, or acceleration, Shoestring Computers hopes to fill your need with the best products available at the best price with fast and friendly service.

Product: Currently Shoestring Computers has available SyQuest 105MB removables, NEC CD-ROM drives, and Quantum 540MB HD's. ICD's AdSpeed and Fast Technologies' T-25 can be installed to give your computer a speed boost. Various RAM upgrade paths are being investigated and will be available as well.

Growth: As a small, part-time business, Shoestring Computers has limited resources. With your support, I hope to build Shoestring Computers into a place where Atari owners can go to keep their machines running well into the future. Products will be added as the demand deems necessary, and new products specific to the

Atari line are already in the beginning stages of development.

Contact: Shoestring Computers can be contacted through e-mail at the addresses listed below. In the coming months, a page on the World Wide Web will become available. Please send a short e-mail message if you would like to get a monthly online newsletter with prices, specials, and new products.

Closing: Thank you for taking the time to read this announcement. Your Atari Computer is only as useful as you make it. I would like to help in whatever way I can to insure that your investment remains valuable to you.

** SURVEY ** SHOESTRING COMPUTERS ** SURVEY ** SHOESTRING COMPUTERS **

Here is a short survey to help me better determine the needs of current
Atari users. I will use your answers to help point Shoestring Computers
in the right direction. If there is anything that you feel I have
overlooked, feel free to make additional comments at the end.

1) Which Atari ST series computer(s) do you have? If you have more than
one please list them all. Also include your TOS version and RAM.

2) What is the primary use of your ST?

3) Secondary?

4) Which monitor(s) do you own?

5) Do you have any hardware upgrades installed in your computer(s)?

6) Do you own a hard drive? Please list the host adapter and the size of
the drive as well as the driver software version you are using.

7) Do you own a modem? Please list the manufacturer as well as your primary

telecommunications software. (If you don't own a modem, how did you get this survey? <smirk>)

8) Do you own a printer? Please list the manufacturer. Also list the RAM size if it is a laser printer.

9) Do you own any other peripherals?

A) Please name the last hardware purchase you made.

B) Please name your three most wanted hardware items, including upgrades (available OR unavailable).

C) Please name your top three software applications (no games).

D) Please name the last three software purchases you made (shareware counts).

E) Please name your three most wanted software items (available OR unavailable).

Thank you for taking the time to answer this survey. If you have any other comments or suggestions, please do not hesitate to include them. I hope to be able to serve you in the best possible way. Please e-mail your responses to one of the addresses below.

I just wanted to announce that the Atari Web pages now has a new section included. This section covers tips, cheats, and solutions for games on all Atari formats. Currently the cheats are split into Computer, Jaguar and Lynx catergories, but if I get any cheats for other Atari consoles, or for the 8 Bit Atari I may divide the sections further.

This is a new addition to my pages and is fairly empty. Over the next couple of weeks I've got several additions to make. If however you have any tips, cheats, or solutions for games on any Atari format please contact me with them and try to make it clear what system the cheats are for.

I hope you all enjoy this section and I look forward to your response. Bye!

tel: +42 2 99 61 894

INTERNET:
sedlakj@pedf.cuni.cz

```
************************************
* What is new for Portfolio?
```

HARDWARE:

- PortWalk - tape recorder interface
Enables to save and load files onto any tape recorder cassettes. It is very handy, and unlike 8-bit era of "tape recording", this interface is very reliable thanks to error detecting code.

- 128 KB RAM CARD
Atari cards are very expansive - the RAM card we developed uses one Low-Low Power chip and CR 2025 lithium battery (plus some diodes). The assumed life expectancy of the battery at least 2 years.

- 25 pin parallel interface
As there are big problems with Atari dealers in Europe, we decided to produce 25 pin Centronics (Parallel) Interface. It is a bit smaller than original interface and consumes twice less energy.

- FolioDrive - 3,5" floppy disk unit with included parallel interface and battery pack
It was specially developed for Portfolio and enables to read and write 1.44 MB PC diskettes. No cables more needed. You can run files directly from the diskette.

SOFTWARE:

* In February we have finished a graphic version of Portfolio BIOS and DOS.
This means that Portfolio can display any character using direct access to the LCD driver. Thus Portfolio can be used in countries with extended alphabet (e.g. in Czech Republic). We used similar routines to those used in PGC and PGX format. The resident program runs even under ROM applications.

* There is a PC program that enables to work with Portfolio .TXT and .ADR files in the same way as on PF.

OTHERS:

* Genuine leather case with a battery pocket
Protects Portfolio against dust and other "evils". One built-in pocket for identity card or passport, another pocket for 3 AA batteries. Full handwork.

****
* Things under development:

- Upgrade your PF to 512 KB RAM!!
We are going to upgrade Portfolios to 512 KB of system RAM

- 60*10 character display
Another aim of ours is to make Portfolio display 60*8 characters using 8*4 pixel fonts. This will mean that user will see more of the whole screen if running PC files.

We hope to implement other graphic features:
        * blinking
        * inversion
Portfolio thus will become more PC alike.

There were already some attempts to make soft running in 60*8 mode, but the new driver will be working constantly with all files.

****
* What we want:

- We are looking for Portfolio users in POLAND, HUNGARY, RUSSIA.
We want to offer them the new BIOS with their characters.

- We are looking for any Portfolio activities in the world.

- We plan to develop following peripherals, provided there are enough Portfolio users to be interested in them and to buy them:

* new version of FolioDrive 3.5 inch FDD unit
  with parallel interface, battery pack
  + internal 128 KB memory chip to serve as CASH and B: disk.

* FAX-MODEM module to send and receive fax, modem messages every where in the world

* cordless, radio-wave based interface to connect PF to PC

* 512 KB or 768 KB SRAM module to serve as a data storage medium

* Interface for PCMCIA cards

****
* What we are looking for:

- any PF fans that want to join us

- any PF users who are able to develop new soft

- information about: Re:Port, Portfolio Connection Newsletter, etc.

- any kind of emotional, mental and other support

- any dealer that is willing to go on with
  PF stuff and wants to sell our products

****
* How to get the described things

We hope that TOAD COMPUTERS will distribute
all our products in the USA and Canada.

Please support our efforts in promoting Portfolio
and send them your request for PF and products

Their e-mail: toad@charm.net

Otherwise send e-mail to us:

sedlakj@pedf.cuni.cz

****
Special greetings to:

Don Messerli   - for his soft and graphics
BJ Gleason   - for PBASIC and tons of other things
S. Spoelstra   - for his BASIC, and others
Tomas Dusek   - Go on developing the hardware!
Martin & Milan Hrdlicka - the authors of new graphic BIOS

     THE KEY TO ORGANIZING YOUR HEALTH RECORDS

"If you care about yourself and your children, you will do everything you can to know your family's medical history. It can save your life, and the lives of those who are dear to you." -- Dr. Aubry Milunsky, Director, Boston University's Center for Human Genetics (Life Magazine, March, 1995).

Your Lifetime Health Planner offers the simplest, most effective way to take charge of your health. Enter important facts about your health history, keep a record of the names of medications and their effects, document each doctor visit and diagnosis. You will have the information you need, and in the event of an emergency, so will your family.

Your Lifetime Health Planner, 198 pages in a compact, loose-leaf binder, contains a variety of sections which include "Doctor Visits," "Medications," "Family Health History," and "Doctors and Specialists." The Planner is a must for the busy executive who needs to stay organized, for seniors who are receiving care and for newborns who need a record of their health care.

Parents Magazine recommended the Planner to its readers (April, 1994) and MCI called it "a useful resource in managing your personal health records." Margie Smotherman, Coordinator, Employee Health and Wellness, Blue Shield/Blue Cross of Iowa, said: "The employees felt that these (Planners) were great tools to not only record their pertinent numbers, but to plan for doctor's visits."

To get your copy, send a check or money order for $19.95 (plus shipping and handling) to :

Guidelines to posting to comp.sys.atari.announce

if you have any questions or comments/suggestions
please respond to myself or reply.

This file should assist users who wish to post to comp.sys.atari.announce
and are not exactly sure if it will be approved:

When posting to comp.sys.atari.announce please make sure of the following:
* post about atari computer relevant topics
* please include an explanation to what the package/machine is in the post
* the post should be at least 10 lines long (message content)
* it should be informative

* What kinds of posts will not be approved?
Any post that is not relevant to atari computers (8-bit, 16bit/clones) will
most likely not be approved.

Details are in the charter, in general posts that sound like "there are some
news, please contact me" without any information on the product in question
will be rejected. Posts that appear to have a lot of spelling mistakes will
most likely also be rejected (such as fairly obvious grammer and spelling
errors). Posts are expected to be in english, if they are in another language
then a translation would be nice, its hard to approve anything that one can't
read.

*Can I post forsale posts?
Forsale hardware posts are generally not approved unless they come from a
company/developer or dealer who wishes to announce new pricing for product.

Comp.sys.atari.announce is not atari.marketplace (doesn't exist however).

* Justification/Charter
Please read the RFD, this should clarify a lot of questions, if you have any more questions please email me (ysiu@lexicor.com)

Original Request for Discussion: comp.sys.atari.announce

by: Yat Siu (Lexicor@world.std.com)

Group name: comp.sys.atari.announce
Status: moderated (Lexicor@world.std.com)
Distribution: world-wide
Summary: a newsgroup for the product announcement of atari computer
          hard and software or related (eg. clones).

Justification:

     There are currently comp.sys.atari.st, comp.sys.atari.st.tech, comp.sys.atari.8bit and comp.sys.atari.advocacy, the first three groups are discussion forums for their (specific) related hard and software. Product announcements in these discussion forums of new releases by either commercial, shareware groups can often be considered a service but not encouraged. The atari computer market is not very widely distributed and it is getting increasingly harder to know more about new products.

     To begin with a product announcement group would encourage the people to announce their new products for the benefit of all atari computer users. It will also allow the reader to focus for a new newsgroup only for product announcements or press releases and will also make the reader more aware of his/her options.

Charter:

     The proposed group will provide a forum for the announcement and release of new atari related products:

* atari computer hard and soft
* commercial as well as shareware or related
* announcement from individual authors, companies or distributors
* press releases

NOTE

This RFD is being issued in concordance with the guidelines set in the "How to create a new usenet newsgroup" FAQ regularly posted to news.announce.newgroups. Please refer to this article if you have any questions about the newsgroup creation.

Unless the discussion indicated a need to resubmit a new RFD, the CFV will be posted approximately three to four weeks after the posting of this RFD.

This RFD was (cross)-posted to the following groups:
news.announce.newgroups, news.groups, comp.sys.atari.st, comp.sys.atari.8bit

Atari Web Pages Latest News

Version 1.0

Date 6/6/95

by

Mark Stephen Smith

6th Update

==========

Foreword

Hello and welcome to the news item on the Atari Web pages. This document will describe the Atari Web pages as provided by Mark Stephen Smith and will inlcude a list of the latest updates for the month. Each month I hope to update this text with the very latest additions and news on the Atari Web pages.

Hopefully these pages will provide an invaluable service to their users, but they are still at an early stage and developing all the time. As such any

feedback and support you may have for these pages is more than welcome, it is infact encouraged. The more input I get from its users the better, as then I will know what is good and bad about these pages and can change them approproately in the hope of increasing their value to their readers.

Now on with the show.

==========

News and Changes
~~~~ ~~~ ~~~~~~~

Well since the original description a lot has happened. I'm now involved in several projects, and submit work to several Internet and diskmag sources for inclusion. I have also officially took over the maintenance of the Atari FTP list from Hallvard Tangeraas of which there have been a couple of updates.

New items in this document since the last copy will be marked with **, updates will be marked with a U. All new items are also listed below according to the date they were added.

I apologise for the lateness of this update but my workload has been too large to take the time until now to do this. Please make a note of the sites new address and update any links or bookmarks to the Atari pages to the new address. Thank you!

The new items this month are:

2/6/95 -- Two Reviews of Checkered Flag added for the Jaguar
2/6/95 -- CAIN Newsletter Volume 2. No.4
2/6/95 -- HENSA Atari TOS Newsletter Volume 8. No.9. in HTML format
2/6/95 -- HENSA Atari TOS Newsletter Volume 8. No.9
23/5/95 -- Games Tips, Cheats and Solutions section added
23/5/95 -- Robinsons Requiems Tips
23/5/95 -- Iron Soldier All Weapons and Levels Available Cheat
23/5/95 -- Iron Soldier Unlimited Ammo Cheat
23/5/95 -- Comming Soon for the Jaguar Updated!
22/5/95 -- AEO Newsletter for Jaguar reporting on the E3 show in ZIP and text format
22/5/95 -- Falcon news section format altered so it links to Falcon Hensa newsletters rather than duplicating them here.
22/5/95 -- ST news section format altered so it links to TOS Hensa newsletters rather than duplicating them here.
22/5/95 -- Questions and Answers Q.3 answered, and Q.16 and Q.17 added
10/5/95 -- HENSA Atari TOS Newsletter Volume 8. No.8. update
10/5/95 -- Rod McCall's Falcon Pages link added
10/5/95 -- Bobby Tribble's Atari Link Directory Pages link added
10/5/95 -- Stuart Denman's (Author of Speed of Light) Pages link added
10/5/85 -- Promotional Video for Jaguar
10/5/95 -- Baldies CD Jaguar News
10/5/95 -- The Nordvic Atari Show 1995 Announcement
10/5/95 -- Fried Bits Coding Covention III Results
10/5/95 -- Freedom Fileselector Announcement
~~~~

10/5/95 -- Substation News
10/5/95 -- Secret Level Codes for Hover Strike on the Jaguar
9/5/95 -- More Hover Strike reviews and comments for the Jaguar
9/5/95 -- Dragon : The Bruce Lee Story Review for the Jaguar
9/5/95 -- Small trick for Hover Strike on the Jaguar
9/5/95 -- Zool 2 cheat for the Jaguar
9/5/95 -- Jaguar FAQ update
9/5/95 -- Lynx FAQ update
4/5/95 -- Several Hover Strike reviews and comments for the Jaguar
3/5/95 -- Falcon Owners List by rod McCall
3/5/95 -- Falcon Developers List by Rod McCall
3/5/95 -- Falcon BBS List
2/5/95 -- 3 Demos each under 96K from the Fried Bits III Convention
2/5/95 -- Towers II: The Plight of the Stargazer Review by Mark Stephen Smith

==========

What are the Atari Web pages?
~~~~ ~~~ ~~~ ~~~~~ ~~~ ~~~~~

These are a collection of pages covering all formats of the Atari. In these pages may be found the latest news, reviews, software for downloading, and various other information and links to other places of interest to Atari users.

I have tried to make the structure of these pages easy to follow and as intuitive as possible but there is still a lot of work to be done yet.

==========

How do I access them and what is the Web?
~~~ ~~ ~ ~~~~~~ ~~~~ ~~~ ~~~~ ~~ ~~~ ~~~

First of all I shall look at what the Web is or to use its full name the World Wide Web. The Web is new way of accessing the Internet, unlike previous methods where you were required to enter commands into the program you were using the Web uses a more user driven method of getting around the Internet. This method is much more graphical than former methods and as such is much easier to get to grips with.

When using a Web browser (the name given to a program used to access Web pages) the control method usually consists of a point and click operation. A Web page will consist of text and graphics which are sometimes highlighted in some way to indicate that they are selectable and link to more information or a particular piece of data.

Such a link is reffered to as a hyperlink. In fact the whole system is a variation on hypertext and uses a script to create each page. Each script is written to a HTML (HyperText Markup Language) standard which contains the main body of text in the page and a few command tags for the browser as to how to format the page and what to do with links, etc.

Web pages may contain text, graphics, sounds, and animations, although the later two are normally supported through external software. It is also possible using

the Web to gain access to newsgroups, ftp sites, and gopher services all through the one program. As such this makes this a very powerful tool for Internet access, and coupled with its ease of use this has suddenly became the big thing in the recent Internet explosion into the media.

Browsers can handle all properly written HTML scripts but may vary in operation when scripts are incorrect or contain mistakes. Browsers can be divided into to distinct types, graphical and text only. Popular graphical browsers include NCSA's Mosaic and the recent new browser NetScape. On the text side Lynx is the most popular textual browser (NOTE: text browsers don't show any form of graphics).

To access the Web you must either use one of the above mentioned browsers on a machine such as a Sun, PC or Mactintosh, or if you want to access it via your Atari you will need a copy of the Lynx browser as unfortunately there aren't any graphical browsers YET for the Atari.

==========

Where do I find the Atari Web page?
~~~~~ ~~ ~ ~~~~ ~~~ ~~~~~ ~~~ ~~~~

>From your Web browser choose to open URL and enter the following address:

          http://www.mcc.ac.uk/~dlms/atari.html

If you can store a hotlist of addresses or something similar on your browser then it may be worth including this address for quick access in the future.

Once you've done that you should see my main page so I hope you enjoy it, and don't forget to write with your thoughts.

(*NOTE*: This is the new site for the Atari Web pages, take note of it!)

==========

U What you will find in the Web pages every month.
  ~~~~ ~~~ ~~~~ ~~~~ ~~ ~~~ ~~~ ~~~~~ ~~~~~ ~~~~~

>From the main menu you have several links available to you, some under miscellaneous and others specific to a particular machine, or collection of machines. It is now possible to mail me directly from the Web pages, special thanks also to Frank Charlton for the new Atari Logo. First I will look at what will be in the Miscellaneous section.

              ****

Atari Related links, Documents, FAQ's and Newsletters
~~~~~ ~~~~~~~ ~~~~~ ~~~~~~~~~ ~~~~~ ~~~ ~~~~~~~~~~

First in the list are "Atari Related Links", these links are to other sources of Atari information or data (such as files, etc.).
~~~~~

There is a link to many of the major Atari holding FTP sites on the Internet. Links to several Web pages by different people on the Atari. This will grow as worthwhile sites come up. At the moment you can visit:

- HENSA to download Atari files (Moderated by Denesh Bhabuta)
- ZFC's Atari Pages by Annius V. Groenink. This has links to various Atari related places, along with talk of his own work on Edith and his new Drive U Project. Annius is also working on a version of the Mosaic browser for the Atari and the best of luck goes to him on that.
- Christer Gustavsson's Atari Gem Programmers Page. Very useful information for programmers grapling with Gem and the operating system. Also offers help via his questions answers page. Some links can be found to Atari related places.
- CAIN Atari Pages. CAIN is the Central Atari Information Network and they create a newsletter which is updately monthly on all things new to do with the Atari. There are also links available here.
- Martin Maisey's Atari Pages. Contains information (downloadable) on programs written by himself for the Atari. Again there are links to other Atari places.
- Toad Computers Pages. Stockiest and retailer of many Atari goods.
- ST Format Pages. Information and previews of ST Format issues.
- Volker Burggraf Atari Pages (German).

Documents

Useful documents will appear in here. At the moment there is:

- Atari FTP List by Mark Stephen Smith (essential for the latest news on who provides Atari FTP sites).
- Atari TOS Desktop Survival Kit by Thomas J Hopper. An essential guide to getting the most out of your DESKTOP.INF and NEWSDESK.INF files.
- Recommended list of software for the Atari by Denesh Bhabuta. List compiled by Denesh for me of his best software for the Atari (updates coming soon). Mostly PD and Shareware, this list contains links to download most of the software mentioned.
- Information on picture formats by Dave Bagget. Lots of information on the format of different picture files for the Atari.
- Information on Viruses.

FAQ's (Frequently Asked Questions)

Useful FAQ's will appear here. At the moment there is:

- Atari ST SLIP FAQ. This is a guide to connecting your Atari to a network. All you want to know about networks and the Atari.
- Atari CD FAQ. Information on getting and using CD's on the Atari. Regular updates to this can be found in my pages.
- GDOS FAQ by Gerd Castan. Got a question on GDOS then this is the place to look.
- MiNTNet FAQ by Christer Gustavsson. Everything you wanted to know about MiNTNet.
- AtariNOS FAQ by Frank Charlton. Answered questions and information on NOS.

Newsletters

Although there may be more to come the following newsletters are updated promptly as I receive them. These have been re-organised to make it easier to keep track of. At the moment there is:

U CAIN Newsletter containing the latest Atari news.
U HENSA Newsletter containing the latest updates to the HENSA Atari archive.
**The HENSA newsletters are now available in HTML form also.

U AEO Newsletter containing the latest Atari news.

Newsgroups

Atari related newsgroups. Send updates. The currently supported news are:

comp.binaries.atari.st
comp.sys.atari.advocacy
comp.sys.atari.announce
comp.sys.atari.st
comp.sys.atari.st.tech
comp.sys.atari.programmer
rec.games.video.atari
alt.games.lynx

****

U Questions and Answers

Submit your questions to here and get them included in this page. Answers are open to anyone who has something valid to say, and help is provided to me on Programming and Music questions by several knowledgeable sources. Please support this section, only by your interaction and questions will it survive. All answers are included in this page for anyone else with the same question and answers are also sent back to the person who submitted the question for those without Web access.

If you feel you have an expertise in a particular area concerning the Atari and would be willing to answer questions on that area when and if I submitted them to you, then please let me know and you can join the team. Programming and Music are fairly well covered and I can cover Graphics programs, help with Technical questions would be appreciated.

****

Reviews

Here I hope to include reviews of Atari products both new an old. So far I have the following reviews:

- Kobold review by Andy Curtis (ST Format)
- Flash 2 review by Frank Charlton (ST Format)
- Edith Professional review by Frank Charlton (ST Format)
- MagiC review by Andy Curtis (ST Format)
- Stello v2 review by Mark Stephen Smith (Myself)
- Sportster Modem review by Frank Charlton (ST Format)
- Storm Tracker review by Andy Curtis (ST Format)
- Connect review by Frank Charlton (ST Format)
- Zero 5 review by Frank Charlton (ST Format)

- MIDI Grid review by Andy Curtis (ST Format)
**Towers II: The Plight of the Stargazer Review by Mark Stephen Smith

There are several reviews on the way by the above mentioned people aswell as some by myself. This section is now growing well now and Nick Peers from ST format recently expressed his interest in writing some reviews also.

Again if you feel you would like to submit reviews for inclusion then please write to me. Please note these pages don't include Lynx and Jaguar Reviews, as they are contained within their own pages.

****

News and Announcements Pages
~~~~ ~~~ ~~~~~~~~~~~~ ~~~~~

Latest Atari news, and announcements from the Atari World. Currently contains the following:

**The Nordvic Atari Show 1995 Announcement
**Fried Bits Coding Covention III Results
**Freedom Fileselector Announcement
**Substation News
- Nova Graphics Board Announcement
- Sozobon C Announcment
- FTP site Announcment
- Fried Bits Eastern Coding Convention 3 Announcement
- Portfolio Club Announcement
- Towers II release Announcement
- Universal Virus Killer Book Announcement

****

**Games Tips, Cheats and Solutions
  ~~~~~ ~~~~ ~~~~~~ ~~~ ~~~~~~~~~

This is a new section introduced to help the Atari gaming community. It covers all Atari formats but is currently divided into the following areas:

Atari Computers
~~~~~ ~~~~~~~~~

Tips and cheats for all Atari computers. Cheats included are:

**Robinsons Requiems Tips

Atari Jaguar Console
~~~~~ ~~~~~~ ~~~~~~~

Tips and cheats for the Jaguar. Cheats included are:

**Iron Soldier All Weapons and Levels Available Cheat

**Iron Soldier Unlimited Ammo Cheat

Atari Lynx Console
~~~~~ ~~~~ ~~~~~~~

Tips and cheats for the Lynx. This section is currently empty.

Submission of game tips, cheats and solutions for any Atari format are welcomed and should be mailed to me.

****

Updates and Information on these Web Pages
~~~~~~~ ~~~ ~~~~~~~~~~ ~~ ~~~~~ ~~~ ~~~~~

All updates and news on the Atari Web pages goes in here. Previews of whats to come soon are included and new items or updates to the pages are listed according to date with the most recent being first. Most updates contain links to the new material for instant access.

Other things to be found in here are the number of accesses to the Atari pages. At the moment this is not supported.

****

This now concludes the Miscellaneous section. Now onto the Other Pages. These pages are specific to a particular machine, or collection of machines. These are going to go through some major changes and you can expect a fair number of changes to be made to these in the next month or so.

****

Falcon Page
~~~~~~ ~~~~

This will contain information and files relevant to the Atari Falcon, currently this page is divided into the following areas:

News and Previews
~~~~ ~~~ ~~~~~~~~

In here expect to see any news or previews that come my way, whether they be small descriptions or full features with pictures. At the moment there is:

- Pinball Dreams and Llama Zap News.
- Apex News. This contains some information I got on Apex Media for the Falcon when I spoke to Douglas Little on the phone a few weeks back. Not very detailed unfortunately, but I'm waiting on my copy of Apex to give a full review so expect that to be rectified soon.
- Dextrous News. Small description of some of the features of Dextrous with a

  picture. Only at an early stage of development, if I hear more it will go in
  here.
- Towers II : Plight of the Stargazer. Pictures and description of this great
  looking Falcon only sequel to Towers. Expect the demo soon.
- Towers II : Plight of the Stargazer Update! The latest news on developments.

HENSA Atari Falcon letters are no longer duplicated and held in this area.
Instead there is now a link from this page to the HENSA Atari Falcon Newsletter
page.

Misc
~~~~

Miscellaneous information on the Falcon, including:

- Falcon Demo FAQ. List of Demos for the Falcon, including some form of
  information on each.
- Compatibility list of games with Falcon.
- Compatibility list of applications with Falcon.
- Falcon Specifications and Information compiled by Rod McCall.
**Falcon Owners List by rod McCall
**Falcon Developers List by Rod McCall
**Falcon BBS List

New Software
~~~ ~~~~~~~~

The latest Falcon/enhanced software available for download. Major revisions to
be done with updates here. All files now list there size so you can see how large
they are before downloading. At the moment the following software is
included, with more to come:

**3 Demos each under 96K from the Fried Bits III Convention
- Apex Media Demo (Demo version of the animation and art package for the Falcon)
- Towers II (Shareware game)
- Super Bomber Man (freeware)
- Play MPEG v0.70 by M.D.Griffths (shareware)
- Speed of Light v3.8 (shareware picture viewer)
- Scape a planetary landsacpe generator.
- Digital Tracker demo of commercial version.
- Obsession 1 level demo.
- FOG issue 8 diskmagazine for Falcon.

Other software worth having
~~~~~ ~~~~~~~~ ~~~~~ ~~~~~~

Software worth using on the Falcon.

- Backward v2.52. For compatibility with the ST. Please send any versions
  which are newer than this.
- MultiBlow. Configurable overscan utility.
- Starball. Excellent pinball game (Falcon enhanced).
~~~~~

- Berzerk. Excellent version of Berzerk (Faster on Falcon).
- FOG issue 7 diskmagazine for Falcon.
- FOG issue 6 diskmagazine for Falcon.

****

Atari ST/STE/TT/Mega STE Page
~~~~~ ~~~~~~~~~~~~~~~~~ ~~~~

This will contain information and files relevant to all the above mentioned Atari formats, currently this page is divided into the following areas:

News
~~~~

In here expect to see any news or previews that come my way, whether they are small descriptions or full features with pictures. At the moment there is:

HENSA Atari TOS letters are no longer duplicated and held in this area. Instead there is now a link from this page to the HENSA Atari TOS Newsletter page.

New Software
~~~ ~~~~~~~~

The latest (most recent versions) software available for download. Major revisions to be done with updates. All files now list there size so you can see how large they are before downloading. At the moment the following software is included, with lots more to come:

- Speed of Light v3.8 (shareware picture viewer).
- ST Zip v2.6. Latest version of ST Zip.
- Obsession demo. 1 level of this great pinball game.

Other Software worth having
~~~~~ ~~~~~~~~ ~~~~~ ~~~~~~

Software worth having on the Atari.

- Utopus. Two player shootem' up (STE only).
- Ozone. Good platform/puzzler.
- Starball. Excellent pinball game.
- Berzerk. Excellent version of Berzerk.

****

Lynx Page
~~~~ ~~~~

All the latest news and reviews on the lynx, along with cheats, etc. This page is divided in to the following areas:
~~~~

News
~~~~

News on the Lynx and related material. At the moment there is:

- Lynx Summer Steal Deal Extended to the Fall. News of price reductions for a limited period.

Reviews
~~~~~~~

Reviews for just about every Lynx game ever released will appear in here. All reviews are by Robert Jung. At the moment the following reviews are included:

APB	Awesome Golf	Baseball Heroes
Batman Returns	Basket Brawl	Bill and Ted's
BlockOut	BattleWheels	Blue Lightning
California Games	Checkered Flag	Chip's Challenge
Crystal Mines II	Dino Olympics	Dirty Larry:Renegade Cop

**Promotional Video for Jaguar

Other Jaguar Pages
~~~~~ ~~~~~~ ~~~~~

Other pages specific to the Jaguar included in here. Currently there is:

- Atari Jaguar Homepage by Christian Svensson

There are others that will be included, some containing more recent news, but the one above is the most organised and intuitive one I've came across.

****

8 Bit Atari Page by Ivo van Poorten
~ ~~~ ~~~~~ ~~~~ ~~ ~~~ ~~~ ~~~~~~~

Not maintained by me these pages cover the 8 bit formats of Atari machines and are very comprehensive. Nearly everything you could hope to find is contained within these pages.

****

What to expect in the future

~~~~ ~~ ~~~~~~ ~~ ~~~ ~~~~~~

Some structural changes are likely to appear in the next months. I have introduced an announcements page where you can tell the World of anything you have to announce. Please send news of updates to your programs, Atari stuff for sale, and any other Atari announcements here (NOTE : Commercial companies should send information on products to be included in here and in the news sections).

This month saw the introduction of the games Cheats, Tips and Solutions area. Currently this is fairly empty but will grow, your support would be welcome. This section covers all Atari formats including the 8 bit machines and consoles. It is currently split into Atari computers, the Jaguar and the Lynx areas.

In the near future I will be adding a Portfolio section to cover the portable computer by Atari called the Portfolio. This area will be supported by Jan Sedlak of the Portfolio club.

There is an outside possibility of starting a programmers and/or MIDI section in these pages but this is as yet undecided. I will judge whether or not to do this based on the kind of response I have. I do not want to repeat any of the good work done in these fields however by other Web page writers such as Christer Gustavsson (Where is the response for these pages?)

More support is needed for the questions and answers pages, although initially successfull people just stopped posting their questions. Although the odd one is still coming and answers are still forthcoming. Please support this, it is of benefit to anyone who uses it.

The Jaguar section should have a lot more news, pictures and reviews in the future. I have tracked down a fair bit of news and am in contact with a few companies now and hope to get news from them on there products.

Both the ST and Falcon sections should contain much more news in the future, along with more of the best PD/Shareware, and PD/Shareware reviews. I should have several demos hopefully in the near future for games coming out on these formats.

The Lynx section is to continue to get reviews and I will update the news as and when I get it. Sorry about the lack of updates recently, more to come.

Expect more links to Atari related pages in the future. There will be more newsletters, documents, and updates to the FAQ's.

Expect further reviews from Andy and Frank, along with myself (watch out for the Speed of Light review). Hopefully I can include more screenshots, and do a few program tutorials. Nick Peers of ST Format and Holger Kipp have offered to support these pages with contributions in the future.

Please write with your ideas, critisms, comments, submissions (software, news, reviews, questions, etc), to me and don't forget that I am now the official maintainer of the Atari FTP list originally by Hallvard Tangeraas. All updates to this list should now be sent to me.
~~~~

Thank you and see you with the updates to these pages next month!

Hi,

If you are interested in the new Atari compatible computer the EAGLE
you can see it live and form your own opinion, if you can contact
Robert Knoell in Germany.

He is presenting the EAGLE in order of the manufacturing company.

Please phone to make a date: ++49 7127 3906

The location is Altenriet in South Germany near Stuttgart and Esslingen.

Ciao

MagiCMac
****

MagiCMac is an alternate operating system for Apple Macintosh computers.
It allows you to run Atari ST software on your Macintosh in cooperation
with Macintosh applications.

MagiCMac runs on Macintosh computers with System 7 and a 68030, 68040 or
PowerPC CPU. We recommend at least 6MB of RAM installed on your Macintosh.

On any of these machines MagiCMac is faster than an Atari TT, up to 4 times
on average.

The demo will run for 15 minutes.

The english demo version 1.2.1 has been uploaded today to info-mac.
Info-Mac mirrors are available all over the world. The file's name begins
with magicmac-1.2.1-e-demo. It should be available on the mirrors in one or
two days.

To extract this archive you need Stuffit Expander (freeware) or Stuffit
Lite (shareware). If you haven't downloaded this file using a program on a
Macintosh, you'll have to decode it first using MacBinary (Stuffit Expander
does this automatically, Stuffit Lite has a menu section for it).

==========

DUftp
(C)1995, Data Uncertain Software
==========

What is DUftp?

DUftp is a GEM based FTP (File Transfer Protocol) program for use
with MiNT and the MiNT-net networking drivers. You can use DUftp
under MultiTOS, or just under plain GEM, as it uses non of the
MultiTOS AES extensions. You can use DUftp to fetch files from
any FTP server on the Internet (or any other TCP/IP based network).

This was inspired by Rapid Filer on the PC, which provides a very
simple way of transferring files (although Rapid filer does a lot
more than DUftp, as it's very like Kobold in the way it speeds up
disc access).

Why Should I Use DUftp?

Well, the standard FTP for MiNT-net is a text based Unix port, and
although it works well, it looks a bit naff. DUftp is loads easier
to use. As well as the just transferring files you get the following
extra's:

     o Web-browser style bookmarks for fast access to your fave sites.
     o Automatic logins.
     o Full modern GEM interface (windowed dialogs all round).
     o Runs under MultiTOS or plain GEM.
     o Drag & Drop style file transfer.
     o Multiple connections at the same time (under MultiTOS).
     o Abuse from unix fans for being a pussy and wimping it.

    o Fast, reliable transfers (code based on the BSD Unix ftp).
    o Envy from PC users who have to pay for this sort of thing.
    o AES 4.1 iconify support.
    o Pretty colour icons.
    o No command lines to fart around with.
    o Integrated with DIP to handle your dial-up SLIP connection
      for you (simple Connect/Disconnect menu options).
    o Only uses 200K when running.
    o Context sensitive help.

Credits

Written by Craig Graham of Data Uncertain Software.
GUI done with Interface2, coded using Lattice C 5.52, all on a falcon030
4/32Mhz.

Thanks go to the following people:

o Steve Sowerby for the initial work porting the MiNT-net libraries to
  Lattice C.

o Chris Ridd for the MiNTLIBpl46 port to Lattice.

o Kay Roemer for MiNT-net.

o All the folks who do beta testing for me (DUftp & CLA).

Craig.

newsgroups: comp.sys.atari.announce

Homa Systems House is proud to announce a New product, the ATARI CD MASTER (ACM). ACM is a an authoring system for a number of DOS/WINDOWS popular CD ROMS. ACM has the following features:

- easy user interface, full multitasking in a window
- pictures are viewable on 2, 16 color, 256 color modes, including graphics cards and the Falcon
- Powerful search features, with "narrow down" option. On TIME almanac, you can search the whole CD for a particular key word(s)
- Upto 4 text windows open, with one picture window
- Save, print, ...

The following CDs are supported so far:

1- TIME ALMANAC OF the 1990s. This CD contains all the TIME magazine articles from Jan 1 1989 to May 4 1994, will all the pictures. It also has the TIME MAN OF THE YEAR, the CIA FACT BOOK (tonnes of data/picture on various countries (>150), organizations, world statistics), MAPS, Almanac charts and articles. View portrait profiles on 12 major persons and events of the 20th century, highlights of each decade and all the presidential elections, and more! This is a great encyclopedia of world events. With ACM, you can access all the data files, pictures on any ST with monochrome graphics, or on VGA 16 color or 256 colors (TT, Falcon, graphics cards) up to 1280x1024, save and/or print them. You can also do a thorough search on all the articles/ pictures, and/or narrow down your selection to reach to your desired information.

2- UFO (I or II): This is an exciting CD with over 1300 articles, many of them with amazing graphics describing UFO events from prehistoric times to the present.

3- Space Missions: This CD contains over 1600 articles, with over 700 with astounding pictures on all the space missions form all over the world (USSR, USA, CHINA, England, ...)

4- Audio CD Master, v4, which is the ultimate Audio CD player on the ATARIs. With this program (or accessory), you can play Audio CDs in the background of any application using any SCSI CD ROM, even the popular NEC 25, which no other player supports. It requires -> no <- other drivers (i.e., metados, extendos).

Version 4 has lots of new features/enhancements, 3D buttons.

Audio CD Master offers the following:

Play, stop, pause, resume, FF, REW, eject, track options.

Track options allow you to specify a range of tracks, i.e., from 2-11, or play a single track, or play programmable tracks. You can assign up to 16 tracks to play, and also save them, so the next time you insert the CD, the program automatically asks you whether you want to play the previously saved sequences.

You can play anywhere within a track, i.e., track 4, minute 3, and second 11, for ultimate control eg: for musicians.

Displays the track names (by their name of the albums/and tracks) for the current CD, and also you can select tracks by their names (if you have a lot of CDs, you don't need to memorize all the track numbers anymore)

Works as a program or accessory, any resolution.It is also multitasking. Has an alternate window (a much smaller one) with all the main buttons (play, resume, pause, stop) in order to have instant access from within any program.

ATARI TT, Falcon, ST with ICD is required.

Also with ACM, you get Audio CD Master 4.0 (upgraded from v3, It's all relative) which is the ultimate in Audio CD player on the ATARIs, from the ST to the Falcon.

Atari CD MASTER will have new drivers added to it periodically, for a nominal fee. Pricing is as follows:

ATARI CD MASTER, complete 4 pack for only ..... 39.95 US$
Upgrade for Audio CD Master(v3) owners ..... 25.00 US$

Upgrades can be done by sending your disk directly to Homa systems House or It's all Relative.

We can also supply you the CDs for $15 for Time Alamanc and UFO. The price of Space missions is not yet known, but will be around the same figure.

As mentioned previously, you can expect more CDs to be added to the list (we are working really fast, there are two more CDs in the works, estimated release time, two weeks)

At Homa Systems House, we are dedicated to bring you quality software and hardware. If you want to be on our mailing list, please send your name and address to one of the following:

Homa Systems House
P.O.BOX 52127
OTTAWA, ON K1N 5S0
CANADA
TEL: (613) 722-0901
FAX: (613) 722-9061

EMAIL:
genie: NIMA
internet: aa414@freenet.carleton.ca

You can expect to see ATARI CD MASTER on your friendly dealer's shelf, or directly from us.
We accept Visa/MC, or money order, or cheque for methods of payment.

3% surcharge on credit cards.

We sell the CDs $15 US each. You can also buy ATARI CD MASTER, TIME ALMANAC 1990'S, UFO, KEYFONTS CD (thousands for TT fonts), KEY CLIPARTS CD (thousands of cliparts) all for 69.95 U$.

Also as a side note, the above TIME driver can also use the TIME ALMANAC 1994 REFERENCE EDITION which has almost everything in the 1990s edition (execpt the 1994 stuff) plus TIME MAN OF THE YEAR.

In two weeks time, there will also be a driver for 1995 INTERNATIONAL AUTO ALMANAC. TONNES of information (picture and text) on 1994 and 1995 automobiles.
--
/\/\/\

Hardware: >=1MB, Harddisk!

Memory: needs 170kB

Changes: - Own copy/move actions (in background!) via Clipboard
  and drag&drop
- new Filetypeconzept (Typnames, -priorities und -colors)
- New: full nonmodale *Multi*-file-selection even with
  programs like Pure C!!
- finally crash-free under SingleTOS
- Trappers are running under MagiCMac from Auto-Folder
- many further bugfixes

Archives: FRDM114D.LZH (Deutsh)
FRDM114E.LZH (english, with little delay)

Download: ftp.cs.tu-berlin.de
(pub/atari/incoming or pub/atari/Utils/Disk)

PS: From 6. July to end of July we both are not accessible. If you want to register, then do it now, if you dont want to wait a month for the key!

We are pleased to announce that our home page on the World Wide Web is now 100% functional. Here you will be able to read about our new releases, DOWNLOAD our latest products, read about our up and coming releases like Choplifter'95 and Megaspace!

Squaroff.zip - Our new 1-2 player Tetris(tm) game. 1meg STe/TT/Falcon

Frantick.zip - Arcade shoot-em-up. Includes dma soundtrack 1.
Astr_fal.zip - Our asteroids update for the Falcon!
Astr_ste.zip - STe archive of our asteroids type game.
G_shell.zip   - Our GFA BASIC programmer's shell.
Seawolf.zip   - A FREEWARE game. Arm the torpedos!!

Munsie01.zip - Issue 1 of our new disk-a-zine which features
plenty of information on our new products. Screen shots of all our
products including up and coming games like Choplifter'95
and Megaspace! Check it out....

* *

Now you can order/register any of our products directly from some of
the leading Atari vendors through out the world. These vendors are set
up to allow you to call them and give them your KEY code and they will
tell you your registration code over the phone! Or you may take the time
to mail them your order if you like. Please take the time to consider
registering any of our currently available products through ANY of the
following list of Atari vendors.

 PS!!! 155.198.1.40 is more reliable!!!         - (uni-paderborn, GERMANY)

- to find the numbered address of the FTP site, use the following command,
  while inside FTP:  ftp> !host FTP-address [CR]  i.e. "!host cs.bu.edu"

DOWNLOADING FILES, Instructions:    [CR]= carriage return/return/enter
--------------------------------
1)  Go to the directory where you want the files to be downloaded.
2)  ftp [CR].
3)  open {ftp address} [CR].                 i.e. "open ftp.uni-kl.de" [CR]
    OR use the (IP) number address, NOT both!
4)  "Name": anonymous [CR].
5)  "Password": {full e-mail name/address}.  i.e. "hallvart@ifi.uio.no" [CR]
6)  use "cd" to access the appropriate directory.  i.e.  "cd pub/atari" [CR]
```

7) bin [CR].   (set `binary` transfer mode)
8) hash [CR].   (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR].   i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once.
    i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having
    to reply "y" for each file when asked "get {filename}?".
12) quit [CR] to end FTP session and go back to UNIX
13) close [CR] to close the FTP site you're currently on, so that another
    site can be opened without having to set bin, hash, prompt etc. again.

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on
  which the programs were intended, or in UNIX ....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after
  uncompressing .Z and/or .uu.
  Use the appropriate decompression program for this.

- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
    i.e.   "mget *sys" [CR] (will get f.x.; datasys, lm23isys,
    xlinksys etc...) (ALL files with "sys" in their names)
    i.e.   "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh,
    xlba.lzh etc...) (ALL files ending with ".lzh")
    i.e.   "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to
  another computer (use an other terminal's disk drive);
- rlogin {computer name} [CR].   i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

Part of this is dependent on you having the GNU msdos-utilities available
at your site. If you don't, ask your local system operator how to transfer
files to/from MSDOS disks.

- mcopy {filename} a: [CR] i.e.   mcopy microtcx.zoo a:
                           i.e.   mcopy microtcx.zoo icone.lzh shblr.arc a:

- mdir [CR] to show disk-directory/space left.

- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)

- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for

"low density")

- mcopy a:{filename on disk} {copy filename} [CR] to get a file from
disk to computer. i.e. "mcopy a:dlist.txt test1.zip"

- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

- eject [CR] to eject disks from disk-drives that don't have "eject buttons".

- -

Subject: TAF DISK SET AVAILABLE AT HENSA
Date: 1995/07/07
Message-ID: <DBLuv3.3I9@world.std.com>#1/1
X-Deja-AN: 106178200
approved: Lexicor
sender: Lexicor@world.std.com (ysiu@lexicor.com)
organization: Queen Mary & Westfield College, London, UK
newsgroups: comp.sys.atari.announce

The TAF disk set to install Chimera and X-Windows is now available at
HENSA. Paths at the end of the message:

Graphical web browsing is finally here on the Atari.

- -

MINT - X Windows - SLIP/PPP - Chimera - Telnet - FTP
Version 1.0 (BETA) 95/04/23
- -

Requirements:
---
(1) 4M RAM
(2) 10M (Min) available SEPARATE Hard Disk Partition (other than your boot partition)
(3) An Internet Service Provider with PPP - SLIP acceptable but untested.
(3) Mono Graphics mode (ST High, Falcon, TT High)
(4) ST UNZIP Program, TOS/GEM based text-editor (recommend: VI.TTP)

Recommendations:
---
(1) 14.4 Modem - Appropriate Modem RTS/CTS patch
(2) A Boot manager (SuberBoot, XBoot, etc.)
(3) Recent version of ADHI. (Tested: 6.061)
(4) Knowledge of UNIX, VI editor: Not essential but useful.

720K Installation Disks

INSTALL.ZIP comes on the first disk in the TAF library (ie. disk #1) but ends up needing to be copied to your boot partition. Since this is a download version - you do not need a floppy for this file if you are downloading directly to your hard disk. If you plan to put this in a disk library of some sort, please include INSTALL.ZIP and this file (README.1ST) on a floppy labelled Disk 1.

You will need 6 more floppies labelled Disks 2-7

The following files should be put on the floppies:

Disk 1 - INSTALL.ZIP ; INSTALL.TXT ; README.1ST
Disk 2 - 2a.tgz ; 2b.tgz
Disk 3 - 3.tgz
Disk 4 - 4a.tgz ; 4b.tgz
Disk 5 - 5.tgz
Disk 6 - 6.tgz
Disk 7 - 7a.tgz ; 7b.tgz

1.44M Installation

For the 1.44M setup you will need 3 floppies labelled Disks 1-3. If you are making 1.44M distribution disks for a library please include this file (README.1ST) on Disk 1.

The disks must be set up as follows:

Disk 1 - README.1ST ; INSTALL.TXT ; 2a.tgz ; 2b.tgz ; 3.tgz
Disk 2 - 4a.tgz ; 4b.tgz ; 5.tgz

Disk 3 - 6.tgz ; 7a.tgz ; 7b.tgz ; INSTALL.ZIP

After the disks have been set up correctly (this should already be the
case if you got them from a library) print the INSTALL.TXT file on
Disk 1 and read it very carefully before trying to start any installtion.
A complete set of intructions are included in that file.

If you can't find INSTALL.TXTon the disks, it is also included in the
INSTALL.ZIP file.

NOTE x-total.zip is a complete collection of the rest of the
NOTE files in this archive.

File sizes: 3711248, 215076, 329828, 592746, 505069, 155590, 484172,
            550261, 254899, 155897, 20963, 441978, 3669

It's online as files

micros/atari/mint/a/a073/x-total.zip
micros/atari/mint/a/a073/2a.tgz
micros/atari/mint/a/a073/2b.tgz
micros/atari/mint/a/a073/3.tgz
micros/atari/mint/a/a073/4a.tgz
micros/atari/mint/a/a073/4b.tgz
micros/atari/mint/a/a073/5.tgz
micros/atari/mint/a/a073/6.tgz
micros/atari/mint/a/a073/7a.tgz
micros/atari/mint/a/a073/7b.tgz
micros/atari/mint/a/a073/install.txt
micros/atari/mint/a/a073/install.zip
micros/atari/mint/a/a073/readme.1st

Download and enjoy. :-)

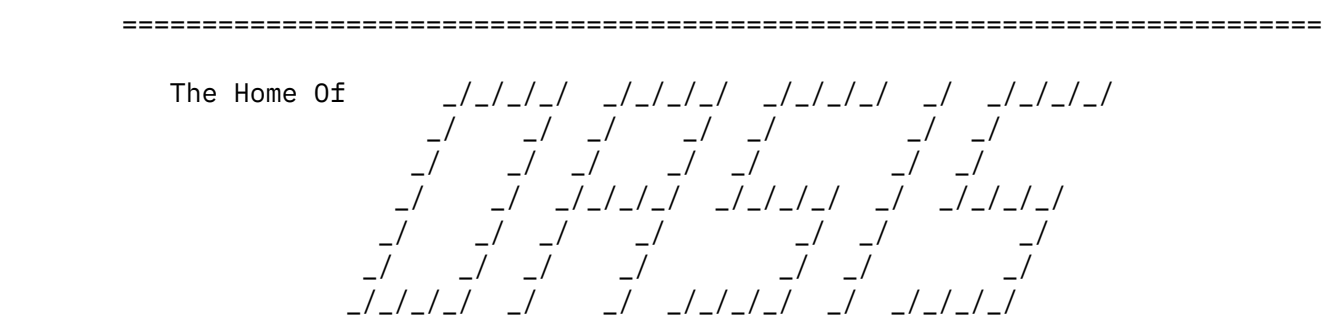
Hi there,

Would anyone who has or is using OASIS please E-Mail me, I will then add you to the mailing list so that you can be one of the first to know when version 1.20E is available.

This version is currently in BETA test (nearly finished) so it should be released in the next two weeks.

If anybody has any comments regarding OASIS please feel free to contact me at anytime, I am always glad to answer any questions.

--



Hello

I am looking for people who can translate the OASIS manual and program into various languages.

I am on the verge of releasing a new version of OASIS and would very much like to release multi language versions.

The languages I am most interested in translations to are German, Dutch, French, Itallian and Scandanavian (Finnish, Danish, Swedish). I mention these languages particularly because I know of people in these contries using OASIS, but any other languages would be welcome.

The actual task would involve me sending the victims (sorry volunteers) the complete manual and all Menu, Dialog and Alert texts via E-Mail and then upon receipt of the translation, building this back into a custom version of

OASIS for that language.

Please be warned, I cannot make anyone rich for performing this task, but as we intend to write a NOS replacement and a Web Browser which would be shareware, free versions of these programs would of course be sent to the translators.

Come on people, do your bit to keep the Atari scene alive, the more people who have access to Atari software the longer we all get to use these damn fine computers.

Thank you in advance to anyone who feels up to the task.

--

Lexicor Software Corporation is the US distributor for 16/32 Systems Atari Falcon adaptation of Tengen's coin-op STEEL TALONS. The game was favourably reviewed by such magazines as ST FORMAT, Llamazap and Pinball Dreams on the Falcon.

The game is a fast and colourful 3-D helicopter action simulation; full use of the Falcon's hardware results in an impressive polygon landscape

and great speed and scrolling. Anyone who has played the original Tengen coin-op will not be disappointed with STEEL TALONS for the Falcon. There are a number of missions to complete, enemies to harry and numerous attacks to avoid.

STEEL TALONS is available from Lexicor Software, retailing at U$D 49.00. To order a copy, write to:

Lexicor Software Corporation
108 Peterborough Street, 3rd floor, suite H
Boston, MA 02215

or call (617) 437 0414 or fax (617) 437 9413

email: games@lexicor.com

Other games available are: Llamazap and Pinball Dreams

currently all games, Steel Talons included are going for a holiday special of only 35 U$D!

newsgroups: comp.sys.atari.announce

Spooky Sprites is a true colour sprite creator for atari falcon. It's freeware and has been uploaded to ftp.cnam.fr.

Some of the changes from the the last version are:

The largest change is that you can use the sprite editor in double pixel mode (768*240) if you use a rgb monitor or tv. The video mode is changed in the preferences menu. Switching between ntsc and pal on rgb now works as it's supposed to do (you cannot do this on vga monitors). Doubling and halving of sprite width is now implemented. This allows you to convert medium resolution sprites to low res and vice versa. New paste mode Merge. Pictures can now be saved in a run length encoded format.
Faster sprite loading. Flood fill added. Can be installed as TRS application and load sprite files automatically.

You may now create a picture containing all sprites. Some multitasking during the most time consuming operations. Lots of minor bugs removed.

Hope you like it!

Johan

Following on from Lottery Companion 1 which achieved 60% in ST Format, Lottery Companion 2 is now available.

The program is arguably the most powerful and comprehensive National Lottery Program available for the Atari range of computers, and even runs on the Falcon.

Complete UK statistics including Ball Set, Draw Machine, Draw Order and Date of Draw are included.

It uses a friendly combination of Windows, Drop-down menu's and Resource fields and buttons on top of a powerful number generation and statistical engine.

Random, Manual, Range, Hot, Cold, and Wheel with 0 to 5 Bankers can be used to select over 7000 number sets per file. you can have as data files as you like with personal or syndicate number sets.

The program is Shareware with Registration and six months Support from as little as five pounds.

But why not look for yourself? - Message a request for a copy of the program personally to me, and I'll be happy to mail it back in UUE format.

Alternatively send a Disc and S.A.E. to LC2, 8 Brookside, LE10 2TL.

Note: This is not a ruse to add your name to a mailing list, I am an independent Shareware author who has been writing for the Atari 16/32 bit range since 1988. I will only contact you again if invited to do so.

It's great to see such a thriving Atari community of the NET, and I look forward to becoming involved in the many On-Line discussions.

I hope to hear from you soon.

newsgroups: comp.sys.atari.announce

Finally BlowUP-The Falcon Company has finished it's ultimate extension-card for
the ATARI Falcon030:

```
 FFFFF X    X
 F      X  X
 FFF     XX
 F      X  X
 F     X    X  the Falcon Xtender
```

And these are the Features:

FastRAM-Expansion (max. 32MB)

** 4 SIMMxSlots onboard (fits into original case)
** 4 additional slots on optional daugther-card
** 1MB and 4MB SIMMs, two-by-two

** The original 4MB of the Falcon stay active.
** With only 2*4MB and 2*1MB inserted, your Falcon then has 14MB!
** Memory over 14MB is organized virtually.
** With speeder: data throughput up to 20MB/s   (standard 8MB/s).
** No soldering for RAM-function neede!
** Expansion-port daisychained!   Tested with NOVA & FalconSpeed!

Hi-Speeder: CPU, DSP & Systemclock:

** Systemclock 32, 36 or 40MHz
** CPU/FPU-Clock 16,18,20,32,36 or 40MHz
** DSP 50 instead of 32 MHz
** Switchable by software.
** Soldiering needed.

Resolution-Expansion BlowUP Hard I

The original with the Video-Mode-Generator
with improved bustiming higher resolutions/refreshrates in 256
colors/TrueColor.

Installation:

If only the RAM-option is to be used, no soldering is needed for
installation.
The card is simply plugged into the expansion-slot, which is daisychained, so
that other expansions might be used in rebuilt (tower-)Falcons. Only a small
piece of the
shielding has to be removed in normal Falcons. For the speeder-option
soldiering is needed as with other speeders available, so that rebuilding
from

those other Speeders is easy. Soldiering should only be made by routiened
people.

Fast-RAM:

The Fast-RAM follows the Falcon RAM (4MB), the original 4MB-RAM-PCB in
Falcon will still be used! There are 4 SIMM-sockets on the FX-card giving you
two 16bit memory-banks. With an optional daugther-card two further Banks are
available (fits only in
rebuilt Falcon e.g. tower). The memory-banks may be filled with 1MB or 4MB
SIMMs. This is an easy way to get 14MB with only 2 x 4MB and 2 x 1MB SIMMs.
Our FastRAM can be used for all functions , including DMA-access, except
video. As there are no
video-accesses on the FX-RAM it is up to 50% faster in color modes. The
FX-RAM
normally has no problems with installed Speeders. If the Speeder on the
FX-card is used, a special Page-mode will be used for RAM-access in the
32/36/40MHz-modes. This allows
RAM-access with no waitstates and increases the memory throughput from
normally
8MB/s to max. 20MB/s. If you don't need the speeder FX is a simple "plug'n

play" memory-card.

If more than 10MB is inserted into FX the upper part is switched by the MMU an
the FX-logic. The management of the extended memory is done fully invisible for all applications with the PMMU of the 68030 CPU. The speed-loos with this is minimal compared
to virtual RAM on a harddisk. This optional configuration allows a maximum use of
32MB. So that 8MB are standard FastRAM (no video-access) and 24MB are EMS-RAM.
For standard applications there is no difference.

CPU-Speeder:

The Speeder included on the FX-card increases the system-clock from 32 MHz to
36 or 40MHz. The CPU then can run with 16MHz (normal), 18MHz, 20MHz, 32Mhz, 36MHz or 40MHz. With the special FX-logic now nearly all Falcon can use the 40MHz clock. The clock
may be switched on booting or later with a CPX-module. We have also solved the
problems some programms had with the DSP if the CPU ran at 40MHz and the DSP at 50MHz. Soldiering is needed for installation.

DSP-Speeder:

Increases the DPS speed from 32MHz to 50MHz! Superb for MPEG-Decoder. Solved problems with CPU at 40MHz. Soldiering is needed for installation.

BlowUP Hard1:

The well known and time-tested resolutionexpansion also found a place on the FX-card. With the confortable Software and super resolutions (e.g. 800*608 at 84Hz ni, 1024*768 at 104Hz i). Soldiering is needed for installation.

Tecnical data:
size ~160mm*65mm, simply plugged into the expansion-slot (put trough)
power taken from expansion-slot
4 SIMM-sockets onboard for 1M*9/1M*8/ 4M*9/4M*8 SIMMs (min 70ns),
with changed FIRMWARE 16M*9 can also be used
4 additional SIMM sockets on daughter-board
with 2*4MB and 2*1MB SIMMs power consumption of ~200mA.
Controllerchip reprogrammable by software
(Hardware-update by Software possible)

--
And even better!! the price: 349,-DM
Order information:

FX is now available from all ATARI dealers, our distributors in the UK, France, Sweden and the U.S.A.
If you have problems to get it, order directly from us:

Either by normal mail - including a cheque
or by normal mail or FAX - paied by CREDIT CARD (VISA or DINERS donxt forget
to include card-number and Exp. date) -

Please state the way of delivery you prefer:
                    UPS expedited or air-mail (with insurance - w/o
insurance)
e.g. U.S.A.   90DM   45DM

 This message is to make you aware of the "ST News Lamentation Page", a
site where the life and times of the Atari ST/TT/Falcon multi-media
disk magazine "ST News" (1986-1996) are dwelled upon. It's located at
"http://stnews.atari.org".

 The site boasts the most complete gathering of "ST News"-related
information, including an Ultimate Reference Guide, a download section
where all 42 issues of "ST News" ever unleashed on mankind can be
found, a gallery of pictures (including ones of quite a few people in
the 'Atari scene') and a link to the "ST News International Christmas
Coding Convention 2000" organisation and information site. To round it
off, the site is littered with links to over 200 sites somehow related
to "ST News" or the 'Atari Scene' in general.

The "ST News Lamentation Pages" are a huge success and have been visited almost 14,000 times since their inception in May 1998. Come visit to see how alive and kicking the Atari still is!

CLASSIC GAMING EXPO '99(tm) ANNOUNCES DISTINGUISHED GUESTS

AUGUST SHOW FAST BECOMING INDUSTRY PHENOMENON

April 15, 1999

VALLEY STREAM, NY -- Hot on the heals of an announcement by Hasbro Interactive to publish eleven Namco blockbuster classic video games including "Pac-Man" and "Galaga", the Classic Gaming Expo '99(tm)

(CGE'99) promoters released a partial list of celebrities scheduled to attend the August event. In all, over thirty video game and computer pioneers have confirmed plans to actively participate, including industry legends such as Mr. Nolan Bushnell, founder of Atari, and Mr. Ralph Baer, father of the Magnavox Odyssey.

Among the many industry dignitaries that have confirmed their plans to attend are:

-- Mr. Steve Cartwright, Activision designer of such classic hits as "Megamania" and "Barnstorming" for the Atari VCS.

-- Mr. David Crane, Atari programmer and Activision co-founder. Designer of numerous Atari VCS classics including "Outlaw", "Slot Machine", "Freeway", and the mega-hit "Pitfall!".

-- Mr. Rob Fulop, Atari programmer and Imagic co-founder. Designed the Atari VCS versions of "Night Driver" and "Missile Command", as well as "Demon Attack". Also responsible for the highly-controversial Sega CD title, "Night Trap".

-- Mr. Arnie Katz, Mr. Bill Kunkel, and Ms. Joyce Worley. The pioneers of videogame magazine publishing. This elite media trio was responsible for co-founding Electronic Games Magazine and several others throughout the years.

-- Mr. Ed Logg, the creator of numerous arcade mega-hits including "Asteroids", "Centipede", "Millipede", "Gauntlet", and "Xybots".

-- Mr. Jay Smith, mastermind responsible for bringing us the Vectrex, the first and only vector home game system.

Up-to-the minute details and an expanded guest list, as well as discount ticket and travel information may be found at the official Classic Gaming Expo '99 (tm) Web Site at http://www.cgexpo.com.

The Classic Gaming Expo will take place at the beautiful Plaza Hotel on Saturday, August 14 and Sunday, August 15 in the heart of Las Vegas. The Expo includes back-to-back keynote presentations, an elaborate museum containing many rare and unreleased software and hardware products, demonstrations of forthcoming classic products from Hasbro, The Blue Sky Rangers, and Nyko Technologies as well as a spectacular opportunity to buy and trade classic video game systems and software.

Conceived and coordinated by two of the individuals responsible for coordinating last year's highly successful "World of Atari" event, Classic Gaming Expo(tm) is the industry's only annual event that is dedicated to celebrating the roots of electronic entertainment, bringing together industry pioneers, gaming enthusiasts and the media for the ultimate in learning, game-playing and networking. Classic Gaming Expo(tm) is a production of CGE Services, Corp. (www.cgexpo.com)

here is a list of all the new carts we have released n the last 2
years,all carts come in a box,with documentation,except sparta
dos3.3c,we are currently working on doc's,all carts run directly from
the cart port except the 3 utility carts,they are installed,then taken
out,we currently are working on more titles,and we will post them when
we are able to,all titles carry a $19.95 a peice price,
mydos xl/xe only,this is the newest version,and has some improvements
sparta dos 3.3c xl/xe only,this is the most solid sparta yet
translator cart xl/xe only,now you can have fast boot of your
incompatible 400/800 programs,no more wait time for translator disk boot
up,this aso works on many carts
amazemaze 48k,maze craze type game
hearts 48k,based on the popular card game
montana solitaire 64k,nice solitiare type puzzle game
checkers 16k,nice checkers game
jailbreak 64k,2-4 player arcade style game
ricochet 64k,paddles requirerd in this breakout style game
sharp shoooter 64k,light gun shooting game
my jong 64k,chinese puzzle style game

paddle wars 48k,pong style game
bumpers 48k,fast breakout style game
lights out 48k,1-2 player puzzle game
puzzler 48k,20 dungeons of puzzle fun
paddle pack 48k,two pong games on one cart
puzzled 48k,jigsaw puzzle fun
twin pack 48k,two games on one cart,battle ship/jump the pegs
solitaire 48k,real good version of solitaire,nice and addicting
video slots 48k,nice video slot machine good graphics
desmonds dungeons 16k,good platform style game
dungeonlords 48k,like dark chambers,or gauntlet
maze war 16k,fast fun 1-4 player game(4player 400/800 only)
dan strikes back 16k,good platform style game

RELEASE OF NEW SOFTWARE
Exposure is a new software to control light with a Atari ST.
The software is beeing released at NAS in G[illegible]teborg/Sweden.

CHEEP ALTERNATIVE OF CONTROLING LIGHT

Exposure
A new software is beeing released for the TOS-based Atari ST computer to control lightdimmers.
The name of the software is Exposure and is released in its final version v1.00 at NAS (Nordic Atari Show) in G teborg/Sweden 11-13 june.

120 channels for $29.95
Exposure is delivered with 120 channels control as a standard. The number of channels can be patch to maxumum 520 channels.
Exposure uses the PMX protocol (Pulsar) throu RS232/9600bps.
At the low price it s a good alternative for smaller and mediumlarge theatres to ordinary lighttables of a much higher price.
With an Atari ST with one megabyte of ram you may use up to 6000 submasters, with up to 6 at a time.

Showcontrol
It s planned to be a release in august for a add-on component to use MSC 1.00/MIDI Showcontrol protocol.
This means that one single Atari ST can control a mediumlarge show, including fire, smoke, CD-players, intelligent light such as color/gobo and motorised components.

Newsgroups: comp.sys.atari.announce

FromCurt Vendel <cvendel@worldnet.att.net>

Annoucement:

The long anticipated images of the fabled Atari 1600XL advanced computer system are now up on the Atari Historical Society website (http://www.atari-history.com) Also just opened in the second of three new sections inside the Atari Computers area of the website, the Atari Laptop Concept section is now open for public viewing and has some of the most amazing images ever seen.

AHS "HISTORY-FLASH!!!!" :

In other breaking news, the Atari Historical Society has unearthed a long buried truth regarding the well known Western Design W65C816 chip. This chip was NOT designed by Western Design, but in fact in Atari's very own Advanced Semiconductor Group (ASG). Western Design was brought in as partner to assist Atari with making sure its new 16-bit chip was 6502 Opcode compatible. The chip was codenamed "Lynda" after the head of Atari's VLSI group Gary Summers and was intended to be used in future high-end computer systems to allow Atari to move forward with more powerful computers, while maintaining backward compatibility with its existing software base. When Atari ran into difficult times and development had to be stopped, Western Design bought the rights to the chip from Atari's ASG for a measly $35,000! The Atari Historical Society has been in contact with Western Design's owner, Mr. Mensche and so far he has made no comments regarding our inquires to his side of the story. So far 3 individuals from Atari have confirmed Atari's creation and specifications for the "Lynda 65816" chip. The Atari Historical Society is also awaiting receipt of actually hardcopy's of the paperwork behind the project and will post copies in our archives once available.

For links to the newest images and news, please go to the "Whats New @ Atari History Site" link in the Main Menu and read the latest news updates which provide links to all these various projects and more.

NNTP-Posting-Date: Thu, 29 Apr 1999 01:39:41 GMT
Newsgroups: comp.sys.atari.announce

From Steve Delaney <floppyshop@cyberstrider.org>

Hi All,

Welcome to the final message from Floppyshop. As you all know, we closed our doors for the last time in mid-February. A lot has happened since then and that's really why this message has taken so long to compose.

When we announced our closure, we did not know what sort of reaction to expect from our customers. We were unsure as to whether we would be greeted by complete apathy, a trickle of nice letters or a total backlash of angry letters from those who considered us to be leaving the sinking ship. What we did get was none of the above and we were literally rendered speechless (those who know Steve will understand just how difficult it is to do that)!

From day one, we were inundated with orders. Naturally the knock-down prices were a major contributory factor, but there was more to it than that. Customers were buying up everything they had been intending to get round to purchasing one day, and they wanted to stock up while they could. This mad rush only really slowed down after our official closing date of 30th January 1999, something which certainly surprised us! It showed a high level of trust from our customers, many of whom had been with us for 10 years or more. Nobody was concerned about us disappearing without trace and failing to supply their goods, like so many others in the Atari market have done. Accordingly, trust like that has to be earned and all orders (even those which arrived after our extended closing date of 12th February) were honoured up to the time our PO Box closed down.

Equally important were the messages of support we received from customers during the course of the sale. They ranged from brief telephone calls to lengthy letters and emails, all of which were most welcome. The number of Atari users who took the time to thank us for the services we had provided for them over the years and wish us well in our future exploits, was phenomenal and indeed totally unexpected. From our point of view, we were only doing our job and we were not looking for gratitude, though such messages were well received and most appreciated. Please allow us to express our gratitude to you. Without an Atari Community in the first place, Floppyshop would never have existed. It was an important part of our lives and the memories will remain with us always.

Many customers expressed concern about what would happen to our products after we closed down. We too had our doubts and were delighted when several companies and individuals approached us with a view to taking over remaining

stocks. We are pleased to announce our surplus stock of commercial products and the distribution rights to most of our CD-ROM compilations have been acquired by our good friend Paul Glover at FaST Club. Paul was probably the first to start up a PDL shortly after the release of the ST and has a longer pedigree than us! His expansion into commercial software and magazine publishing has made FaST Club a household name worldwide. We would like to thank Paul for ensuring these products remain available to Atari users. Similarly, our Public Domain/Shareware Library has also been saved from extinction! In this case, our thanks go to Andrew Plumridge of Falcon's NeST PDL for his brave and salient rescue of this fine collection (well we would say that!). Andrew has pledged to update and expand the PDL with catalogue updates being sent to regular customers in the true Floppyshop tradition. These two staunch Atari supporters have been prepared to go out on a limb in order to ensure continuing support for the Atari Community. We trust you will repay them for their efforts with the same level of support you have always given us.

It was only natural that all rights to our Sounds & Stuff CD-ROM should revert to Electronic Cow as they were responsible for its compilation. A number of the other packages we sold in the last couple of years are still available through Atari Computing's readers offers.

The "Floppyshop Commemorative Site" is now on the Web. Funny how we had to close down to find time to finish the site! The main page leads to three distinctly separate sites. There's a potted history of Floppyshop in our "Ancient Burial Site" and and a quick roundup of the Atari Scene in our Contacts Site, finally there's the Virtual Christmas Party which is near identical to our Christmas 1998 site, suitably updated to take account of the changes which have taken place since then. "Our Virtual Christmas Party" site had over 1100 visits, we're looking forward to reaching our "second millenium" with this one!

All the information on our former releases can be found here as well as full contact information, not only for those whose who have taken over the distribution of our products, but also to everyone who's anyone in the Atari scene.

It's Been Fun, Of That There's No Denying. All that remains is to wish the Atari Community well for the future and thank everyone for their friendship and trust over many years. In the words of my late grandfather, Tom Delaney, Everything In Your Favour's Against You, but as an Atari user, you'll rise above such things and face the future with a courage and determination no PC owner could ever hope to match.

Thank you for everything, may you live long and prosper.

Goodbye from

Steve Delaney and Irene Lamb

Commemorative Site at http://www.floppyshop.cyberstrider.org

PS If you want to know what we're up to nowadays, our new company's site

will be going live in a few weeks at http://www.mirrorimages.co.uk

Newsgroups: comp.sys.atari.announce,comp.sys.atari.8bit,comp.sys.atari.st

As the new moderator of comp.sys.atari.announce, I feel it is necessary to update the newsgroup's guidelines regarding what types of posts are appropriate. What follows is a draft of those posting guidelines. Of course, I welcome feedback regarding this document. After discussion of any issues that are brought up, the final version of the document will be posted. Please send followups to comp.sys.atari.8bit.

comp.sys.atari.announce began as a newsgroup intended only for hardware/software product announcements. Atari-related products are a rarity these days, which is one of the reasons that the newsgroup has languished in recent years. The focus of the newsgroup is widening to allow any news relevant to Atari computers. For instance, announcements about Atari Web sites and events are now appropriate.

Following this draft, I've included the original posting guidelines that were written when the newsgroup was chartered. I have tried to keep changes to a minimum, while expanding the focus of c.s.a.a and increasing readability of the document.

Kevin Savetz
savetz@northcoast.com

** Guidelines to posting to comp.sys.atari.announce **

comp.sys.atari.announce is a moderated newsgroup. In order to be approved, posts must offer news relevant to Atari computer users.

What kinds of posts will be approved?
* Relevant to Atari computers: 8-bit, ST/TT/Falcon, Portfolio, Atari PC clones, or clones of Atari computers.
* Topics may include software, hardware, Web sites and other Internet resources, events and other news relevant to Atari users.
* Commercial posts and press releases are acceptable.

What kinds of posts will not be approved?
* Any post that is not relevant to Atari computer users.
* For sale posts are generally not approved unless they come from a developer or dealer that wishes to announce new pricing or product. Sale or auction announcements from end users will not be approved unless they are, for some reason, extraordinary.
* Posts that are not informative.
* Posts that are not in English.
* Posts that aren't reasonably understandable (due to, for instance,

significant grammar problems or spelling mistakes.)

How do I post a message?
* Simply use your newsreader to post your message to comp.sys.atari.announce.
* You may cross-post to other, relevant newsgroups.
* Alternatively, you may e-mail your post to csaa@savetz.com
* Your post will be reviewed by the moderator, usually within 24 hours. If accepted, it will then be posted to the newsgroup. If it is rejected, you will receive an explanation via e-mail.

How do I follow up to announcements?
* Followups to c.s.a.a announcements should be posted to a relevant Atari discussion group such as comp.sys.atari.8bit or comp.sys.atari.st. Followups should not be posted to c.s.a.a.

For your reference, below are the original posting guidelines that are being replaced.

*** begin old guidelines ***
Guidelines to posting to comp.sys.atari.announce

if you have any questions or comments/suggestions
please respond to myself or reply.

This file should assist users who wish to post to comp.sys.atari.announce
and are not exactly sure if it will be approved:

When posting to comp.sys.atari.announce please make sure of the following:
* post about atari computer relevant topics
* please include an explanation to what the package/machine is in the post
* the post should be at least 10 lines long (message content)
* it should be informative

* What kinds of posts will not be approved?
Any post that is not relevant to atari computers (8-bit, 16bit/clones) will most likely not be approved.

Details are in the charter, in general posts that sound like "there are some news, please contact me" without any information on the product in question will be rejected. Posts that appear to have a lot of spelling mistakes will most likely also be rejected (such as fairly obvious grammer and spelling errors). Posts are expected to be in english, if they are in another language then a translation would be nice, its hard to approve anything that one can't read.

*Can I post forsale posts?
Forsale hardware posts are generally not approved unless they come from a company/developer or dealer who wishes to announce new pricing for product.

Comp.sys.atari.announce is not atari.marketplace (doesn't exist however).

* Justification/Charter
Please read the RFD, this should clarify a lot of questions, if you have any more questions please email me (ysiu@lexicor.com)

Original Request for Discussion: comp.sys.atari.announce

by: Yat Siu (Lexicor@world.std.com)

Group name: comp.sys.atari.announce
Status: moderated (Lexicor@world.std.com)
Distribution: world-wide
Summary: a newsgroup for the product announcement of atari computer hard and software or related (eg. clones).

Justification:

There are currently comp.sys.atari.st, comp.sys.atari.st.tech, comp.sys.atari.8bit and comp.sys.atari.advocacy, the first three groups are discussion forums for their (specific) related hard and software. Product announcements in these discussion forums of new releases by either commercial, shareware groups can often be considered a service but not encouraged. The atari computer market is not very widely distributed and it is getting increasingly harder to know more about new products.

To begin with a product announcement group would encourage the people to announce their new products for the benefit of all atari computer users. It will also allow the reader to focus for a new newsgroup only for product announcements or press releases and will also make the reader more aware of his/her options.

Charter:

The proposed group will provide a forum for the announcement and release of new atari related products:

* atari computer hard and soft
* commercial as well as shareware or related
* announcement from individual authors, companies or distributors
* press releases

NOTE

This RFD is being issued in concordance with the guidelines set in the "How to create a new usenet newsgroup" FAQ regularly posted to news.announce.newgroups. Please refer to this article if you have any questions about the newsgroup creation.

Unless the discussion indicated a need to resubmit a new RFD, the CFV will be posted approximately three to four weeks after the posting of this RFD.

This RFD was (cross)-posted to the following groups:
news.announce.newgroups, news.groups, comp.sys.atari.st, comp.sys.atari.8bit
*** end old guidelines ***

I have created an archive of comp.sys.atari.announce posts. The Web
page is updated daily and will contain a complete archive of posts
since the newsgroup's relaunch in mid-April.

XL Search now includes an index of the over 1,600 files stored at the
Digital Antic Project:

  http://www.atarimagazines.com/

As well as an index of Andre MacFalkner's Atari 8-bit Projects:

  http://members.aol.com/macfalkner/

Also, as of last month, XL Search's "New Stuff" button actually shows new
stuff... rather than showing things that were added in the last 7 days
(which didn't make sense since XL Search's index is typically updated once
a month, or less often).

Enjoy the over 17,000 files listed:

  http://www.newbreedsoftware.com/xlsearch/

And if you have an FTP or website, or know of one, that isn't listed at
XL Search, please help me add it!

Hi all!

Thought I'd make use of this Newsgroup to announce that my Website has
been updated again.

New in my Atari downloads page I've added the new versions of StiNG, mICQ
for STiK/StiNG, and v0.99 of AtarIRC.

Also I have still available the classic demos Sonoluminesenz and The Lost
Blubb for the Falcon, plus a few newer demos, for the ST and Falcon.

The site was designed using the recent release of Web Wizard, by Cadenza
Software, no Microsoft here! :)

The address of my Atari page is:

http://www.users.zetnet.co.uk/jfhaslam/atari.htm

Cheers!

James

A new site has been established for 6502 microprocessor enthusiasts.

http://www.6502.org

Here you can find links to homebuilt 6502 computers on the web, datasheets for almost every 65xx series chip, software, articles, and much more. It's a new site and
we need your support and feedback, so please visit it and let us know what you think.

Agenda for the May 19th, 1999 Toronto Atari Federation meeting:

First, it's time once again for the annual TAF Executive Elections! If you like what the club is doing, or want to see a change in how it's being run, then by all means come in and let your voice be heard! This is the executive you'll be bringing in to the next millenium....

Then, we'll be looking at how to improve the efficiency of your PC computer - by installing an Atari emulator and running your favorite ST applications on it! We'll be looking at GEMulator, TOSBox, PacifiST and other popular ST emulators, running on both a PC laptop and on our PHOENIX editor's PC tower! Learn about how well the various emulators run, the advantages, the pitfalls, the issues on emulation - and what does and doesn't run. Needless to say, this seminar will also allow you to run your programs well into the millenium as well.

It'll be an exciting night, to say the least. See you there!

TORONTO ATARI FEDERATION meetings are held on the third Wednsday of the month from Sept-June in the "Gold Room" of the North York Memorial Hall located in the lower or concourse level of the North York City Centre Library Building at 5110 Yonge Street (next to Mel Lastman Square) at Parkholme Avenue. Those coming by public transport can take the TTC Yonge Line north to North York Centre Station. $2 for non-members. Dues are $25 per year, and includes a subscription to the newsletter PHOENIX. Membership in TAF IS Atari support!

The once commercial software, "A Day at the Races" (ADAR), for the Atari ST has been released as shareware. This includes its companion program called "A Day at the Races Companion" (ADARC).

ADAR is a simulation of the horse racing environment. ADARC is a program which adds more functionality to ADAR.

These programs run properly on the Atari ST, Ste, and STfm. There have been success stories of these programs running on an F030 with the use of Backward or Magi. I haven't been able to try these programs on any non-Atari TOS machines. If someone does please let me know if they work or not. Thanks.

You can find out more about these programs at:
http://melake.erols.com/~atari

You can download the programs at:
http://melake.erols.com/~atari
or
ftp://melake.erols.com/pub/Atari

These are rather slow connections to the Net. The programs should also be available on Atari ftp sites.

These files are also available via ftpmail where the files are emailed to you. To find out more about ftpmail send an email to:
ftpmail@melake.erols.com
and include this one line in the body of the message:
help

Feel free to email me if you have any questions or comments.

Final beta test versions of Ape '98 and Prosystem '98 are now
 available for registered users of APE. A few of the new features
 in APE '98 vs. the dos version are:

Excellent stability under even the heaviest system loads, runs as a
 real windows device driver in the background. No more sputtering
 or timeouts when running programs.

Runs in the system tray and uses 0% of the CPU when idle, even on a
 486 system. Does not use more than 3-4% of available CPU time even
 when loading from the Atari at highest possible speed.

8 independany PC-MIRROR drives, as well as the complete big disk support
 your used to in APE. Each independant PC-MIRROR drive can also act as
 an independant APELOADER drive if your OS supports booting from drives
 other than drive 1.

A file browser with built-in support for viewing the complete directory
 tree of any Atari/Mydos or Spartados image, and extracting files.

Advanced printer support. Print from your Atari to any windows printer
 driver, using truetype fonts, direct to the pc printer port, to a file,
 or to a print monitor window.

Plus many other new features like the nice GUI and ease of use. Check it out
 if you have Windows and are using APE.

The prosystem has been completely rewritten and includes batch support
 of 1-4 drives for every operation. Need to image a bunch of disks? Just
 hook four drives upto your Prosystem interface and press start. Need
 to format a box of disks? how about formatting all 4 drives at once
 to make things easier and faster?

To get your beta copy just e-mail me with your registration information
 and I will send you the dpownload URL and password. Any information
 regarding bugs or new features would be greatly appriciated.

Thanks

Steve

You're probably familiar with my "XL Search" site:

  http://xlsearch.atari.org/

Well, if you have a website or FTP site that contains files you'd like
indexed there, please contact me! I've now released a version of
"makeqif", an automated Unix program that creates an index suitable
for XL Search.

  bill@newbreedsoftware.com

Thanks!

AtarIRC V1.00

The STiK IRC client AtarIRC by Lonny Pursell has been updated to v1.00.
The main additions are: Improved DCC send (called fast DCC protocol,
compatible with all other clients) for better transfer rates, an auto
away timer which will mark you as away on the server if you leave your
client idle too long (no keyboard input). Some bugs have been fixed as
well.

Class 4 are producing a new batch of the CenturboII Revision B
accelerator boards for the Atari Falcon.

If you'd like to order or reserve one make sure you get in quick as
these will sell out fast. Another production run isn't expected for
several months due to the forthcoming Phenix 060 computer. Follow the
link below for ordering information.

Aniplayer 2.06 Released

Aniplayer, a media player, has been updated and again comes with a lot
of new enhancements. There are now display and sound configuration
boxes, a cool new 160*240 Falcon screenmode, better Milan Blaster
support (CD frequency), Mpeg 2 bugfix and more. Aniplayer is shareware.

Cyril Cogordan has released an "Atari to BMP" picture converter. This
small application for PCs lets you convert most popular Atari 16-bit
image files into BMP files.

It currently supports PI1, PI2, PI3, PC1, PC2, PC3, Neochrome (Low,
Medium and High Res) and Spectrum 512 (SPU). Future versions will
support more formats but send the author your support to make this
happen.

You can get it from the official web site Epsilon (see link below) or
download it from the Atari.Org FTP Server at ftp.atari.org in the
/pub/toys folder. Filename: a2b_042a.zip - 18k ZIP file

6. GENERAL RULES AT THE SHOW
7. WHY SHOULD I ATTEND NAS?
8. HOW YOU CAN FIND OUT MORE

Dear Atari friends, now it is only a week to NAS99.

It's once again time for the Nordic Atari Show, the annual get together which has rapidly become a fixture for all Atari users.

We arrange the show for the fifth straight year we hope to fulfill everyone's expectations and that this will result in the best possible atmosphere.

In den letzten 5 Jahren ist die Nordic Atari Show zu einem festen Event in der TOS-Szene herangereift, der mit jedem Mal besser besucht wird. Austragungsort sind die R�umlichkeiten des Guttempler-Ordens G�teborg in Schweden. Veranstalter ist die Swedish Atari User Association. Gesucht werden weiterhin Atari-User, die Vortr�ge zu bestimmten Themen halten m�chten.

1 - WHEN AND WHERE?

This year the show will begin on Friday, June 11 and end on Sunday, June 13. This is the weekend following the beginning of the summer school holidays as well as the weekend prior to the Swedish Midsummer celebrations. We'll open at 10 p.m. on Friday and close at 6 p.m. on Sunday.

NAS99 will be hosted at the IOGT-NTO (International Organization of Good Templars) quaters located in Gothenburg and between two places called J�rntorget and Masthuggstorget, just where the Stena Line ferries goes towards Denmark.

A map for the route description at http://www.sak.nu/nas/find.html

2 - WHAT WILL IT COST?

If you intend to attend all three days, you cheapest solution is the Three Day Pass otherwise a Single Entry ticket will do:

* Three Day Pass ... SEK 100:-
* Single Entry ..... SEK 60:-

These prices include full access to all the activities being held during NAS99.

3 - EXHIBITION

The exhibition hall is open:
Friday 11-20, Saturday 11-20 and Sunday 11-18.

At the exhibition you can see:

16/32 systems (England)
Nic Harlow has always been at NAS, so why any different this year?
He's sells CD:s for Atari, games and more.

SAK and SAK/Skane
The Swedish Atari Users' Association and the local department in Skane are here too, to show different programs and computer systems in action.

Jesper Br�nnmark demostrates how a Atari ST can drive a lightshow with spotlights through the MIDI-ports for concerts or theatres. He also have compiled a GEM app called Moment that makes this possible.

Johan Klockars demostrates Eclipse with fVDI.

Daniel Hedberg and Thomas Bergstr�m shows FlexTrax and Willies Adventures

4 - SEMINARS

Last years wide-screen seminars were very much appreciated, something of which we naturally have taken notice.

The SEMINARS will be held from 13 p.m. on Saturday

- Erik H�ll the author of MyMAIL describes the ethernet network part on NAS, how the computers are connected and the system software running, such as the Apache server installed on a Hades.

- Jonas M�ller Nielsen about MiNT/MiNTnet

- Kenneth Medin describes how his sub-net with Atari TT030 and Mega STe are serial connected to the main network.

  Martin-Eric Racine will cooperate and show how he connected his TT030, iMac and Stacy to the network as well.

5 - MORE ACTIVITIES

* A very large ethernet network called Erika will be set up with several Hades machines,
SUN workstations and Linux platforms. A apache server is installed in one of the Hades machines with a Internet gate.
Two sub-nets called Pia and Sanna with a TT030s, Mega Ste, iMac and Stacy also connected.

* There will be a possibilty for you that can not show up at NAS, to surf the

ethernet at NAS in real-time thanks to a Apache webserver installed on a Hades machine 1800-2100 Swedish time, more of this and the IP-adress to use, will be spread.

* Sadly Centek couldn't attend, their prototype R1 of the Phenix is not ready to show up at this time and they have important orders due september. Neither did I manage to get my grips on a MagiC Milan.

* A refreshment stand will sell non-alcoholic drinks, sweets, chips, etc.

6 - GENERAL RULES AT THE SHOW

* No smoking inside the building or by windows and doors.

* No alcohol, beer or anything like drugs will be tolerated inside the show. Please have fun with that outside in the city, but not at NAS99. All such things found will be confiscated, we are at IOGT-NTO as well.

* Keep a good attitude against other people and show your tickets to the staff if asked for it.

7 - WHY SHOULD I ATTEND NAS?

The Atari market now contains better apps and system software then ever before. We have seen that the TOS-compatible machines Hades and Milan actually was successful..

We think that you care about the TOS platform and that you will visit us not only to walk around but share your experience with us. If you are from the Scandinavian regions then concider that NAS is the only Atari show this year in Northern Europe.

NAS is for all of us a opportunity to gather, together for a few days and let us know each other in person then electonically.

8 - HOW CAN I FIND OUT MORE?

Information will be distributed regularly in the same way as this text file. In addition, we have a number of other sources of information where you can find out more about the show depending on your own resources.

* Our home page on the World Wide Web. This has been in existence since last two years and we'll try to update it as often as the information comes. The home page will contain more detailed information concerning times, schedule of events, directions on how to get there, competitions and housing.

The addresses are http://www.sak.nu/nas and http://www.sak.nu

* STraight BBS. This is the Swedish Atari Club's home BBS. Information
  concerning NAS will be included in the SAK menu. You can also use this
  BBS to ask any questions you may have. The telephone number is:
  +46 (0)31-336 39 73.

* The first issue this year of our club magazine "Atarimagasinet", will be
  released at the show.

* Our show co-ordinator is this year as well as last year, Mille Babic.
  He's supposed to know everything there is to know about NAS99.
  If you have questions to which you've been
  unable to get answers anywhere else you can send us a message at
  nas@goteborg.utfors.se or to Mille at mille@atari.org

  All members 1997- alreday got welcome info about NAS through
  snailmail. You can also read this on-line (in swedish)
  at http://www.sak.nu/nas/utskick.html

  KEEP THE TOS PLATFORM ALIVE.
  WE ARE LOOKING FORWARD TO SEE YOU AT THE NORDIC ATARI SHOW 1999!

  Best Regards

  Mille Babic

V-Trax is an Audio Editing Station for the Atari Falcon 030 which works
on a 32000 Timeline.

It has independant management of Audio Input (8 in the Falcon version).
Audio Output on mixing table 8 Input by 2 Output. Possibility to output
up to 8 tracks for an external mixer. Simultaneous playing and
recording in full duplex.

I have now scanned a few British Atari-related magazine ads from the early
80's. These are available on the DGS Website now (via the 'Pictures and
Scans' option). More of these are to follow. I've got loads of them, it's
just a matter of finding the time to scan them all!

This is what we now have available on the website (and it it's all free of
course!):

* Our main PD/Commercial software catalogue
* Latest list of used hardware/software/books/mags we have for sale
* List of PC CD-ROMs we have left which need clearing out
* Free demos of the Quick programming language and Digi-Studio to download
* 17 articles written by me and originally published in the Atari 8-bit
News-Paper and Page 6 magazine
* Photos from the 1990 and 1992 AMS shows held in the UK
* Cover scans of the early Page 6 issues including the very rare Issue 1
* Cover scans of all 5 issues of Atari UK's I/O magazine from the early
80's, including the rare Issue 1
* Cover scans of the Official Show Guides to the Spring and Autumn 1987
'Atari User Shows'
* A scanned article from I/O magazine about how Atari got its name
* A cover scan of an old Silica Shop catalogue from 1987

* A few British Atari-related ads from the early 80's
* Cover scan of Issue 1 of the UK's 'Monitor' magazine

More stuff will be added quite regularly, so make sure you come by from time-to-time.

The site now uses frames (only 2 to be exact!) so it may take a while to start up on some machines/browsers. Be patient!

Don't forget that DGS still support the Atari 8-bit with a wide range of PD and exclusive Commercial software. Full details are in the catalogue on the website.

All you need now is the address, which is: http://www.dgs.clara.net

Please stop by and take a look!

Agenda for the June 16th, 1999 meeting of the Toronto Atari Federation:

As your classic Atari ST/TT/Falcon gets older, you may find that certain parts of your system may need replacing. Is your mouse getting tired? Has your mono monitor faded to black? Has your SH hard drive spun down for the last time? Where am I going to find replacements?

At this particular meeting you'll find the perfect solution to these questions, as we'll be showing off and doing demoes of three products done by the young New Zealand genius Mario Becroft that solves these problems nicely!

Astound! at the sight of attaching a PC three-button mouse to your ST via

the Mouse Adaptor and make it perform double-clicks with one click of the central button! (Also makes a great gift for Amiga users!) Thrill! at getting a nice clear SVGA monitor screen via the VGA Adaptor - mere plug & play! AND! Prepare for the biggest surprise as we show you how to put a notebook IDE drive INSIDE your ST/STe's case via the new IDE Adaptor (which also opens some interesting possibilities - how about putting an iMation SuperDrive inside your ST for starters?)

If you've been worried about replacing mice, monitors or hard drives, this meeting is a MUST-ATTEND spectacle of technological marvel! See you there!

TORONTO ATARI FEDERATION meetings are held on the third Wednsday of the month from Sept-June in the "Gold Room" of the North York Memorial Hall located in the lower or concourse level of the North York City Centre Library Building at 5110 Yonge Street (next to Mel Lastman Square) at Parkholme Avenue. Those coming by public transport can take the TTC Yonge Line north to North York Centre Station. $2 for non-members. Dues are $25 per year, and includes a subscription to the newsletter PHOENIX. Membership in TAF IS Atari support!

TPUG AND TAF JOIN FORCES FOR A DAY OF EXCITING BARGAINS IN TORONTO!

The Toronto Pet Users Group (THE support group for users of Commodore's PET, VIC 10/20, 64 and 128, and the Amiga) and Toronto Atari Federation (North America's largest user group for the Atari enthusiast) are holding a joint Flea Market at the Alderwood United Church, 44 Delma Drive in Toronto, Ontario,

Canada on Saturday June 19th from 11:00 a.m. until 3:00 p.m. If you own any of these classic computer systems and have been looking for hardware or software, or you have systems or software that you'd like to sell, now's your chance. Sell your old stuff, go home with a treasure!

The days of rivalry between the two competing systems are over, and users of both these platforms realize that it is better to cooperate rather than to butt heads. And indeed, with the Amiga's strengths in audio and graphics, and the ST/TT/Falcon's strengths in MIDI and DTP (not to mention the fact that both platforms make excellent and cheap machines for getting on and making use of the Internet) there is much that can be learned and shared between the two platforms by their respective users.

TAF will be there with copies of ST+ Fanzine for sale and with a number of Mario Becroft's excellent new products for adapting PC serial mice, VGA/SVGA adaptors and internal IDE drives to Atari STs (the Mouse Adaptor also works with the Amiga, so if you've got an Amiga with a dying mouse here's your chance to use one of the many excellent two and three-button mice available to the PC with your system), as well as info on how to join TAF.

It's going to be an exciting summer - and this will be the event to kick it off! See you there!

TORONTO ATARI FEDERATION meetings are held on the third Wednsday of the month from Sept-June in the "Gold Room" of the North York Memorial Hall located in the lower or concourse level of the North York City Centre Library Building at 5110 Yonge Street (next to Mel Lastman Square) at Parkholme Avenue. Jindrich Kubec <kubecj@asw.cz> has released ACVT. It's replacement for all
those DCM2ATR, XFD2ATR, ATR2XFD, etc. programs. This PC DOS program can
convert between four well know Atari formats: ATR, XFD, DCM and SCP.
It also can repair some broken ATR/XFD images.

Converts between four basic image formats:
ATR - SIO2PC images
XFD - XFormer images
DCM - DiskCommunicator images
SCP - SpartaDos SCOPY images

It's an alternative to Steven Tucker's Imagic.
The auther says is it better because:
1) It's free. The whole package is placed under the GNU Public License.
2) It comes with source.
3) It could be ported to another architectures.
4) Contains less bugs. (Hope so.)
5) Can repair some invalid images.

It can be found at http://www.asw.cz/~kubecj

PARCCP by Petr Stehlik is a program to transfer files via the parallel
port. A version for the PC exists as well making PARCCP a very useful
utility for Atari - PC data exchange. In this release the case

sensitivity has been reworked. Some bugfixes and misc changes have been
made as well.

The current competition is to create the best possible song with the
Sid Sound Designer v3.5p chipmusic editor (works with ST, STe, Falcon
(perhaps TT as well?)). The competition is open for everyone.

As with the last nonmusican modcompo, and with the 4colour graphic
compo, there is a limit: You can only use the supplied voiceset with
instruments. There are a variaty of sounds, but not too many.

For the rules and downloads, see the link below.

Hans Reutter <hansre@microsoft.com> has received permission to make
issues of A.N.A.L.O.G. magazine available on the Web. The Digital
A.N.A.L.O.G. Archive is the result. Currently, only one issue is
available, but more will be added in coming weeks. Full text and
images from the magazine are available.

A.N.A.L.O.G. was one of the earliest (and best) Atari-oriented
magazines, which was first published in 1981.

Netbeat is the "Internet time" invented by Swatch, in which one day is
divided into 1000 "beats." Simon Lindauer has created a Netbeat clock
for the ST computers.

It is available at
http://www.atari-computer.de/xonline/files/netbeat.lzh

The author does not have e-mail address -- you can send any feedback,
suggestions etc. to thex@atari.org, who will forward comments to him.

Paral is a run-time GEM debugger by Andreas B�r.

It can debug nearly all programs running under MiNT. It supports
the MiNT trace commands, debugs programs from /proc, displays
and saves the disassemblings etc.

You can find a first version at:
http://www.franken.de/users/asrael/

The COmmunication MAnager by Softb�r has been updated to version 5.0.0.
New in this release is the support for the Elsa MircoLink Office Self-Mode.

There have also been some changes in the USR Self-Mode, misc additions
and bug fixes.

XL Search, the Atari 8-bit FTP and Website search engine, has been
expanded to include "Jindroush's Atari Software," at
http://www.asw.cz/~kubecj/asoft.htm

You can access XL Search via the web at:

  http://xlsearch.atari.org/

    (which is simply a redirect to the actual site):

  http://www.newbreedsoftware.com/xlsearch/

Or via e-mail, by sending a blank message to:

  xlsearch@newbreedsoftware.com

XL Search now contains an index of 7 sites, totalling over 17,000 Atari
8-bit programs and files!

If you're site contains Atari 8-bit software or files, please take a moment
to find out how you can add it to XL Search!

Eureka is a 2D Graph Describer and a 3D Modeller.

It generates many 2D and 3D well known formats,
and now including POV 3.1 scripts. POV 3.1
makes very easy modeling of 3D math shapes,
and produces very compact script files.
Some examples can be found at http://eureka.atari.org/vrml

Eureka 2.12 home page is at http://eureka.atari.org

Toys have just coded DB Phone Home, a Super Mario Clone in only 4kb.
Probably we will see some other small games during the
development of their big Grubs project. DB Phone Home
should work on every Falcon with 4MB RAM RGB/TV/VGA.

MacFalkner (MacFalk2@aol.com) has announced availability of
a professionally made board for the Atari Keyboard Interface.

Features include:
- connects any standard PC keyboard with your ATARI
- full plugable, only 4 soldering points needed (only if POKEY is socketed)
- option for a separate macro memory (up to 8Kbytes)
- output pin for switching several OS-Roms or Ramdisks
- the 'hanging key' software bug is removed

For some pictures and a description of the board see:
http://www.macfalkner.de

The STiK IRC client AtarIRC by Lonny Pursell has been updated to v1.01.
Some bugs related to MiNTnet IP masq'ing were fixed. Also the _SND
cookie is no longer checked when calling an external sound player. It's
up to the sound player to determine the sound hardware. This way if
you have an Atari clone and special sound hardware you can still use
the sound options.

hEARCoach, the shareware hearing trainer for ATARI GEM, has been updated to v0.96.

hEARCoach is a program that will help you improve your ability to recognize musical intervals and chords.

Updates include:
- Possibility to answer by MIDI-in
- Chord support for internal sound
- AP_TERM, GLOBAL WINDOW CYCLING
- Bugfixes

Greg Goodwin has updated his list of Atari 8-bit and ST BBSs. It lists 39
bulletin boards in the U.S. and other countries, 18 of them
"with a definite pulse."

MesaGL, a free clone of OpenGL, is available with
TOS systems. It was compiled by Olivier Landemarre.
MesaGL can be found at:
http://www-air.inria.fr/~bereziat/Binary/Mesadev.lzh

It is a programming kit for GnuC and PureC. Actually,
the MesaGL lib is a LDG (a Gem Dynamical Library) so

it can be used by others languages than PureC/GnuC. More
informations about LDG are available at:
http://www-air.inria.fr/~bereziat/

Thanx for your attention.

OK, it isn't that new. I finished writing it 15 years ago. Even sold it
for a while, although it didn't sell a lot of copies. The 8-bit world was
on the way out in 1985. But I recently resurrected the compiler and its
development environment and have been having some fun enhancing some parts
of it. Real nostalgia trip since I spent a large chunk of my free time at
university developing this thing.

It compiles a unique BASIC dialect to a very fast p-code. The p-code
interpreter and the Control Program (i.e., DOS shell) live in XL's shadow
memory. The Control Program replaces DUP.SYS and provides a command line
interface much like OS/A+ and DOS/XL from OSS. It manages loading programs
(you can load multiple programs into memory at once) and libraries (modules
can share subroutines with multiple programs -- shared libraries on an 8-bit
computer!)

Anywho, if you want to check it out and play with it, check out my web page.
Goto http://www.jeff-jackson.com and click on ATARI. There's a ZIPped XFD
image of the object files and one of the source. I'd love to hear from
anyone who downloads it and plays with it some. While I'm still in this
nostalgic mood, I may even fix bugs and add enhancements for you.

You know, it boggles my mind, this is a complete development environment
release that fits on a 180KB disk. The C++ compiler and development
environment I'm about to release for the company I currently work for is
literally 1000 times bigger. And let's not even think about how big the
debugging version of said environment is. (Oh yeah, if you look at the
source, keep in mind I have 15 years of experience now, and my coding and
commenting style is much better now :-)

Hi Everyone,

   I've posted the first public release of Ape'98/ProSystem'98 at:

http://www.nacs.net/~classics/ape/download/ape98trial.exe

   There are no links to it on the web site yet, so this is the only
 way to download it. The download is approx 2mb, and requires you have
 Windows 95 or 98 installed.

   Ape'98 has been under construction seemingly forever :) I hope you
 find it useful.

Steve

We've added eight issues to the Digital Antic Project -- the full text
of 62 Antic issues are now online.

       November 1985 - Vol. 4 No. 7 - New Communications
       March 1987 - Vol. 5 No. 11 - Inside Today's Atari Corp.
       November 1987 - Vol. 6 No. 7 - The Winners
       June 1988 - Vol. 7 No. 2 - Power Up!
       July 1989 - Vol. 8 No. 3 - Atari Glyphics
       October 1988 - Vol. 7 No. 6 - Atari Grand Slam
       August 1989 - Vol. 8 No. 4 - Mapping the Atari Returns
       September 1989 - Vol. 8 No. 5 - Joystick Test Lab

In addition, there's a new section, "Where Are They Now?" Find
out what happened to your favorite Antic writers/editors/programmers.

Tom Hunt has released UnZIP 1.0 for the Atari 8-bit. It's been tested
with Sparta DOS 3.3a and MyDos 4.50. It supports deflate, the most
widely used compression method.

It is available from:

A nearly complete archive of newsletters from the
Old Hacker's Atari User Group is now available at
http://www.atariarchives.org/oldhackers/

The site contains downloadable versions of the
group's newsletter disks from 1990 through 2000.
Disks are available in ATR, DCM, and ZIP formats.
Each newsletter contains original articles plus a
selection of software.

Due to declining membership, The Ol' Hackers Atari
Users Group will close its doors after its final
meeting in December 2000, but the newsletter archive
will remain.

Newsgroups: comp.sys.atari.announce
X-Complaints-To: newsabuse@supernews.com

From: uz@musoftware.de (Ullrich von Bassewitz)

I'm proud to announce version 2.5 of CC65, a C crosscompiler /
crossassembler combo for 6502 systems.

CC65 has C and runtime library support for many of the old 6502 machines.
The libraries are fairly portable, so creating a version for other 6502s
shouldn't be too much work.

Here is a list of the compiler features:

* Includes a C compiler, macro assembler, archiver, linker, GEOS resource compiler and a frontend (compile & link) utility. The assembler generates relocatable object files, the linker is very configurable and allows overlays, ROMable code, split output and much more.

* The compiler is not quite ISO compatible, however, a large subset is supported.

* Supported target systems are:

  - C64
  - C128
  - C16, C116, Plus/4
  - CBM 600/700 family (programs run in bank 1)
  - Newer PET machines (not 2001)
- The Apple][(thanks to Kevin Ruland <kevin@rodin.wustl.edu>)
- The Atari 8 bit machines
- GEOS for the C64 and C128

  For all these systems a precompiled runtime and C library is available. Supporting more targets is not very difficult since the C library was written with portability in mind.

* Several system specific support routines like a conio library or modules for joystick access are available.

* The assembler and linker do also support the 65816 as a target, however, the compiler is not able to generate code for this CPU and there is no RTL support.

* Lots of docs and a few sample programs included.

* Easy interfacing between C code and assembler.

* Fullscreen debugger for most machines as a linkable module.

* Full sourcecode available as well as binaries for

- Linux (several RedHat RPMs)
    - DOS
- Windows 95/98/NT

What is new in this version:

* As usual many bugs fixed (and new ones introduced, so it does not get boring:-).

* New -j switch to make the default character signed. New #pragma to do
  the same.

* Slightly better code in some situations.

* A lot of new features for the assembler:

 - Unnamed labels
 - Several emulation features
 - Listing support
 - New builtin functions
 - Include file search path support

* The linker generates an imports list in the map file.

* Completely rewritten symbol table handling for the compiler.

* Lots of code cleanups. One result of this is that the -T option does
  now work without clobbering the output in some cases as it was
  before.

* Much more code is now shared between the tools.

* Experimental 65C02 support for the compiler.

* Support for the Atari 8 bit machines was contributed by the Atari team:

      Christian Groessler <cpg@aladdin.de>
 Mark Keates <markk@dendrite.co.uk>
 Freddy Offenga <F.Offenga@student.kun.nl>
 David Lloyd <dmlloyd@atari-central.com>

* It is now possible to write GEOS programs for the C64 and C128 using
  cc65, thanks to the GEOSLib library contributed by

       Maciej Witkowiak (YTM/Elysium) <ytm@friko.onet.pl>

* Documentation updates.

* More minor changes.

Support for some features is still missing. To name a few:

* No floats, no bit fields.

* No file routines on most systems. The 8 bit Ataris are the first
  machines that do have full file I/O support (besides the ACE port
  which was dropped some time ago). Please note that the complete CBM
  family doesn't have file I/O support!

* The 80 column mode on the C128 is not supported by the conio library.

More information:

For your convenience, I've put all doc files also on the web server:

    http://www.von-bassewitz.de/uz/cc65/doc/

The cc65 main page

    http://www.von-bassewitz.de/uz/cc65/

will get updated to reflect the new version in the next few days.

There is also a cc65 mailing list. To subscribe, send a mail to
majordomo@musoftware.de with the command

    subscribe cc65

in the body of the mail.

Available packages:

As usual I will provide the complete sources and several binary packages.
There are some binary RPMs for different versions of RedHat Linux, which
is probably one of the fastest ways to get going. Since Linux is also my
development platform, new features and bug fixes are first available for
Linux.

Binaries for DOS and and Windows will follow or may already be available
at the time you read this. While the sources do still compile under OS/2,
I have dropped support for OS/2 binaries, since were almost no downloads
of the OS/2 version.

Download:

For more information and links to the FTP server, see

      http://www.von-bassewitz.de/uz/cc65/

For direct download, use

        ftp://ftp.musoftware.de/pub/uz/cc65/

Thanks to all who sent feedback and suggestions!

From: Sidney Cadot <sidney@janis.pds.tudelft.nl>

Hi everybody,

I am happy to announce the availability of the Atari XL/XE ROM
reverse-engineered source code, rev. 2. This latest version uses the
CC65 compiler suite, which includes a blindingly fast macro-assembler
and linker. The packages comprises 7 source files (13887 lines of
assembly) that can be assembled and linked in 0.3 seconds (!) to yield
ATARIXL.ROM and ATARIBAS.ROM, as used in several emulators that are
available.

You may find the package on my Atari web-page at:

  http://ch.twi.tudelft.nl/~sidney/atari

I'd appreciate any comments you may have, and I would also like to
mention that I would welcome outside involvement for improving the
quality of the source-level comments in the code.

Best regards,

  Sidney Cadot

A new update of AtarICQ is available for download. Lots of
tweaks and small bugfixes have been made to the shell recently.

The overlay, AICQ.OVL by Dan Ackerman, has also been updated to
v 29. The search function now works very well, but there are
also 2 completely new functions availble.

                                    5 Aug 2000 23:32:04 GMT

It's hard for me to believe that the next president of the United
States will be George W. Bush or Al Gore. Both remind me of
Hollywood movies that have been focus-grouped to death: they
push all the appropriate buttons, but have zero original vision.
Both stand for the same thing: corporate-driven business as usual.

There must be some way outta here.

Ralph Nader is no joker or thief. I think he and the Greens could
give Al & George a good run for their money. At 65, Nader isn't
running as fast as he used to, and the Green Party doesn't exactly
have its platform figured out, but I think they have what it takes to
inject a dose of radical democracy into the race. Unlike the two
Tweedles, Nader is real, he stands for decency and common
sense and he still commands a lot of respect in progressive and
activist circles. And hidden behind the rainbow coalition of lefties,
eco-feminists and crazies, the Green Party does have some great
ideas. It's the only party that stands for the Tobin Tax, true cost

markets, media reform and putting corporations in their place.

In October, with a fired-up Nader hurling intelligent sound bites into the presidential debates, the whole game show might actually be worth watching. The alternative is the most sophomoric presidential race in American history . . . and the lowest voter turnout ever.

I'm putting a GO GREEN - VOTE NADER graphic at the end of all my emails from now on. I'm betting that, between now and November, the American people will wake up to the fact that their sacred democratic experiment has now degenerated into a choice between a corporate-sponsored Republican and a corporate-sponsored Democrat.

In these heady post-WTO days, a sudden, massive protest vote against Al & George is entirely possible and Nader would be the most apparent heir. With perhaps less than 25 percent of the people voting, an inspired Nader campaign could grab a surprising share of the action. And even if he does not come close to winning, at least imagine how his campaign might pull together some of the fired-up, post-WTO forces and lay the groundwork for something really visionary in 2004.

Download the graphics and help launch an email pyramid scheme to dump the Tweedles! Two formats are available, a magazine sticker (17K) or a Banner ad (5K):

==========

What it Means to be Green

"At the root of all Green political action is nonviolence, starting with how we live our lives, taking small, unilateral steps toward peace in everything we do. Green politics requires us to be both tender and subversive. Affirming tenderness as a political value is already subversive. In Green politics, we practice tenderness in relations with others; in caring for ideas, art, language, and culture; and in cherishing and protecting the Earth. To think Green is to build solidarity with those working for social justice and human rights everywhere, not bound by ideologies."

-Petra Kelly

A new ethernet adapter for all ST, STe, TT and Falcon computer
is now on sale. The adapter consists of two modules: First a
cartridge-based bridge to which you connect the second module,
a pocket ethernet adapter.

I've uploaded some info about GSXB (a "Generic Sound XBIOS" patch, that
together with a driver, adds sound XBIOS compatibility to any Atari
or Atari clone computers) to my page (see sig). At the moment
this is only useful to Hades owners. As soon as I get the ES1371 driver to
work on Milan, I'll upload a Milan version of it. GSXB itself will run on
any machine, but that is pointless without any drivers.

Just uploaded to Funet and lip6: my port of K9, a very simple NTP
client. This allows for easy synchronisation with any server that
sends NTP broadcasts.

Because NTP works in UTC and alters the RTC time, one must also
run their MiNT setup in UTC mode (see tzinit manual).

Sadly, this puts MiNT behind Linux, in terms of flexibility:

Linux can run in RTC=localtime and still use NTP, while MiNT does
not currently know how to offset from UTC back to localtime, at
the application level.

Still, if you don't mind running everything in UTC, this little
time client works very well. Enjoy!

A new version of AtarICQ and the overlay has been released.
In this release it is finally possible to create a new ICQ-account
from within AtarICQ. AtarICQ changes status from alpha to beta.

   I've heard the annual sale and swap meeting of the Columbus, Ohio, Atari club will be taking place on Saturday, September 9th. Here are some details I've heard about this event:

   Time: 9 am to 3 pm (Eastern Daylight Time)

   Place: Oakland Park Community Center, 980 Lenore Street.

   Location: Use East North Broadway or Cooke Road exits of I-71, northeast side of Columbus.

   Admission: $4 per person. (Maximum $8 per family.)

Ripped-Off are proud to announce that they now have the first installment of their emulation compatibility database online. This database is fully searchable & lists (almost) every demo (around 900) on every Ripped-Off Demo CD ever produced (133 disks.) It also contains info on who released the demo & its real ST requirements. This first release contains compatibilty with Pacifist .48, but Winston .3 testing is almost complete.

Some new releases on the STinG page include a new
STinG module, Drac_Emu.Stx, which emulates the
Draconis API so that client programs using this
can now work under STinG. All known clients work
with it, although some few have problems which
may either be due to bugs in them, or due to the
emulator.

We've added the full text of eight issues of Antic magazine to
the Digital Antic Project. Here are the latest additions:

July 1983 - Vol. 2 No. 4 - Computing: the New Adventure
September 1986 - Vol. 5 No. 5 - Weather
February 1987 - Vol. 5 No. 10 - Word Processing
March 1988 - Vol. 6 No. 11 - Video Game Shootout
July 1988 - Vol. 7 No. 3 - Newsroom Comes To Atari
June 1989 - Vol. 8 No. 2 - Diamond Cartridge
October/November 1989 - Vol. 8 No. 6 - Money Magic!
February/March 1990 - Vol. 8 No. 8 - Atari Recorder

Our next project will be to get the full text of STart magazine online:
if you're an ST lover with a scanner, OCR software, and some time to spare,
you can help. Send e-mail to savetz@northcoast.com.

I also need to find someone with an expertise in ST file munging and the
ability to move STart disk files from old ST disks to the Internet.

Are you dissappointed by the little information
that is available on the net about the two latest
Falcon030 hardware developments, the PowerPC
accelerator Tempest or the PCI-Interface Eclipse?

No need to be dissappointed anymore. There are
pages about all the Fmax-projects by Cortex Design
and Istari Software available now, featuring
everything Oliver Heun could squeeze out of the developers,
preliminary benchmarks, specs and technical data.

Newsgroups: comp.sys.atari.announce
X-Complaints-To: newsabuse@supernews.com

Anodyne Software has released ExtenDOS Gold v3.3,
a CD and CD-R driver package. Major improvements include:

 * support for accessing audio CD tracks as WAV files: audio
   CD tracks appear as WAV files to the operating system, and
   can be copied using any standard copying method such as the desktop

 * support for the SCSIDRV interface: ExtenDOS Gold (and therefore
   CD Writer Suite - see below) can use SCSI CD-ROMs and CD
   recorders on any system which has a SCSIDRV driver installed,
   including MagicMac, MagicPC, and Atari compatibles running HDDRIVER

 * support for ATAPI/IDE via SCSIDRV: ATAPI/IDE CD-ROMs and CD
   recorders can be used on systems with an IDE interface and

   appropriate SCSIDRV support

 * enhancements to the included audio CD player, including an
   improved user interface

Existing owners of ExtenDOS Gold can update to v3.3 at no cost.

CD Writer Suite v3.0 is Anodyne Software's CD recording package.
It includes three programs:
 * CDWriter 2: create audio CDs that can be played back on a standard
   audio CD player or on your CD-ROM drive
 * CDbackup: back up hard disk partitions to data CDs
 * CD InScriptOr: create standard ISO9660 CDs that can be read on
   almost any system, including TOS, MagiC, Windows and Linux

For further information on ExtenDOS Gold v3.3 and CD Writer
Suite v3.0, visit:

StGhost and Splash of Sector One has made a new major upgrade
to FalcAMP. It can now stream mpeg-music from internet and play
it in realtime.

Works with any Falcon030, stock or with accelerator cards.
(CT1,CT2,Nemesis and AB040 all tested and known to work).
Also supports optional external audio clock. Requires a STiK
compatible TCP/IP stack for internet radio use. (STiK/STiNG,GlueSTiK)

The Digital Antic Project (http://www.atarimagazines.com) is proud to
announce that the full text of every issue of Antic Magazine is now
available on the Web. Devoted to the Atari 8-bit and ST computers, Antic
magazine published 88 issues from April 1982 through July 1990.

This site launched with two issues on July 27, 1996. More than four
years later, the project's volunteers uploaded the final issue. The site
includes 1,700 articles, 2,400 images, and 1,600 downloadable program
files, using more than 100 MB of disk space. More than 30 volunteers
have contributed time to the project.

Although the Digital Antic Project has reached an important milestone,
the effort is far from over. The volunteers have already begun
digitizing two more magazines published by Antic Publishing: STart,
which focuses on Atari ST computers; and Antic Amiga Plus, which focuses
on the Amiga platform. (People interested in donating time or magazines
to the cause are encouraged to send e-mail to savetz@northcoast.com.)

Bodo Wenzel announced on the ATOS site the release of his program
STemBoy, a Game Boy emulator for the ST. It's an open source GPL
project.

Version 0.9 of FlexTrax, a soundtracker for Atari Falcon030 compatible
computers has been released.

Version 0.9 has support for both the AVR and WAV sample formats and the
sample editor has been greatly improved. FlexTrax supports the standard
MOD file format (up to eight channels) for compatibility reasons but
also features a new enhanced module format FLX. The FLX format is an
extended version of the standard MOD file format with support for
real-time sound effects like reverb and delay.

STiK2 and its source have been released under GPL.

It can be found at http://www.netset.com/~baldrick/stik2.html

STiK2 is the successor to STiK. Over several years a lot of
programmers have worked on it and many changes have been made. I
personally finally found the time to get the GPL notification added to
the source. STiK2 has been tested under the major OSes Aeses and
emulators for the Atari.

For more information go to the STiK2 page.

Tetrax, a new MOD player, has been released. It does its sound output
cleanly by using the operating system (XBIOS) and so should also run on
Milan and Hades with a soundcard. It has been tested with Milanblaser
and ES1371 PCI soundcards. There is still a bug inside so that it does
not yet run with Magic, but MiNT+N.AES or SingleTOS work fine.

According to a statement on the Milan Computer
homepage, the development of the Milan II
has been discontinued because one highly
relevant custom-chip, deeply integrated in the
motherboard-design of the Milan II, is not being
produced against all expectations.

Currently it is not decided yet wether to continue
and develop a new board design or to focus on
porting the MilanOS to other platforms.

The statement being referred to is currently only
available in German.

AtarICQ 0.145 is a "rather massive update, containing both a vastly
improved interface as well as native support for MiNTnet."

NED PLAYER is now the only one sound player on ATARI scene that can play
ADPCM packed files directly from disc. And more it is even possible to do
this on a slow 8Mhz STE. Standard (STE/TT/FALCON) version and FALCON only
version are available at new address: http://new-design.atari.org. Please
change your links!

Alert Help has been updated to version 2.2: Improvements include iconify

support, a GEMScript bug fix and few cosmetic changes. The program now
uses faceVALUE3.

Source codes for Alert Help, NervBox, Equation Calculation and Lotto
have been released. Please note that only the "USERWORK" part (and the
HRD/FVC file) of the source is included so you will need faceVALUE 3 to
generate a working GFA file.

Hi,

First of all this is not my account, please reply all mail to:
Joost.vanderleij@phil.ruu.nl

Secondly, I have decided because of the fact that I have totally rewritten our game routines, I will make the source code of Ufo War available. If you want the code please register Ufo War for $20,- and I will not only send you the complete game, but also the source code. Nota Bene: Ufo War is Falcon030 only, so some parts of the code will not work at other computers. The coding was done rough with minimal remarks and no opt. You will not get the music or graphic files, so you will not be able to put your own Ufo War together. The code will however show how to make sprites with 8 bitplanes, read joysticks, save and restore background etc.

Please register by:

PROCESSOR DIRECT
Advertiser Information

Public Release

Released July 28, 1994
For Immediate Release

Processor Direct's second issue is on the way. Unfortunately, we have had to do some minor cut backs in the way of printing to make the numbers more realistic. Instead of printing at a larger "tabloid" type size, we are now printing at the more standard 8.5"x11". To make this up to our readers we are also including color pages inside the magazine and are printing the entire magazine on gloss paper.

To those who sent in ads prior to this change, do not worry, your applications will still be honored at the sizes and prices listed in the June 8, 1994 (revision D) Media Package, and as a side effect you are now getting more ad space for less money. Hopefully this will

make up for any potential inconvenience.

Ad Rates:

	Price		(Display) in inches	
Ad Type	B/W	Color	Width	Height
Quarter Page	$86.44	$138.30	3.65"	4.78"
Half Page	$158.47	$253.55	7.50"	4.78"
Full Page	$288.13	$461.00	8.10"	10.60"
Inside Cover	$320	n/a	8.10"	10.60"
Double Page	$500	n/a	16.60"	10.60"

Color space is very limited and is sold on a first come, first serve basis. Ads mailed prior to July 25, 1994 will be honored at the sizes and rates noted in the June 8, 1994 Media Package (revision D) with the exception of full page ads which will be handled with the applicants individually. Applicants wishing to change their ad type will be credited the amount paid for the first ads towards the new space.

Repeat discounts: Ads placed in multiple issues (not necessarily having the same content) at once have discounted rates. Please contact us for more information.

First issue advertisers: If you placed an advertisement of any size in the first issue take 15% off the prices listed above. It is our thanks to you!

Advertising Deadline:

Physical Deadline:
August 12, 1994 -- All materials and payment must be in our hands by this date.

Please notify us prior to August 8, 1994 of your intent to place an ad via US or electronic mail. If you wish to place a color ad, contact us by voice to check to see if space is available.

Status of Advertising:

The appearance of Processor Direct's second issue is entirely dependent upon the support of advertising at this point. The printers are ready, the editors are getting ready to complete the last of the editing, and all of the readers are ready for the magazine to appear at the newsstands and in their mail boxes. The response to the first issue was tremendous in the way of magazine sales, however as one can tell the advertising wasn't quite so strong. Of course, we greatly appreciate those that did advertise. Basically, if we don't get enough advertising we will not be able to produce an issue. Make the readers happy and tell them about your product at the same time -- advertise.

I'm a reader, what can I do?

Tell your favorite developer or dealer to advertise. If you liked an ad of theirs you saw in the first issue, tell them that too.

The Third Issue and Phantom Second:

The June/July slot has been missed due to reasons beyond our control. This, of course, does NOT count against the number of issues sent to subscribers. The "real" second issue is presently going to be marked Volume One, Issue Two, August/September 1994.

The third issue's release has been slated for the proper slot for bimonthly publication (being the October/November 1994 slot).

News Items:

If you have a news item you wish to have included in Processor Direct, contact us. In some cases pictures of products or logos can be included in items, so if available please send them with the information.

What would you do to promote the Jaguar? Do you have an idea that could be expressed on film? STReport wants to see it. And, we're ready to reward the person (or group) with the best idea, in picture format.

That's right, just send us a photograph of how you would promote the Jaguar! You'll also need to send us your name and address, of course.

1st Prize will be an official Atari Jaguar tee-shirt AND an official in-store promotional Jaguar banner!

2nd prize will be a Jaguar tee-shirt (identical to the one above).

3rd prize will be a "JAG RULES!" rubber stamp which is normally available exclusively from Artisan Software!

Photographs will be judged and prizes will be awarded by the Atari/Jaguar editor of STReport, Dana Jacobson.

All photographs must be received by September 20, 1994. The winners will be announced in STReport online magazine, in the issue scheduled to be released on Friday, September 23, 1994.

To be eligible, please submit a clear photograph (color preferred) of your idea. Also include your name and address with the photo! All photographs submitted will become the property of STReport; they will not be returned to you. Contest is valid in the United States and Canada only. Employees of Atari Corporation and staff members of STReport or Amiga Report are not elegible to win. This contest is void where prohibited by law.

Send your photograph, your name and address to:

Jaguar Photo Contest
STReport Online Magazine
1121 Saratoga Street
East Boston, MA 02128-1225
USA

Again, 1st prize includes a Jaguar tee-shirt and a Jaguar banner! The tee-shirt is 100% cotton. It's a black crew-neck shirt with the Atari Jaguar name on the chest. On the back is the famous Jaguar logo. The banner is the same as you've seen at your favorite Jaguar dealer. What? You haven't seen one? Well, it measures 4 feet wide and 2 feet tall! The Jaguar logo consists of those piercing yellow Jaguar eyes above the dark red Jaguar, claw marks and all! These banners are collector's items which are almost impossible to get anywhere! Rumor has it that this one may have been discovered in a rare cache somewhere in the bowels of Sunnyvale. And it can be all yours! Show it off proudly on the wall of your room or fly it out your window! All of your friends will want one, but only you will have one. It's awesome! JAG RULES!

The 2nd prize consists of the Jaguar tee-shirt, as described above. The 3rd prize is the official "JAG RULES!" rubber stamp! Use a bright red ink pad (not included) for a vivid 2.25" by 1.5" image of JAG RULES in the impact of the Jaguar logo type style. Use it as an economical way to advertise your enthusiasm of the Atari Jaguar. Stamp your letters and your envelopes. Stamp your arm as a tattoo. Stamp your money. Stamp school notebooks and post-its. Writing a letter to your favorite software company? Stamp it! Sending a birthday card to your best friend? Stamp it! Dropping a postcard to your brother at school? Stamp it! Let everyone know you're a Jaguar gamer. After all, in the empire of high technology entertainment systems, JAG RULES!

For an example of the JAG RULES logo, call the CATscan BBS. Dial 209/239-1552. Download file: JAGRULES.ZIP. File is ZIP'd and requires PKUNZIP to decompress. Or, call your favorite online service to find it!

Need a tip to help you start thinking of some ideas? Drop us a line in E-Mail to either DPJ on Delphi, 71051,3327 on Compuserve, D.JACOBSON2 on GEnie, or Internet mail at dpj@delphi.com. Or, call us at Toad Hall BBS at (617)567-8642 and leave a private message to Dana Jacobson.

Are you still here? Grab that camera and start taking some pictures! One of them may just be the winner!

Credits: STReport and its staff would like to thank Atari Corporation for its generous donation of the banner and tee-shirts.

****
Announcing The Guitar Reference
A Shareware GEM Guitar Tool for the Atari ST.
****

At the moment the tool acts as a Scale Reference, and Tuning reference.

The demo version of the tool is available from anonymous ftp at:

micros.hensa.ac.uk

in

micros/atari/tos/o/o021/guitdemo.zip

or www on

http://mic2.hensa.ac.uk/

we will upload to other ftp sites in due course, but if you find out that
your favourite site doesn't have it then feel free to upload the demo version.

Details of the full version of the prog follow later, the demo version has
all the features of the full version but is unable to save and load scales or
tunings, or print (other than to disk).

****
Demo version

****
 5 scales in memory
 1 standard E tuning in memory
 new scales and tunings can be created and manipulated but not saved

****
Full Version
****

===============
Scale Reference
===============

Features:
----
 57 scales in the database
 new scales can be added
 scales can be edited
 scales can be displayed on screen at a variety of zoom levels
 scales can be displayed as text (showing each note name) or graphics
 scales can be automatically transposed into the following
   keys: A,A♯,B,C,C♯,D,D♯,E,F,F♯,G,G♯
 scales can be printed out to hardcopy
 scales are displayed using the current tuning automatically
 root notes can be highlighted
 relative scales can be superimposed on the display

================
Tuning Reference
================

Features:
----
 46 tunings in the database
 tuning can be done through the soundchip or via midi
 new tunings can be added
 tuning is easily done with a mouse click

But that's not all
=========
Benefits:
=========
 more flexible than a book!
 more scales than any book
 excellent to practice with
 easy to use
 GEM based

============
Registration
============

Registration details are given in the archive and costs 5 pounds.

If you are a guitarist then I hope you will download it, try it, and hopefully enjoy it.

Thanks,

Alan

ANNOUNCEMENT

ZFC have set up a set of WWW pages, available from your WWW browser (such as Xmosaic) at the following address:

http://www.nl.net/~zfc/index.html

These provide general information about ZFC, the Edith Professional Text Editress package, digressions on the history and future of text editing applications, but in first place we offer

ZFC's Atari Directory

providing access to almost any Atari information and software available on the Internet, such as FTP, Usenet News, Frequently Asked questions and other information on the World Wide Web.

UNDER CONSTRUCTION

The pages are still under construction. We apologize for any inconvenience. Some references point to non-existing files. These mainly provide business information, which we are happy to supply by electronic mail. You can send e-mail to us directly from your WWW browser.

COMMENTS and SERVICES

Any comments, suggestions or contributions are welcome. We plan to include a list (the 'Grey Pages') of Atari addresses soon. Information as to how to include your address in this list can be requested by electronic mail. Several services, such as automated e-mail forms will hopefully be among the possibilities.

ACKNOWLEDGEMENTS

People who have replied to our previous call for contributions---thank you very much. If you provide a WWW service and have mentioned it

to us, please check that our references to your pages are to your
full satisfaction. If not, please notify us by electronic mail.

The latest and greatest version of SOL 3.5 is out. I uploaded it to
atari.archive.umich.edu and it is in atari/Graphics. I will upload it to
some other ftp sites soon. This version adds lots of features and fixes
tons of bugs. It also lets unregistered users access filtering and
warping but with blank lines. New features include warping, improved
filtering, clean JPEG loading (lots of options, octree, dithering, etc.),
and many bugs fixed. The GIF saving bug in 3.1 was also fixed.

I will post a complete list of changes (for those interrested) in an
artcle in comp.sys.atari.st. It's pretty long (this is good!) This list

is also included with SPOFLT35.ZIP.

Hope you all like it, please let me know what you think (post, email, whatever.) I'm interresting in user feedback. This has given me a lot of good ideas for 3.5.

Atari ST/TT/Falcon STuff for sale:

* Books:

Compute's Atari ST Tech. Ref. #2 - AES / This is a must-have book for Atari
programming $8.00 plus shipping

Compute's Atari ST Tech. Ref. #3 - TOS / This is a must-have book for Atari
programming $8.00 plus shipping

C-Manship Complete w/disk / This large book walks you through C programming on the
Atari ST series and has you writing small programs in no time. $12.00 plus
shipping

AES Reference w/disk / Quick ref. for AES calls with C and Assembly examples $5.00
plus shipping

Atari ST Tips & Tricks / Many programming hints $5.00 plus shipping

MIDI & Sound Book for the Atari ST w/disk / This book tells you all about MIDI and
sample programming on the Atari ST series. GFA and C examples on disk. $12.00 plus
shipping

Atari ST BASIC to C / Book to help you move over to C while using your BASIC chops. $6.00 plus shipping

Atari ST Graphics & Sound / Basic sound & graphic info. $5.00 plus shipping

* Magazines:

I have about 30-40 European Magazines w/disk (ST Format, Atari ST User, ST Review) that I'd like to sell; hopefully in one large lump. I'd sell the whole batch with disks for 1.50 each plus shipping, or 5 for 10.00 (plus shipping). I can't really guarantee specific issues on orders of 5, but I will _try_ to give what you ask for. Otherwise it's basically grab-bag. These magazines are a wealth of information, and the coverdisks have commercial programs a lot of the time.

Just some thing I found on GEnie to-day....

For Immediate Release 8/17/94

Gribnif Software is proud to announce the completion of the most recent upgrade to the original desktop replacement for Atari computers, NeoDesk 4. The wait is finally over.

NeoDesk has hundreds of features, so here are just some of the more popular ones in the new version:

- A completely new "look and feel", including 3D windows, enhanced dialog handling, and the ability to have multiple dialogs open at once. All this works on any Atari computer with any ROM version.

- Multicolored icons - each icon can have up to 16 colors, and can even appear completely different when selected.

- Icon Editor - This multiple window Icon Editor lets you edit and modify custom icons for any file or folder. The editor can read many popular icon formats, including ones from other platforms!

- Any Degas, Neochrome, Tiny, IMG, or BMP picture can be viewed (by double-clicking on it) or can be used as the desktop background. Desktop pictures can even be "tiled".

- Each directory window has its own menu bar, making it much easier to find frequently used options.

- Each window has its own "parent directory", Show Info, and trashcan icons.

- Items can be selected from the keyboard, including a search mode.

- File Groups - Now you can arrange commonly used programs and data files together in the same window, even when they are physically contained in drastically different locations! Their names can even be changed, using up to 20 characters.

- Font Control - NeoDesk 4 gives you the power to redefine what fonts and point sizes are used within its windows, and even for the text underneath icons.

- Disk copy, file operations, and floppy disk formatting can all occur "in the background", allowing you to use your computer for other tasks at the same time.

  o Search Files - Easily search your system for one or more files, based
    on their name, size, date, or attributes. A file group can even be
    created containing the results. This is just one example of the
    powerful Filtering options which are also available for file
    operations.

  o Compatible with all Atari computers, in all resolutions, including
    third-party graphics cards.

    NeoDesk 4 is available for just $69.95 plus $4.15 S&H. Owners of
NeoDesk 3 can upgrade to the new version for $25 + $3 S&H by sending us
both original NeoDesk 3 master disks. Backorders are being filled right
now, and may take 2-3 weeks to complete.

(Shipping amounts listed apply to orders shipped within the USA only.
Please contact us for other areas.)

  Fax: (413) 247-5622

P.S Posted by a very happy Neodesk III user.....

NOTE: There is a demo version of Neodesk 4 on GEnie, may be some one
        with better Internet access can post this on A.A....??

MasterBrowse 4.7 has now arrived at

micros.hensa.ac.uk (micros/atari/tos/n/n114/mb47_bin.lzh)

Below is a description by the author...

Download and Enjoy....
Danny

August 20, 1994

M a s t e r B r o w s e 4 . 7

Copyright 1993, 1994, Michel Forget
Electric Storm Software

There is a new version of MasterBrowse available!

Using FTP, you can get the new version of MasterBrowse (when it is validated) from either of the following addresses:

atari.archive.umich.edu (/atari/Newitems/mb47_bin.lzh)
ftp.tu-clausthal.de (/pub/atari/Newitems/mb47_bin.lzh)

Both of the FTP sites mentioned above can be accessed using a mail server, for those who do not have FTP access. The file will also appear soon (with the name MB47_BIN.LZH) on GEnie, Delphi, and CompuServe. In addition, the new version of MasterBrowse will appear at micros.hensa.ac.uk soon.

For those who have never used MasterBrowse before, a detailed description of the program will follow the list of new features and bug fixes.

~ ~

MasterBrowse 4.5:

NEW FEATURE: MasterBrowse now has even more powerful windowed dialog box editing capabilities. The following keys can be used inside a windowed dialog box:

UNDO	= Exit (Cancel)
Return	= Exit (Done)

```
TAB                                = Next Editable Field
Control + TAB                      = Previous Editable Field
Shift + Left Arrow                 = Start Of Editable Field
Shift + Right Arrow                = End Of Editable Field
Shift + Up Arrow                   = First Editable Field
Shift + Down Arrow                 = Last Editable Field
Control + Left Arrow               = Start Of Previous Word
Control + Right Arrow              = Start Of Next Word
Shift + Backspace                  = Delete From Start Of Field
Shift + Delete                     = Delete To End Of Field

Alternate + [UNDERLINED LETTER] = This will exit the dialog
                                  box as if you had clicked on
                                  the button containing the
                                  underlined letter.
```

NEW FEATURE: MasterBrowse now has context sensitive online help, if you use the ST-Guide accessory. If the accessory is installed on your system, pressing the Shift + HELP key will cause MasterBrowse to instruct ST-Guide to open a window with information relavent to your current position. Since all of the information is external, this option does not affect the size of MasterBrowse at all, or how much memory it uses. The entire MasterBrowse manual is available (accessed by entering the help system while you are NOT in a dialog box).

NEW FEATURE: When marking a block, the SHIFT key can be used to "continue" a previously marked block. This means that the start of the block will remain the same, and you are only adjusting where it ends.

NEW FEATURE: MasterBrowse now has an "Edit" menu; "Clip Block" is now "Copy" and "Open Clipboard" is now "Paste". This change was implemented so that MasterBrowse would be more compliant with existing (and future) standards.

NEW FEATURE: MasterBrowse now has a "Delete" option under the "Edit" menu; it will delete the SCRAP.TXT file inside the clipboard folder.

NEW FEATURE: The keyboard shortcut manager has been completely rewritten; you can now add and remove keypresses at will, and change the keyboard shortcut for ANY action (not just menu entries). MasterBrowse no longer makes any distinction between the left shift key and the right shift key. The interface to the keyboard shortcut manager has also been rewritten; it is now much more user-friendly!

BUG FIX: Selecting "Skip" in the colour configuration dialog box will no longer cause MasterBrowse to set that colour to white.

BUG FIX: If the text or background colour is chnged, the window affected

is now completely redrawn.

NEW FEATURE: MasterBrowse now has a push/pop position feature; this can be thought of as a temporary bookmark. You "push" (set) the position, then "pop" (unset and move to) the position. This is much faster than setting a bookmark because it does not cause a dialog box to appear on the screen.

MasterBrowse 4.5a:

BUG FIX: The file selector should not work correctly (again).

BUG FIX: AutoSave Options will now always save the options to the path pointed to by MB_CONFIG.

BUG FIX: If you have previously registered MasterBrowse, copy your USERINFO.DAT file into the new MasterBrowse directory. MasterBrowse will analyze the file; if it is valid, the "MasterBrowse Information" dialog box that is shown to unregistered users will not be shown to you. This did not work (at all) in the last version, for which I humbly apologize.

MasterBrowse 4.7:

NEW FEATURE: MasterBrowse no longer uses an internal font selector; instead, it can now interface directly with the Universal Font Selector, by Michael Thanitz. The Universal Font Selector is much more reliable than the internal font selector previously used by MasterBrowse. The MasterBrowse Installation Program will copy UFSL.PRG to your /AUTO folder automatically, so no extra effort on your part is required.

NEW FEATURE: MasterBrowse now uses windowed progress displays, so loading a document no longer prevents other applications/accessories from executing in the background and it allows you to switch from one application to another while a document is being loaded. (NOTE: If you turn off progress displays, the loading speed will be markedly faster.)

NEW FEATURE: To make using ST-Guide with MasterBrowse easier, you can now set the name of the ST-Guide accessory. To do this, create an environment variable called "HELP_ACC" and set it to the filename (no path and no extension) of the help accessory.

Example:

You would like MasterBrowse to use TEST.ACC, instead of ST-GUIDE.ACC. Add the following line to GEM.CNF:

setenv HELP_ACC=TEST

If you have Mag!X, you would add the following line to

MAGX.INF:

#_ENV HELP_ACC=TEST

That is all that there is to it. In order, MasterBrowse will look for HELP_ACC, 'ST-GUIDE', and 'STGUIDE'.

INSTRUCTIONS: The HyperText documentatin has been improved to take better advantage of the power offered by the ST-Guide utility.

BUG FIX: Selecting "Close All Documents" will now clear the list of open documents, so you can use the "Quick Access" feature without getting an error message.

INSTALLAITON: The MasterBrowse Installation Program:

NEW FEATURE: If the destination path you specify in the installation path contains folders that do not exist, the installation program will now create them.

NEW FEATURE: If there is no AUTO folder, the installation program will now create one on the boot device.

NEW FEATURE: The destination path no longer needs to be terminated by a '\' character.

BUG FIX: The file selector will no longer contain an invalid path specification if you double-click on an editable text field.

NEW FEATURE: The installation program will no longer generate an error if the destination file exists during a copy operation. The old file will silently be erased.

 ====================
 |  Fast Path v1.0  |
 |   Press Release  |
 |  August 15, 1994 |
 ====================
```

Trace Technologies is proud to introduce FastPath.

Shipping date: AVAILABLE NOW!

```
 ++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
```

   "A Straight Line- The shortest distance between two points."
          "FastPath- The shortest distance between two paths."

Fast Path v1.0 - The Indispensable Path Selection Utility!

Are you struggling with the system file selector, clicking here and there
to get to your word processing folder or that favorite game? Sure, using
an alternative file selector can be better, but have you found yourself
wishing it had more predefined paths and extenders? Wish no more!

FastPath, a demoware program by Keith Gerdes and Trace Technologies,
works in conjunction with your system/alternative file selector, giving
you unparalleled power and flexibility when it comes to quickly getting
to the directory you need. When you need to get somewhere fast, you
need the speed of FastPath.

 o Provides 34 user-definable paths in an attractive graphical user
   interface. Call FastPath as needed or have it automatically appear
   before the file selector. Select a path via the mouse or keyboard
   and you're instantly there, reaching distant points of your hard
   disk with ease. Paths can be defined, copied, moved, deleted or
   edited with point-and-click ease. Displays the current path being
   sent to the file selector along with the file selector prompt and
   filename specifications.

 o Remembers the last 4 paths used in the file selector, for instant
   recall. Combined with the above, you have 38 paths at your disposal.

 o Provides 38 user-definable extenders, one of which can be passed to
   the file selector to narrow the range of files displayed.

 o Save your favorite paths and extenders to disk for future use.

 o Full mouse and keyboard control.

 o Convenient Help screen.

 o FastPath can access CodeHead's powerful file maintenance utility,
   MaxiFile III, by a simple keypress if MaxiFile is resident as a desk
   accessory.

 o Works in all color or monochrome graphic resolutions with a minimum
   screen size of 640x200. 100% assembly. Uses as little as 22K of RAM.
   Compatible with all TOS versions and ST/STe/TT/Falcon models.

 o Strong support from one of the oldest developers for the Atari ST
   whose current product line includes Data Diet, Squish II, Data Rescue,
   Load Aladdin, TOS4TRAPv1 -and soon to be released- Missouri, Fast Menu
   and the Falcon030 Toolkit.

 o A demo version is freely available on online services.
   NOTE: Some features are not available in the demo version.

   The full version can be purchased for only US$10. Consult the next
   section for details.

 ++

Purchasing FastPath:

[NOTE: Canadian users- please see specific FastPath order info below.]

Send US$10 plus shipping & handling.   S&H: $3 in the U.S.,
                                           $5 priority mail in the U.S.,
                                         or $5 outside the U.S.

Texas residents must add 8.25% sales tax.

Please make payment by check (issued by a U.S. bank), U.S. funds
money order (drawn on a U.S. bank), or postal money order.
 [NOTEs: GEnie gifts of time are not accepted.
         And no credit card order capability.]

 Payable to:
  Trace Technologies or Keith Gerdes

 Send to:
  Trace Technologies [FASTPATH]
  PO Box 711403
  Houston, TX 77271-1403

What else do you get for your investment?
 -> Tech support and bug fix updates!
 -> Plus special discounts on future products.

==== Canadian users ====

In order to save you money and offer you quicker turnaround, I started a registration service with Howard Carson, a member of the Toronto Atari Federation User Group. Howard will take care of processing all Canadian orders- including user registration, money transactions and software distribution.
Please note, tech support and all other support will still be the sole responsibility of TraceTech.

The Canadian registration fee is $20 Cdn, total amount.

Send all Canadian registrations to:
Howard Carson
#601-2904 St. Clair Ave. East
Toronto, Ontario
Canada
M4B 1N7

And make all Canadian payments to:
Howard Carson

Howard accepts personal cheques and current account cheques drawn on Canadian banks and trusts, as well as MO's, drafts and cash. He will try to service registrants within 72 hours (for cash, M.O and draft/certified cheque customers), and within 10 days for personal cheque customers. '72 hours' and '10 days', refer to the actual elapsed period before an item is mailed/registered/applied (as appropriate).

==== Other currencies ====

If you wish to setup a distribution point for other currencies, please contact me.

==== Order Survey ====

1) File selector(s) currently in use?

2) TOS version?

3) Computer model?

4) High density disk drive?

This survey is optional and no item is mandatory- skip any you find objectionable. Your answers will simply be filed away for future reference.

++
Customer support is available via:

Phone: (713)771-8332 [weekdays 1PM-5PM Central Time]
GEnie: Category 2, Topic 12 or K.GERDES

Internet: k.gerdes@genie.geis.com

This is just an OLD list I have, since I haven't had the chance to do updates
etc. because I haven't had Internet access for a while, but I'm back now and will
try to continue keeping it as updated as possible and posting it now and then.

Please, if you have any comments, additions to the list, if you've found any
mistakes
etc. do contact me- hallvart@ifi.uio.no

```

PS!!! 155.198.1.40 is more reliable!!! - (uni-paderborn, GERMANY)

- to find the numbered address of the FTP site, use the following command,
  while inside FTP: ftp> !host FTP-address [CR] i.e. "!host cs.bu.edu"

DOWNLOADING FILES, Instructions: [CR]= carriage return/return/enter
---
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR]
   OR use the (IP) number address, NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once.
    i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having
    to reply "y" for each file when asked "get {filename}?".
12) quit [CR] to end FTP session and go back to UNIX
13) close [CR] to close the FTP site you're currently on, so that another
    site can be opened without having to set bin, hash, prompt etc. again.

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on
  which the programs were intended, or in UNIX .....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after
  uncompressing .Z and/or .uu.
  Use the appropriate decomompression program for this.
- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
    i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys,
    xlinksys etc...) (ALL files with "sys" in their names)
    i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh,
    xlba.lzh etc...) (ALL files ending with ".lzh")
    i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to
  another computer (use an other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
                          i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:
- mdir [CR] to show disk-directory/space left.
- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)
- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for
  "low density")
- mcopy a:{filename on disk} {copy filename} [CR] to get a file from
  disk to computer.   i.e. "mcopy a:dlist.txt dlist.txt"
- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

MiNTOS is now at release 1.4.1

I've just made available via anonymous ftp (from
ftp://earth.ox.ac.uk/pub/mintos) the latest version of MiNTOS, Release

1.4.1. This is a bug fix release which has no more functionality than
Release 1.4.

Since Atari dropped the 8-bit computer line it's become progressively more
 difficult to find software and equipment for our Atari 8-bit computers.
 The days of Antic and Analog issues filled with ads are gone. Many
 suppliers and software authors can no longer afford to advertise.

Back in April, I decided to try to remedy this. I sent out a mailing to
 over ninety suppliers, inviting them to send in free ads for "The Atari 8bit
 Omnibus". This resource guide will be available for sale beginning October
 10th for $5 US, including shipping and handling. Once it's being printed I
 will release full ordering information.

Right now, I'm offering the same free advertising to the rest of the Atari
 8bit community. Free classified ads will be accepted, subject to the
 following limitations:

(1) Maximum 50 words/ad, two ads per person. Editor decides what
 constitutes a word. Editor will edit oversize ads.

(2) All ads must pertain to the Atari 8-bit computer line.

(3) All ads must include the advertiser's full name and postal address.
 Email and phone numbers are a good idea as well.

(4) Advertisers offering software may only offer software originals. Ads

offering pirated software will be refused.

(5) Editor and publisher are not responsible for personal losses dues to situations arising from these ads.

(6) Hope nobody was scared off by all this.

(7) Send ads via Email to:
D.PATERSON2@genie.geis.com
Use the message title: Omnibus Ad

Thanks for your support. Watch for the release announcement later this month.

Hi,

A beta release of Aladdin Ghostscript 3.01 is now available from

ftp://lifshitz.ph.utexas.edu/pub/atari/ghostscript/gs301bt1.zoo.

The code in this archive is a 68000 executable, and has all of the PostScript support files and three fonts (Courier, Times-Roman, Charter-Italic) compiled into the code. This reduces the baggage that accompanies GS, but it makes the executable rather large (~800K). Also included in the archive are a bunch of files to support the new on-line help features.

The extensive changes in the Atari interface are certain to have introduced bugs, so please expect them. When enough kind people have made useful bug reports and most problems appear to be fixed, I plan to make available several versions with various levels of hardware support. There will probably also be versions without the start-up files compiled into the executable.

The Atari interface has changed a good deal since GS 2.61. Look at http://godel.ph.utexas.edu/Members/timg/gs/gs.html if you want an overview of what has changed before you download anything.

The Jaguar 64-bit interactive multimedia system is the most advanced video game system ever created. If you are reading this, you either own a Jaguar or plan on buying one as soon as some more games become available for it. You are also interested in finding out what you can do to get your favorite games made for the Jaguar. I am glad to see that you are interested and if everyone participates in this campaign, we will _all_ be seeing our favorite games made for the Jaguar.

This is the situation. The people at Atari Corp. are doing everything that they can do to make sure the Jaguar is a success. But because the Jaguar is a new product and it is competing against systems like 3DO, SNES, Genesis, and future systems like Saturn and the Nintendo 64-bit, big name companies are wary about investing in the Jaguar. They are also not sure if there is a demand for their games on the Jaguar.

Yes, Atari Corp. has 150+ companies developing for the Jaguar, but most of these companies are one or two man operations. And a lot of these people are writing games for the Jaguar as an extra to their full-time job. It could very well take these small companies a year or more just to finish one game. There is also no guarantee that these companies will even release the game they are working on and if they do release it, the game may not be a hit.

We are at a point where Atari Corp. is waiting for big name companies to decide to develop for the Jaguar. At the same time, these companies are waiting to see a demand for their games on the Jaguar. So when will these companies realize that there is a demand for their games on the Jaguar? One of two things must happen. Atari Corp. must sell 1 million or more Jaguar units before these companies will start making their games for the Jaguar. Since Atari Corp. will not be able to sell 1 million Jaguars without these companies selling their games for the Jaguar, the second thing must happen. This is for companies to receive hundreds of letters from Jaguar owners that want their games for the Jaguar.

If these big name companies are not convinced to make their games for the Jaguar in the next few months, they will sign to develop for Sega's 32X, Sega's Saturn, or Nintendo's new 64-bit. If this happens, the Jaguar will never get the games you want.

Will writing letters work? Yes, it will work. I've learned from my prior business experience that letter writing does work. There are many ways of determining a demand for a product, but nothing is more convincing to a company president than hundreds of letters from consumers that are asking for their product. Letters are concrete proof that demand exists.

If you want to see big name companies and big name titles for the Jaguar, join in with this letter writing campaign. I'm participating in this campaign for three reasons: 1) I really think that my letter will make a difference in the decision making process at these companies. 2) I don't want to think "what if" in the future. I want to do my part now so I can say that I did my share. 3) It is my duty as a consumer to let companies know how they can satisfy my needs (or wants).

I hope you will see a need to participate in this campaign as well. And don't think that someone else will write because if that person feels the same way you do, nobody will write. The Atari Community is small and this campaign will require everyone to participate. As soon as you are done reading this supplement, print it up, and put it some place where you won't forget about it. Every month you will need to write the companies listed or this campaign won't work. Make it a priority in your already busy life.

If you do not see the games you want for the Jaguar in this campaign, do not be concerned! When the following game companies start making games for the Jaguar, the Jaguar will be on its way to becoming the most popular home video game system in the world! And when the Jaguar is on its way to fame, your favorite games will be made for it! But the campaign will not work unless you participate. And you cannot only write one game company and not the others. Each time one company signs to make Jaguar games, it helps get another company to make Jaguar games. Let's make this writing campaign the most effective video game writing campaign that the world has ever seen!

Ok, the companies we are concentrating on are companies that are familiar with high quality graphics and sound in games. Most of these companies are well-known for PC games.

****
********** SEPTEMBER, 1994 **********
****

Atari Corp.
id Software
WMS Industries Inc.
Capcom USA Inc.
Electronic Arts Inc.

>>>>>>>>>>>>>>>>>>>>>>>>> Atari Corp. <<<<<<<<<<<<<<<<<<<<<<<<<

First, we will first be writing Don Thomas, Jr. at Atari Corp. to let him know that we are participating in these campaigns. No, we aren't writing to annoy him. We are writing him so that Atari Corp. knows the magnitude of this letter writing campaign. If Atari Corp. knows that five-hundred people will be writing Dynamix in October, the appropriate person at Atari can contact this company on becoming a developer for the Jaguar during this time. Do not expect a letter from Don Thomas, Jr. We are not

writing him for a response. We are only writing him to inform him of what we are doing.

Atari's mailing address is:

Atari Corp.
Attn: Don Thomas, Jr.
1196 Borregas Avenue
Sunnyvale, CA 94089

Place the letters: C.A.I.N. at the bottom left side of the envelope so that Atari will know what it is for.

Please use the following form letter:

> (date)
>
> (your address)
>
> Don Thomas, Jr.
> Atari Corporation
> 1196 Borregas Avenue
> Sunnyvale, CA 94089
>
> Dear Mr. Thomas,
>
> I am writing you to inform you that I will be writing the following game companies to encourage them to make games for the Jaguar. I hope that my efforts will help Atari Corp. to sign these companies to make games for the Jaguar.
>
> The companies I will be writing are:
>
> September: WMS Industries, Capcom, Electronic Arts
> October: Sierra On-Line, Dynamix, LucasArts, NovaLogic
> November: Spectrum Holobyte, Psygnosis, Origin
> December: QQP, Broderbund, Konami
>
> Thank you for reading my letter and for recording the number of people writing these companies.
>
> Sincerely,
>
> (sign your name)
>
> (print your name)

>>>>>>>>>>>>>>>>>>>>>>>>>> id Software <<<<<<<<<<<<<<<<<<<<<<<<<

The letter to id Software should thank the company for producing Wolfenstein 3-D for the Jaguar, encourage them to make Jaguar DOOM the

best that they can make it, and to encourage the company to make QUAKE for the Jaguar.

id Software's e-mailing address:

Jay Wilbur, CEO
id Software
Town East Tower
18601 LBJ Freeway
Suite 615
Mesquite, Texas 75150

The form letter to Atari Corp. is the only form letter that will be used in this campaign. This is because companies do not take form letters as seriously as those that are originally written.

The following is a list of things which you may want to say in your letter to id Software:

Dear Mr. Wilbur,

1) How much you enjoy Jaguar Wolfenstein 3-D.
2) How much you like id Software.
3) Thanks for making Wolfenstein 3-D for the Jaguar.
4) How you would like to see the best graphics possible for DOOM on the Jaguar.
5) How you would like to see four-player or more networking capability for Jaguar DOOM.
6) How you are excited about Jaguar DOOM coming out this year.
7) How you would like to see QUAKE made for the Jaguar.
8) Thank you to Mr. Wilbur for reading your letter.

Another thing which you may want to include in this letter is concerning the Jaguar resolutions. id Software is using a lower resolution on the Jaguar because they want to get the game as quick as Jaguar Wolfenstein. I, personally, do not care if Jaguar DOOM is as fast as Wolfenstein. One suggestion could be to make two modes (just like on the PC). One mode is for higher resolution and slower speed. The other mode is for a lower resolution, but higher speed.

>>>>>>>>>>>>>>>>>>>>>> WMS Industries Inc. <<<<<<<<<<<<<<<<<<<<<<

As of September 14, 1994, Mortal Kombat II is not being produced for the Jaguar. And Acclaim has no plans to produce Mortal Kombat for the Jaguar. But next year, WMS Industries will be able to release Mortal Kombat II for any game system that the company wishes to release it for. The time is now to let WMS Industries know that we want to see Mortal Kombat II and Mortal Kombat III for the Jaguar.

Mortal Kombat II is by far the #1 most wanted game for the Jaguar according to the Most Wanted Games for the Jaguar list by CAIN Newsletter. If this game is released for the Jaguar, the Jaguar will be the most

wanted game system.

The mailing address of WMS Industries Inc. is:

Louis J. Nicastro, CEO
WMS Industries Inc.
3401 North California Ave.
Chicago, IL 60618-5889

OK. I don't think I have to remind you that you should write as neat and as professional as possible to get the best results. If you certify your letter, you may even reach the president with your letter.

The following is a list of things in which you may want to say in your letter to WMS Industries Inc.:

Dear Mr. Nicastro,

1) How much you enjoy Mortal Kombat II
2) How you like the games that WMS Industries makes.
3) How you enjoy the Atari Jaguar.
4) How you think the Atari Jaguar is the only game system that will do the game justice.
5) How you will run out and get the game for the Jaguar as soon as it is released.
6) How you would also like to see Jaguar be the first system to get Mortal Kombat III.
7) Thank you to Mr. Nicastro for reading your letter and for considering making Moral Kombat II for the Jaguar.

>>>>>>>>>>>>>>>>>>>>>>> Capcom USA INC. <<<<<<<<<<<<<<<<<<<<<<<

Capcom is known for producing the Street Fighter II series of games. The company is also known for producing games such as The Great Circus Mystery Starring Mickey & Minnie Mouse, Demon's Crest, and Saturday Night Slam Masters. The company also does conversions of popular titles such as Wizardry V and Eye of the Beholder.

Super Street Fighter II Turbo is second only to Mortal Kombat II on the most wanted games for the Jaguar CAIN Newsletter listing. If the game existed for the Jaguar, it would no doubt sell a lot of Jaguars. But Capcom is not making Super Street Fighter for the Jaguar and no plans have been announced to do so in the near future.

The strange thing is that Capcom is making Super Street Fighter II Turbo for the 3DO platform. The game will even have better graphics than that on the SNES and Genesis. But this only means that if Capcom will make a version of SSFIIT for a much higher-priced system than there is a chance that the company will be willing to make a Jaguar version.

The mailing address for Capcom USA Inc. is:

Scott Smith
Product-Development Coordinator
Capcom USA Inc.
475 Oakmead Parkway
Sunnyvale, CA 94086

The following is a list of things in which you may want to say in your letter to Capcom USA Inc.:

Mr. Smith,

1) How much you enjoy Street Fighter at the arcades.
2) How you like the games that Capcom makes.
3) How you enjoy the Atari Jaguar.
4) How you think the Atari Jaguar is the only game system that will do the game justice.
5) How you will run out and get Super Street Fighter II Turbo for the Jaguar as soon as it is released.
6) Thank you to Mr. Smith for reading your letter and for considering making Super Street Fighter II Turbo for the Jaguar.

You may also want to FAX Capcom USA by the phone number: 408/774-3995. But sending mail through the U.S. Postal Service may prove to be more successful.

>>>>>>>>>>>>>>>>>>>> Electronic Arts Inc. <<<<<<<<<<<<<<<<<<<<

Electronic Arts is the publisher of some incredible games such as: NBA Showdown, FIFA International Soccer, PGA European Tour Golf, NHL Hockey '94, Wing Commander, Super Wing Commander, John Madden NFL Football, Escape from Monster Manner, Twisted, Mario Andretti Racing, MLBPA Baseball, and many more! Electronic Arts also owns several other software companies that they may give the OK to develop the Jaguar for if they see there is a demand for Jaguar games.

Unfortunately, Electronic Arts is also a major backer of 3DO, a company that is a big competitor of Atari Corp. Electronic Arts is spending a lot of time and money on making games for 3DO that it could be spending on the Jaguar.

There is hope though! Electronic Arts is a licensee. This means that the company has Jaguar developers units. Electronic Arts' management just has to give the OK to make games for the Jaguar.

The mailing address for Electronic Arts Inc. is:

Lawrence F. Probst III, President
Electronic Arts Inc.
1450 Fashion Isle. Blv.
San Mateo, CA 94404

The following is a list of things in which you may want to say in your letter to Electronic Arts:

Dear Mr. Probst,

1) How much you enjoy Electronic Arts games.
2) How you have been buying Electronic Arts games for your computers since the company was started (if this is true).
3) How much you enjoy your Atari Jaguar.
4) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
5) The games that you would love to slee on the Jaguar (choose two or three Electronic Arts games--I'm choosing John Madden NFL Football!).
6) How you believe Electronic Arts games will be unbelievable when using the graphics and sound capabilities of the Jaguar.
7) How you will run out and buy Electronic Arts' games when they are produced for the Jaguar.
8) Thank you to Mr. Probst for reading your letter and a thank you for considering producing games for the Jaguar.

****
********** OCTOBER, 1994 **********
****

Sierra On-Line Inc.
Dynamix Inc.
LucasArts Entertainment Co.
NovaLogic

>>>>>>>>>>>>>>>>>>>>>>>>> Sierra On-Line Inc. <<<<<<<<<<<<<<<<<<<<<<<<<

Sierra On-Line is a company that is well-known for their role-playing games such as their Space Quest and Police Quest series. The company is also known for their latest hits in the PC world: Gabriel Knight, Aces Over Europe, and Leisure Suit Larry VI. Sierra On-Line is planning to release their new title, Phantasmagoria, very soon.

Sierra On-Line is definitely a company that needs to be developing for the Jaguar if the Jaguar CD-ROM is to become used. If Sierra On-Line starts making games for the Jaguar CD-ROM, several other companies will make games for it as well.

The mailing address for Sierra On-Line is:

Kenneth A. Williams, President
Sierra On-Line Inc.
P.O. Box 485
Coarsegold, CA 93614

The following is a list of things in which you may want to say in your letter to Electronic Arts:

Dear Mr. Williams,

1) How much you enjoy Sierra On-Line games.
2) How you have been buying Sierra On-Line games for your computer since the company started making computer games (if this is true).
3) How much you enjoy your Atari Jaguar.
4) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
5) How you would like to see Sierra On-Line producing several Jaguar CD-ROM games.
6) The games you would love to see on the Jaguar (choose two or three Sierra On-Line games).
7) How you believe Sierra On-Line games would be fantastic on the Atari Jaguar.
8) How you will run out and buy Sierra On-Line games when they are made for the Jaguar.
9) Thank you to Mr. Williams for reading your letter and for considering producing games for the Jaguar.

In my letter, I will also be encouraging Mr. Williams to make games which have the option of using a keyboard with the Jaguar. A keyboard can be created for the Jaguar and Sierra On-Line could work with Atari Corp. to produce one for it. The use of a keyboard in role-playing games help children learn words. This is something that Sierra has gotten away from in PC games.

I'm also writing Sierra to release HOYLE Card Games for the Jaguar. I love this game and it would be great to see a modem feature being used in the Jaguar version of this game.

>>>>>>>>>>>>>>>>>>>>>>>>>> Dynamix Inc. <<<<<<<<<<<<<<<<<<<<<<<<<

Dynamix Inc. is a game company owned by Sierra On-Line. This game company makes many wonderful titles for the PC such as: Betrayal at Kronder, Aces of the Pacific, and Front Page Sports Football Pro. The company is planning to release: Front Page Baseball, Battledrome, LodeRunner: A Legend, MetalTech: Earth Siege, Alien Legacy, and an excellent reviewed game called Aces of the Deep (submarine game).

Dynamix Inc. is making some real great games and these games would be a very good addition to the present Jaguar game library.

The mailing address for Dynamix Inc. is:

Alan Higginson
Executive Vice-President
Dynamix Inc.
P.O. Box 978
Oakhurst, CA 93644-0978

The following is a list of things in which you may want to say in your

letter to Dynamix Inc.:

Dear Mr. Higginson,

 1) How you enjoy Dynamix games on the PC.
 2) How much you enjoy your Atari Jaguar.
 3) How you feel that the Jaguar will be the video game system of the
    future due to its high-performance/low-price.
 4) The games that you would love to see on the Jaguar (choose two or
    three Dynamix games--I'm choosing Front Page Sports Football,
    Alien Legacy, and Aces of the Deep).
 5) How you believe Dynamix games will be unbelievable when using the
    graphics and sound capabilities of the Jaguar.
 6) How you will run out and buy Dynamix games when they are produced
    for the Jaguar.
 7) Thank you to the person for reading your letter and for considering
    producing games for the Jaguar.

  >>>>>>>>>>>>>>>>>>> LucasArts Entertainment Co. <<<<<<<<<<<<<<<<<<

LucasArts is famous for making games based on popular movies. The company has also has several popular titles out for the PC. Some of these titles are: Star Wars Rebel Assault, X-Wing, Indiana Jones and the Fate of Atlantis, Monkey Island 2: Le chuck's Revenge, and Day of the Tentacle. And if there is any truth to the rumor of a new Indiana Jones movie, LucasArts will probably make a great game based on this movie.

The mailing address for LucasArts is:

LucasArts Entertainment Co.
LucasArts Games Division
P.O. Box 10307
San Rafael, CA 94912

The following is a list of things in which you may want to say in your letter to LucasArts:

Dear Sir or Madam,

 1) How much you enjoy LucasArts games.
 2) How much you enjoy the Atari Jaguar.
 3) How you feel that the Jaguar will be the video game system of the
    future due to its high-performance/low-price.
 4) The games you would love to see on the Jaguar (choose two or three
    LucasArts games).
 5) How you believe LucasArts games would be fantastic on the Atari
    Jaguar.
 6) How you will run out and buy LucasArts games when they are made for
    the Jaguar.
 7) Thank you to the person for reading your letter and for considering
    producing games for the Jaguar.

You may also want to FAX LucasArts by the phone number: 415/721-3344.

>>>>>>>>>>>>>>>>>>>>>>>>>>>> NovaLogic <<<<<<<<<<<<<<<<<<<<<<<<<<<<

NovaLogic is known for its high-quality games on the PC. The president and CEO, John Garcia makes sure each game title released is of the highest quality. NovaLogic is known for producing Comanche: Maximum Overkill (a game title that rated high on the Most Wanted Games for the Jaguar listing from CANI Newsletter). The company also produced WolfPack (a submarine simulator) and UltraBots. The latest and greatest game from NovaLogic is Armored Fist. This game is highly praised by reviewers that have seen it.

John Garcia is interested in producing modem games and networking games in the future. NovaLogic's games would be a great addition to the Jaguar game library.

The mailing address for NovaLogic is:

John Garcia, President
NovaLogic
19510 Ventura Blvd.
Suite 200
Tarzana, CA 91356

The following is a list of things in which you may want to say in your letter to NovaLogic:

Dear Mr. Garcia,

1) How much you enjoy NovaLogic games.
2) How much you enjoy your Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) The games that you would love to see on the Jaguar (choose a couple of NovaLogic games).
5) How you believe that NovaLogic games will be even more fantastic when using the graphics and sound capabilities of the Jaguar.
6) How you would like to see NovaLogic games that use the Jaguar voice-modem and networking capabilities.
7) How you will run out and buy NovaLogic games when they are produced for the Jaguar.
8) Thank Mr. Garcia for reading your letter and for considering producing games for the Jaguar.

You may also want to FAX NovaLogic by the phone number: 818/774-0684. Please consider writing NovaLogic through the U.S. mail first and then FAX NovaLogic.

****
********** NOVEMBER, 1994 **********
****

Virgin Games
Spectrum Holobyte
Psygnosis
Origin Systems

>>>>>>>>>>>>>>>>>>>>>>>>>> Virgin Games <<<<<<<<<<<<<<<<<<<<<<<<<

Virgin Games is already a Jaguar developer, so this letter is mainly to thank the company and to encourage them to make more titles for the Jaguar. Virgin is suppose to be making Cannon Fodder, Demolition Man, and Dragon for the Jaguar. The company is also planning to make a CD-ROM game called Creature Shock for the Jaguar.

Virgin Games is known for making a popular PC CD-ROM game called: The 7th Guest. It has also made Land of Lore, Dune II, and Indy Car Racing. It will also be releasing 11th Hour and Command & Conquer for the PC soon.

The mailing address for Virgin Games is:

Virgin Games
18061 Fitch Avenue
Irvine, CA 92714

The following is a list of things in which you may want to say in your letter to Virgin Games:

Dear Sir or Madam,

1) How you enjoy Virgin Games' games.
2) How much you enjoy the Atari Jaguar.
3) How you are really happy that Virgin Games is making games for the Jaguar.
4) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
5) How you would like to see other popular games such as The 7th Guest (and name a few) besides the ones the company is already making for the Jaguar.
6) How you would like to see the Jaguar modem and network features used in Virgin Games' software (OPTIONAL).
7) How you will run out and buy Virgin Games' games when they are produced for the Jaguar.
8) Thank you to the person for reading your letter and for producing games for the Jaguar.

You may also want to FAX Virgin Games by the phone number: 714/833-8717.

>>>>>>>>>>>>>>>>>>>>>>>> Spectrum Holobyte <<<<<<<<<<<<<<<<<<<<<<<<

Spectrum Holobyte is famous for their Falcon flight simulator game.

The game can even be played through the modem on PCs. Spectrum Holobyte has just released Fields of Glory and is rumored to be working on Falcon 4.0.

Modem games is something that a game system must have if it will be successful in the future. And Spectrum Holobyte is well-known for their modem games. Falcon 4.0 sounds like it would be perfect for the Jaguar.

The mailing address for Spectrum Holobyte is:

Barry J. Folsom, President
Spectrum Holobyte
2490 Mariners Square Loop
Alameda, CA 94501

The following is a list of things in which you may want to say in your letter to Spectrum Holobyte:

Dear Mr. Folsom,

1) How much you enjoy Spectrum Holobyte games.
2) How much you enjoy your Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) How you would like to see Falcon 4.0 with voice-modem and networking capabilities on the Jaguar.
5) How you would like to see Fields of Glory and other Spectrum Holobyte games for the Jaguar.
6) How you believe Spectrum Holobyte games will be unbelievable when using the graphics and sound capabilities of the Jaguar.
7) How you will run out and buy Spectrum Holobyte games when they are produced for the Jaguar.
8) Thank Mr. Folsom for reading your letter and for considering producing games for the Jaguar.

You may also want to FAX Spectrum Holobyte by the phone number: 510/522-2138. But please keep in mind that sending a letter through the U.S. Postal Service may be more effective.

>>>>>>>>>>>>>>>>>>>>>>>>>> Psygnosis <<<<<<<<<<<<<<<<<<<<<<<<<

Psygnosis is a well known producer of video games. A few of Psygnosis' popular games are Microcosm, Shadow of the Best II, and Puggsy. A recent game is Hexx: Heresy of the Wizard. TThe company has also done Lemmings.

The mailing address for Psygnosis is:

Psygnosis
675 Massachusetts Ave.
Cambridge, MA 02139

The following is a list of things in which you may want to say in your letter to Psygnosis:

Dear Sir or Madam,

1) How much you enjoy Psygnosis games.
2) How much you enjoy your Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) The games that you would love to see on the Jaguar (choose a couple of Pysgnosis games).
5) How you believe Psygnosis games will be unbelievable when using the graphics and sound capabilities of the Jaguar.
6) How you will run out and buy Psygnosis games when they are produced for the Jaguar.
7) Thank the person for reading your letter and for considering producing games for the Jaguar.

You may also want to FAX Psygnosis by the phone number: 617/497-6759.

>>>>>>>>>>>>>>>>>>>>>>>>> Origin Systems <<<<<<<<<<<<<<<<<<<<<<<<<

Origin Systems is a maker of many popular PC role-playing and action games. The company is owned by Electronic Arts but may have freedom to develop for any system it wishes. Some of the games that Origin makes are: Ultima series (most recently Ultima VIII: Pagan), Wing Commander Privateer, and just recently Pacific Strike. Origin will be also making Biforge and Wings of Glory.

Since Origin Systems is a subsidary of Electronic Arts, there is no specific person to write.

The mailing address for Origin Systems is:

Origin Systems
Attn: Production Teams
P.O. Box 161750
Austin, TX 78716

The following is a list of things in which you may want to say in your letter to Origin Systems:

Dear Sir or Madam,

1) How much you enjoy Origin Systems games.
2) How much you enjoy your Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) The games that you would love to see on the Jaguar (choose two or three Origin Systems games).
5) How you wish the Origin Systems Production Teams will attempt to get these great games on the Jaguar.

6) How unbelievable Origin Systems games will be when using the graphics and sound capabilities of the Jaguar.
7) How you will run out and buy Origin Systems games when they are produced for the Jaguar.
8) A thank you to the person reading for reading your letter and for considering producing games for the Jaguar.

****
********** DECEMBER, 1994 **********
****

QQP, Inc.
Broderbund
Konami
MicroProse

>>>>>>>>>>>>>>>>>>>>>>>>>>>> QQP, Inc <<<<<<<<<<<<<<<<<<<<<<<<<<<<

Many people are not familiar with QQP, but the company has released some pretty amazing games for the PC. Some of the games are: Solitaire's Journey, Merchant Prince, The Perfect General, Conquered Kingdoms, and their most recent--Origamo.

Most of the games that QQP makes either has to do with strategy or war. Strategy games are always popular, but war games have been restricted to PCs due to lack of a "save game" feature on video game systems. Jaguar can save games on its cartridges so this is no longer a problem in getting war games to home video game systems.

The mailing address for QQP, Inc. is:

QQP, Inc.
495 Highway 202
Flemington, NJ 08822

The following is a list of things in which you may want to say in your letter to QQP:

Dear Sir or Madam,

1) How much you enjoy strategy games.
2) How much you enjoy your Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) The games that you love to see on the Jaguar (choose two or three QQP games).
5) How you would like to see these games make use of Jaguar's voice-modem and networking capabilities.
6) How you believe QQP games will be unbelievable when using the graphics and sound capabilities of the Jaguar.
7) How you will run out and buy QQP games when they are produced for the Jaguar.

8) Thank you to the person for reading your letter and for considering producing games for the Jaguar.

>>>>>>>>>>>>>>>>>>>> Broderbund Software Inc. <<<<<<<<<<<<<<<<<<<<

Broderbund Software is well-known for producing two games. The first game is a CD-ROM game called Myst. The second is the Carmen Sandiego series of games. The Carmen Sandiego is educational.

The mailing address for Broderbund Software Inc. is:

Edmund R. Auer, President
Broderbund Software Inc.
500 Redwood Blvd.
Novato, CA 94948-6121

The following is a list of things in which you may want to say in your letter to Broderbund:

Dear Mr. Auer,

1) How much you enjoy Broderbund Software's games.
2) How much you enjoy your Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) How you would love to see Myst, Carmen Sandiego, and any other new Broderbund titles on the Jaguar.
5) How unbelievable Broderbund Software games will be when using the graphics and sound capabilities of the Jaguar.
6) How you will run out and buy Broderbund Software's games when they are produced for the Jaguar.
7) A thank you to Mr. Auer for reading your letter and for considering producing games for the Jaguar.

>>>>>>>>>>>>>>>>>>>>>>>>>> Konami Inc. <<<<<<<<<<<<<<<<<<<<<<<<<

Konami makes several popular games. Among these are Double Dribble: The Playoff Edition, Lethal Enforcers 2, Batman the Animated Series, and a new game called Contra 4. The company has also made Rocket Knight Adventures, Teenage Mutant Ninja Turtles Tournament Fighters, Blades of Steel, Track & Field II, Top Gun: The Second Mission, and many others. Konami is also rumored to be developing Gradius for Sony's new PSX. Since Konami is already developing for other next generation systems, it may be more difficult to convince them to make games for the Jaguar. But Konami certainly does bring a lot of titles to a game system.

The mailing address of Konami is:

Konami Inc.
900 Deerfield Parkway
Buffalo Grove, IL 60089-4510

The folowing is a list of things in which you may want to say in your letter to Konami:

Dear Sir or Madam,

1) How much you enjoy Konami games.
2) How much you enjoy your Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) The games that you would love to see on the Jaguar (choose a few Konami games).
5) How unbelievable Konami games will be when using the graphics and sound capabilities of the Jaguar.
6) How you will run out and buy Konami games when they are produced for the Jaguar.
7) A thank you to the person for reading your letter and for considering producing games for the Jaguar.

>>>>>>>>>>>>>>>>>>>>>>>>> MicroProse Inc. <<<<<<<<<<<<<<<<<<<<<<<<

MicroProse is already developing Jaguar games so this letter will be mainly to thank MicroProse and encourage the company to make more of their games for the Jaguar. MicroProse is supposedly making Grand Prix, Gunship 2000, and possibly Star Trek: The Next Generation game. But MicroProse has made a lot of fantastic games for the PC that should really be made for the Jaguar. These include: World Circuit, Fleet Defender, Master of Orion, and Civilization. Civilization has already been made for the Falcon030 so it may not be too hard to convert the game to the Jaguar. Since Jaguar can save games on cartridge, it may be possible to make Civilization on the Jaguar. MicroProse is also making Across the Rhine, Colonization, and Masters of Magic.

MicroProse is indeed a very good company to have making Jaguar games. The quality has always been good and it would be nice for the company to make a lot of their games for the Jaguar.

The mailing address for MicroProse is:

Ronald J. Bueche, CEO
MicroProse Inc.
180 Lakefront Dr.
Hunt Valley, MD 21030-2245

The following is a list of things in which you may want to say in your letter to MicroProse:

Dear Mr. Bueche,

1) How much you enjoy MicroProse games.
2) How much you enjoy your Atari Jaguar.

3) How you are really glad that MicroProse is making games for the Jaguar.
4) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
5) How you would like to see other popular games besides Gunship 2000 and Grand Prix be made for the Jaguar (name a few of your favorite MicroProse games).
6) How you would like to see the Jaguar voice modem and network capabilities used in MicroProse games. (OPTIONAL)
7) How you will run out and buy MicroProse games when they are produced for the Jaguar.
8) Thank you to Mr. Bueche for reading your letter and for making games for the Jaguar.

You may also want to FAX MicroProse at the phone number: 410/771-1174. But only FAX MicroProse if you do not have time to mail the letter or if you have already sent mail to the company.

```
                ************************************
                *                                  *
     ************* LETTER WRITING CAMPAIGN FINISHED *************
                *                                  *
                ************************************
```

After you have done writing all of these companies, the letter writing campaign will be finished. If you have written all of these companies, the campaign will no doubt be successful and we will be seeing the games we want for the Jaguar very soon.

Please spread the word around about this letter writing campaign on online systems, BBSs, message areas, user groups, and any other place that you can help get the word out abuot this campaign.

Also, please tell your friends! It is very important to get everyone participating in this letter writing campaign!

********** THANK YOU! **********

==========

..... Is Coming Soon to a FALCON near you!

TOWERS II, is an RPG for the Atari Falcon 030 computer.

It features:

--> Smooth Scrolling.

--> Window (168x110) or full screen (320x200) movement.

--> Runs in True Color mode, and makes good use of color.

--> Plays MOD music at 50 Khz Stereo.

--> Sounds effects are in stereo.

--> Over three times the size of Towers for the ST.

--> Can be launched from MultiTOS or BlowUP.

--> Requires appx 2megs of Free RAM and 4megs of HD space.

--> Can run on a VGA monitor, RGB monitor, or TV.

--> Powerful spells and weapons.

--> Real-time combat.

--> And much more...

TOWERS II, is being released as a 'Try Before You Buy' product. You can progress through several levels before you need to order the manual.

The Manual will Retail for only $24 US, and will be available directly from us, or through participating resellers.

Date of release should be around late October, 1994. Screen shot TIFFs have been released on several boards. Look for 'TOWRSIIP.ZIP'.

Hello everybody.

Stello 1.11 othello is out with features such as

 - Works under Gem, all Atari computers, all screen resolutions,

(x resolution must be at least 640)
- Supports Multitos and WINX
- Uses multitasking under Multitos
- Advanced gameplaying algoritms, alfa-beta minimax, iterative deepening, response killer table, saves game tree and uses the zerowidth minimax modifikation.
- One of the best Othello programs in the world.
- Background pictures on the board
- Supports english, german, french and danish.
- Dialogs in windows
- Nice interface (3d buttons and checkboxes even under old tosversions, niceline menus)

New in Stello 1.11.

The endgame search is a little faster and Stello now speaks french. Small bugfixes.

More details in the documentation. Stello is a Shareware game. I have uploaded the game to the following ftp sites, in the file STELL111.LZH.

ftp.uni-kl.de
ftp.uni-paderborn.de
sun.rz.tu-clausthal.de

and if i ever can make it througt the net i will also be at

atari.archive.umich.edu

Happy Othello playing.
Claus J. Pedersen.

Hi,

Here is NEW the address of my Atari Web page:

     http://www.dl.ac.uk/MISC/ATARI/atari.html

This page is for you so you must tell me what you want to see. Please send ideas or things for inclusion to me. Send all mail directly to me and make sure any files are UUEncoded first.

I rely on your support so please help out. There will be some interesting stuff here soon so I'll inform you closer to the date.

I want to include a Questions and Answers page so send any questions you have to me (especially to do with MIDI or Programming as I have some support with these).

I look forward to hearing from you all.

Thanks,

               Mark msh@dl.ac.uk

From: levine@mc.com (Bob)
Subject: GEMini Atari CDROM 4 sale
Message-ID: <CxMH3G.GMG@world.std.com>
Sender: Lexicor@world.std.com (ysiu@lexicor.com)
Organization: Mercury Computer Systems, Inc.
Date: Wed, 12 Oct 1994 14:31:58 GMT
Approved: Lexicor@world.std.com
Lines: 41

I have several new unopened copies of the current GEMini Atari
CDROM for sale. I am posting here because I carry them in my
stock, but have had little success selling them maybe because
most of my clients are using PC or MAC. (probably not cool to
mention here...)

Anyway, help me liquidate this stock of CDROMs. The description
from the Walnut Creek Catalog:

"The GEMini CDROM contains 616MB of quality public domain programs,
shareware, and commercial demos for Atari computers. Filled with
2872 files, the GEMini CDROM supports the Atari ST, TT, Falcon and
Portfolio palmtop computers. This disc also has text files and
graphics for the Lynx and Jaguar video game systems. You can install
the GEMini CDROM on an Atari or MSDOS BBS."

Please don't ask me any Atari specific questions as I have never owned
one. You can ask specifics about the CDROM to the manufacturer,
Walnut Creek at 1-800-786-9907. Walnut Creek gets $39.95 + $5.00
shipping/handling. I am asking $19.95 including shipping if you
prepay with a check/MO. COD please add $6.00, MA residents add 5%
for the Governer.

For the suspicious:
Radio Devices is a registered business in the State of MA in the City
of Marlboro. Radio Devices business license can be verified by calling
the City Clerk at (508) 460-3775 9am-4pm EST. Radio Devices is also
an authorized distributor of Walnut Creek CDROMs.

```
 ==================================
 |  TraceTech's Falcon030 ToolKit  |
 |  Press Release -- October 1994  |
 ==================================
```

Trace Technologies is proud to introduce the F030TKIT.

Shipping date: AVAILABLE NOW!

Special price through November 15, 1994. Plus a discount on FastPath.

```
 ++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
```

F030TKIT - a 'must have' collection of utilities for ALL Falcon owners!

Do you have problems deleting folders, printing text or renaming files?

Tired of losing memory?

Need quick and easy access to a floppy disk formatter?
What about one with extensive, simple-to-use options?

Would you like to configure system parameters to your preferences?

Then have I got a package for you!

TraceTech's Falcon030 ToolKit, a demoware package by Keith Gerdes and Trace Technologies, offers several answers to those questions and more.

o What does the Falcon030 ToolKit do?

The F030TKIT is a multifaceted utility package.

1) TOS4Trap v2 addresses changes in TOS4's GEMDOS to improve software compatibility.

2) From a co-author of DC Formatter, Trace Formatter Jr CPX gives you quick and easy access to a floppy disk formatter which has flexible options such as number of tracks, DD/HD format, faster I/O, etc.

3) NVRAM (non-volatile RAM) Configurator allows you to setup your F030's hardware and system software with simple user preference selections.

o TOS4TRAP.PRG v2

An upgrade to the shareware program, TOS4Trap v1, the _original_ TOS4 "fix" utility which set the standard for bridging the gap of TOS4 GEMDOS compatibility.
For example: helps pre-STalker 3.03, pre-NeoDesk 4, MaxiFile, Deskmanager, some GFA compiled programs and many other programs.

Accept only the best, which gets better in TOS4Trap v2. v2 also ends those memory loss blues. Simply open and close directory windows at the GEM Desktop to see what I mean.

o TRACEFMT.CPX

fka DC Formatter Jr - A CPX-based floppy disk formatter originally scheduled for release in the DC CPXtensions package.

Available options:
1) # of tracks - 0, 40 and 80-85
2) # of sides - 1 and 2
3) Sectors per track - 9, 10, 18 and 20
4) Drive - A and B
5) Format type - Normal and Skewed
6) Volume label

+ Convenient save configuration feature.
+ Reverse formatting for data safety.
+ Abort feature with continue option.

o CFGNVRAM.APP

Configure various NVRAM settings used by TOS4.
Special NOTE: Contains a unique bootup setting option for TOS 4.04.

Available options:
1) System bootup delay - Time (0-80 seconds) [NOTE: TOS 4.04 only]
2) System bootup video mode - ST Low, ST High or No Change
3) International time format [_IDT] - 12 or 24 Hour
4) International date format [_IDT] - MMDDYY, DDMMYY, YYMMDD or YYDDMM
5) Keyboard preference [_AKP] - 8 countries
6) Desktop preference [_AKP] - 5 languages

Also related to NVRAM:
RESETNVR.PRG - reset your NVRAM to default configuration
DO_BOOTN.PRG - writes an executable boot sector to a floppy which will reset the NVRAM to default configuration on bootup
Don't be locked out of your computer if your NVRAM gets messed up!

o RUN_COFF.PRG/TTP/GTP

Run a program with the 68030 cache turned OFF, restored on exit.

o And updates to a couple of 'DC Programs of the Week'.

o All programs are 100% assembly.

o Strong support from one of the oldest developers for the Atari ST whose current product line includes Data Diet, Squish II, Data Rescue, Load Aladdin, TOS4TRAPv1, FastPath -and soon to be released- FlexMenu and Missouri.

 o A demo version is freely available on online services.
   NOTE: Some features are not available in the demo version.

 ++

Purchasing the F030TKIT:

 **** TOS4Trap v1 registered user notice ****
   Registered users of the TraceTech shareware product, TOS4Trap v1,
 can apply that paid fee toward this order. For example, if you sent
 in $5, deduct $5 from the total owed for the F030TKIT.

[NOTE: Canadian users- please see specific F030TKIT order info below.]

As an introductory special, order BEFORE November 16, 1994 and save $5!
 Send US$25, which includes shipping & handling.
   o Outside the U.S. - add $5
   o For priority mail in the U.S. - add $3

To get this discount, your letter MUST be postmarked NO LATER than
November 15, 1994.

Orders postmarked AFTER November 15, 1994:
 Send US$30, which includes shipping & handling.
   o Outside the U.S. - add $5
   o For priority mail in the U.S. - add $3

If you haven't picked up the new FastPath utility yet, it is ONLY $10
when ordered with the F030TKIT.

And not to forget MORE MONEY SAVING discounts, contact TraceTech for
special direct order prices on our commercial products.

Texas residents must add 8.25% sales tax.

Please make payment by check (issued by a U.S. bank), U.S. funds
money order (drawn on a U.S. bank), or postal money order.
 [NOTEs: GEnie gifts of time are not accepted.
         And no credit card order capability.]

 Payable to:
  Trace Technologies or Keith Gerdes

 Send to:
  Trace Technologies [F030TKIT]
  PO Box 711403
  Houston, TX 77271-1403

What else do you get for your investment?
 -> Tech support and bug fix updates!
 -> Plus special discounts on future products.

==== Canadian users ====

In order to save you money and offer you quicker turnaround, I started a registration service with Howard Carson, a member of the Toronto Atari Federation User Group. Howard will take care of processing all Canadian orders- including user registration, money transactions and software distribution.
Please note, tech support and all other support will still be the sole responsibility of TraceTech.

F030TKIT orders before November 16, 1994:
 The Canadian registration fee is $40 Cdn, total amount.

To get this discount, your letter MUST be postmarked no later than November 15, 1994.

F030TKIT orders after November 15, 1994:
 The Canadian registration fee is $48 Cdn, total amount.

If you haven't picked up the new FastPath utility yet, it is ONLY $16 Cdn when ordered with the F030TKIT.

You can contact Howard for MORE MONEY SAVING discounts on TraceTech commercial products.

Send all Canadian registrations to:
 Howard Carson
 #601-2904 St. Clair Ave. East
 Toronto, Ontario
 Canada
 M4B 1N7

And make all Canadian payments to:
 Howard Carson

Howard accepts personal cheques and current account cheques drawn on Canadian banks and trusts, as well as MO's, drafts and cash. He will try to service registrants within 72 hours (for cash, M.O and draft/certified cheque customers), and within 10 days for personal cheque customers. '72 hours' and '10 days', refer to the actual elapsed period before an item is mailed/registered/applied (as appropriate).

 ==== Other currencies ====

If you wish to setup a distribution point for other currencies, please contact me.

Proposal for a new newsgroup
Request for Discussion: comp.sys.atari.programmer

by: Yat Siu (Lexicor@world.std.com)

Group name: comp.sys.atari.programmer
Status: unmoderated (ysiu@lexicor.com)
Distribution: world-wide
Summary: a newsgroup for the discussion of programming on the atari
          TOS or 8bit computer and any clones or otherwise

Justification:

     There are currently several comp.sys.atari.* newsgroups, however
none cover the aspect of programming questions. Atari Computer systems
(8bit, 16 or 32bit and clones) have various development tools from other

third party developers, some of which are very good. Atari Users require a forum where they can ask questions about programming in any language.

This new newsgroup is also meant to encourage programming on the atari and asking questions regarding programming. Very often programming questions are asked in other forums, but they either don't get a reply or ignored because it is not related to the topic. Atari Computers have got a user base of programmers who need to support each other on the usenet on a more global scale, and it should also help third party developers for atari development tools read and see what programmers use/require/want.

Charter:

The proposed group will provide a forum for the discussion of programming queries, discussions of techniques or anything else that is related to programming on the atari for any language that exist on the atari (scheme, gcc, c, basic, pascal, assembler etc.)

NOTE

This RFD is being issued in concordance with the guidelines set in the "How to create a new usenet newsgroup" FAQ regularly posted to news.announce.newgroups. Please refer to this article if you have any questions about the newsgroup creation.

Unless the discussion indicated a need to resubmit a new RFD, the CFV will be posted approximately three to four weeks after the posting of this RFD.

This RFD was (cross)-posted to the following groups:
news.announce.newgroups, news.groups, comp.sys.atari.st, comp.sys.atari.8bit, comp.sys.atari.announce and mailed to the gem-list and lexicor-list

OCR V1.3 - Optical Character Recognition for Atari ST/STE/TT/Falcon
---

I've uploaded OCR 1.3 at

ftp.uni-kl.de	/pub/atari/incoming/ocr13.lzh
(soon:	/pub/atari/misc/ocr13.lzh)
ftp.isbiel.ch	atari/diverses/ocr13.lzh
ftp.cnam.fr	/pub/Atari/Text/ocr13.lzh
atari.archive.umich.edu	atari/Applications/Other/ocr_13.lzh

Features of OCR 1.3:
- FREEWARE
- RSC files in English, German, French, Dutch included.
- DOCs in English, German.
- Supports GDPS scanner drivers.
- It works in any resolution (>=496x200).
- Hypertext On-line help is available using ST-Guide or 1st-Guide.
- It works under MTOS, MagiC (=Mag!X), Geneva (not tested).
- Windowed dialogs.

Years ago I looked forward with eager anticipation as each new issue of
 Antic and Analog hit the newsstands. Page after page of programs and news,
 but even better were the ads. Dozens of companies with new and exciting

hardware and software all clamouring for my attention.

The shrinking 8-bit market has kept most advertisers from any large scale advertising in recent years. Several months ago, I decided to change that. I wrote to all the vendors and developers listed in Michael Current's list, offering them free advertising in The Atari 8-bit Omnibus. And, page by page, the Omnibus filled. Ads came in all shapes and sizes, from professionally laid out full page ads to a torn piece of notepaper with a handwritten scrawl.

And now it's complete. Find out about 'Lemmings' and 'Operation Wolf' clones for the 8-bit. Slave a PC to your 8-bit. Make your original 800 compatible with the XE - even down to memory banking! And many, many more offers, featuring software and hardware, showing that the Atari 8-bit is still a fine machine.

On November 1, 1994, the Omnibus will begin shipping (it's off to the printers right now). This twenty-four page book is only $5 US per copy, shipped worldwide. Orders for five or more copies are only $4 US each, when shipped to a single address.

To order, send your cheque or money order payable to David A. Paterson to:

comp.sys.atari.announce:60

I have started a new Atari WWW page that is thought to fill out a bit of that
huge gap that programmers feel once in a while. The pages will contain the
information on system calls, hardware registers, Q & A, and everything a
programmer might need to know.

There are a lot of hard work to go there, though, and I still need info on
the new system calls of MiNT > 0.95, MultiTOS and TOS >= 4.0x.

Please take a look at the pages at http://www.dtek.chalmers.se/~d2cg/gem.html
or http://www.mdstud.chalmers.se/~d2cg/gem.html and tell me what you think.
I need suggestions on what the pages could contain!

- to find the numbered address of the FTP site, use the following command,
  while inside FTP: ftp> !host FTP-address [CR] i.e. "!host cs.bu.edu"

DOWNLOADING FILES, Instructions: [CR]= carriage return/return/enter
----
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR].   i.e. "open ftp.uni-kl.de" [CR]
    OR use the (IP) number address, NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR].   (set `binary` transfer mode)
8) hash [CR].   (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR].   i.e. "get rename.lzh" [CR]

10) mget [CR] to get several files at once.
    i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having
    to reply "y" for each file when asked "get {filename}?".
12) quit [CR] to end FTP session and go back to UNIX
13) close [CR] to close the FTP site you're currently on, so that another
    site can be opened without having to set bin, hash, prompt etc. again.

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on
  which the programs were intended, or in UNIX ....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after
  uncompressing .Z and/or .uu.
  Use the appropriate decomompression program for this.
- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
    i.e.   "mget *sys" [CR] (will get f.x.; datasys, lm23isys,
    xlinksys etc...) (ALL files with "sys" in their names)
    i.e.   "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh,
    xlba.lzh etc...) (ALL files ending with ".lzh")
    i.e.   "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to
  another computer (use an other terminal's disk drive);
- rlogin {computer name} [CR].   i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

- mcopy {filename} a: [CR] i.e.   mcopy microtcx.zoo a:
                           i.e.   mcopy microtcx.zoo icone.lzh shblr.arc a:
- mdir [CR] to show disk-directory/space left.
- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)
- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for
  "low density")
- mcopy a:{filename on disk} {copy filename} [CR] to get a file from
  disk to computer.   i.e. "mcopy a:dlist.txt dlist.txt"
- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

I post this for a friend:

Hello! do you love soundtrack MODs? Do you have an Atari STe,TT or a Falcon?
So, you will sure be interested with the news I'm bringing to you:
CPU_MODA.PRG is a NEW 4-channels MOD-player to read and listen your favourite
MODs. But why should you be interested? well I give more details.
- very short program (less then 11Ko program and not even compressed).
- it owns all the effects of the MODs (TIMER,RANDOM,...)
- it has been optimized
- it is a rethinked algorithm (entirely original)
- the quality hasn't be beaten for now (try it, you'll agree).
- the source is reusable and can be called in any program (calls commented)
- it needs only the space of the module +70Ko.
- it can be installed as .ACC (background music) .GTP (application) or .PRG
- it offers a CDplayer interface with pleasant shortcuts.
- it includes details on all the parameters for the MODs-effects.

Where can you find it?
at the ftp.cnam.fr server under the name:
Falcon/Music/cpumodf3.lzh for Falcon
Music/cpumodst.lzh for STe & TT

If you have any question you can send a mail at this address:
kirstin@odin.u-3mrs.fr
             Signed: RUIZ Patrick (the author of ESSAY,VIBRAX,DIAMF030...)

Yes, finally the new version of SuperSam is here!

It has been or soon will be uploaded to the following FTP sites:
  ftp.uni-kl.de
  ftp.cnam.fr
  ftp.funet.fi
  atari.archive.umich.edu
  micros.hensa.ac.uk

It has been or soon will be uploaded to CIX and hatched into BBS file
echos.

Registered users of 1.01 can upgrade for free!

Main additions since version 1.01:

* Direct to disk recording, playback AND editing!
* Support for 16 bit mono samples!
* Support for virtual/alternative RAM!
* 4 new sample formats - DVS, AIFF, AIFC and 8SSP!
* Many improvements to the interface!
* Many bug fixes!

The SuperSam features list now includes:

  * Handles 10 sample file formats - AVR, WAV, VOC, AU, IFF, SPL,
    AIFF, AIFC, DVS and RAW!
  * Handles 8 bit mono, 8 bit stereo, 16 bit mono
    and 16 bit stereo samples
  * Almost all operations can be performed direct to disk
  * Clipboard cut, copy, load, paste, replace, overlay
  * Ability to import/export from the GEM clipboard
  * Ability to sign and unsign samples
  * Ability to fade in/ fade out samples
  * Ability to boost volume by 25% or to the max possible
  * Ability to reduce volume by 25% or to zero
  * Ability to zoom in for finer editing
  * Flexible deleting
  * Ability to swap the channels on a stereo sample
  * Ability to pan the stereo image left to right or vice versa
  * Ability to edit only the left or right stereo channel
  * Ability to shift sample playback frequency
  * Ability to create samples from the MIC input either to RAM or
    direct to disk
  * Supports all Falcon playback frequencies
  * Customisable
  * Can be installed as an application to play samples when they
    are double clicked
  * Will play or load a sample dropped on its desktop icon
  * Online HELP system
  * Batch conversion between all file formats
  * Jukebox mode to play all samples in a folder
  * Fully GEM legal programming
  * MultiTOS compatible
  * Supports virtual and alternative RAM
  * Dynamic Memory Allocation

Contact Daniel Hastings at cs93dlh@dcs.ex.ac.uk for more details.

I have uploaded the latest version of the demo of our great game PONG 2000
to several archives including ftp.funet.fe, ftp.uni-kl.de and
atari.archive.umich.edu. I didn't get any connection to the HENSA archive
in the UK, if somebody want please put it there too. I hope that PONG 2000
demo will be spread over the world like ....

Joost.

From: djs@jet.uk (David Stevenson)
Subject: Release of CBZONE 1.0
Message-ID: <CzBGtv.3HL@world.std.com>
Sender: Lexicor@world.std.com (ysiu@lexicor.com)
Organization: Joint European Torus
Date: Tue, 15 Nov 1994 16:08:19 GMT
Approved: Lexicor@world.std.com
Lines: 34

Posted on behalf of Roland Givan, rgivan@cix.compulink.co.uk
Please direct any queries to Roland.

My latest version of CBZONE has now been released.

This is a Battlezone type game ported from X-Windows, and runs on all
configurations of Atari (AFAICD). Its happiest most on a TT or Falcon with
FPU as it makes heavy use of floating point maths.

To support the HENSA ftp site, I am restricting its Internet distribution
to HENSA.

Site: micros.hensa.ac.uk

File: micros/atari/tos/p/p002/cbzone10.zip

Distribution outside of the Internet (PD libraries, BBS etc) is *not*
restricted.

CBZONE10.ZIP contains versions for the 68000 and the 68030/68882. It also
contains all source code to compile these (and other versions) as well as
all the original X-Windows stuff. The .zip file is approximatly 150K long.

This .zip superceeds both CBZONE02.ZIP and CBZSRC02.ZIP which are currently
available on CIX.

Version 1.12 of the MiNT multitasking program is now available in both
source and binary forms. This release is primarily intended for
programmers who are already familiar with MiNT, or for MultiTOS users
who wish to upgrade their existing MultiTOS installation. The license
under which MiNT 1.12 is being distributed encourages redistribution,
and I hope that some more "user-friendly" packages (such as the
MiNTos Unix work-alike) will soon be available. MiNT 1.12 may also

be distributed with commercial products, provided that the licensing
terms in the "copying" file accompanying MiNT are adhered to.

The files (available from atari.archive.umich.edu, micros.hensa.ac.uk,
ftp.uni-muenster.de, and other Atari archive sites) are:

mint112b.zoo MiNT binaries
mint112s.zoo MiNT source code
mint112d.zoo MiNT documentation

 IMPORTANT NOTICE!!!!!!! IMPORTANT NOTICE!!!!!! READ THIS!!!!!!!!

As I will lose free Internet access soon (in about a month's time) and will
no longer be able to search and test endlessly all FTP sites any more, like
I have done so far, I will now hand this list over to Mark Smith in the UK,
so that it can be further updated and posted. I might be back on the net
later, and take over again (or do it in co-operation with Mark), but as of
now Mark Smith (msh@dl.ac.uk) will handle everything concerning this list.
So, write to him if you have any updates or new sites etc, and not me.
See ya!

Hallvard, Oslo, Norway

PS. Thanks to all for your encouragement and support!!
Good luck Mark!

 PS!!! 155.198.1.40 is more reliable!!!   - (uni-paderborn, GERMANY)

- to find the numbered address of the FTP site, use the following command,
  while inside FTP: ftp> !host FTP-address [CR] i.e. "!host cs.bu.edu"

DOWNLOADING FILES, Instructions: [CR]= carriage return/return/enter
----
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR].   i.e. "open ftp.uni-kl.de" [CR]
    OR use the (IP) number address, NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR].   (set `binary` transfer mode)
8) hash [CR].   (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR].   i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once.
    i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having
    to reply "y" for each file when asked "get {filename}?".
12) quit [CR] to end FTP session and go back to UNIX
13) close [CR] to close the FTP site you're currently on, so that another
    site can be opened without having to set bin, hash, prompt etc. again.

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on
  which the programs were intended, or in UNIX ....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after
  uncompressing .Z and/or .uu.
  Use the appropriate decompression program for this.

- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
    i.e.   "mget *sys" [CR] (will get f.x.; datasys, lm23isys,
    xlinksys etc...) (ALL files with "sys" in their names)
    i.e.   "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh,
    xlba.lzh etc...) (ALL files ending with ".lzh")
    i.e.   "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to
  another computer (use an other terminal's disk drive);
- rlogin {computer name} [CR].   i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

Part of this is dependent on you having the GNU msdos-utilities available
at your site. If you don't, ask your local system operator how to transfer
files to/from MSDOS disks.

- mcopy {filename} a: [CR] i.e.   mcopy microtcx.zoo a:
                           i.e.   mcopy microtcx.zoo icone.lzh shblr.arc a:

- mdir [CR] to show disk-directory/space left.

- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)

- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for
  "low density")

- mcopy a:{filename on disk} {copy filename} [CR] to get a file from
  disk to computer.   i.e. "mcopy a:dlist.txt test1.zip"

- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

- eject [CR] to eject disks from disk-drives that don't have "eject buttons".

            -

Hello everybody.

Stello 2.0 othello is out with features such as

- Works under Gem, all Atari computers, all screen resolutions, (x resolution must be at least 640).
- Supports Multitos and WINX.
- Uses multitasking under Multitos.
- Advanced gameplaying algoritms, alfa-beta minimax, iterative deepening, response killer table, saves game tree and uses the zerowidth minimax modifikation.
- One of the best Othello programs in the world.
- Background pictures on the board as black/white or color.
- RSC files in english, german, french and danish.
- Dialogs in windows.
- Nice interface (3d buttons and checkboxes even under old tos versions, niceline menus, animation of disc's).
- Printing of moves, board and transscript as ASCII, GDOS or Speedo GDOS.
- Export of moves, board and transcript as ASCII or META file. This means that you can take the output and use it in a wordprocessor that supports import of META files.
- You can set the size of the output, (boardsize of 4 - 16 cm) 2 types of transcript, (with or without disc's) and turn on/off the border text (abcdefgh, 12345678)
- There is a (very primitive) fontselector, and you can choose the output device (printer from 21-30 and meta file from 31-40)
- Context sensitive help with St-Guide.

New in Stello 2.0

This is a major update. Here is a list of the most important improvements.

- I have implemented the zero-width minimax modification in the normal alfa-beta search, which means 10 % fewer nodes to examine.
- The "brain" has been much improved, which means that it now gives a

more accurate and stable evaluation of the positions.
- Endgame search now 10% faster. (16000-23000 moves/sec on a TT)
- Special endgame search mode where Stello can search for a "Win", "Win/Draw" or "Max disc". The "Win" search is 10-50 faster than the "Max disc" search, and in extreme cases up to 200 times faster.
- Stello now evaluates its commandline, so you can drag games to its Icon, and it will then load it, and you can install Stello with a DOC type of "GAM", so it will start and load a game if you click on it.
- Stello now also supports the drag & drop protocol under Multitos.
- The filename is displayed in the game window so you can see what game you have loaded.
- Manual input of games is now completely mouse controlled.
- GDOS and Speedo GDOS is now supported. This means very nice output via printer and META file. If you don't have GDOS you can still print and export as ASCII.
- Window with transcript of game.
- Context sensitive helpfile for St-Guide.
- various bugfixes (It should now finally be possible to load games and pictures on TOS 1.0 and TOS 1.2)

More details in the documentation. Stello is a Shareware game. I have uploaded the game to the following ftp sites, in the file STELLO20.LZH.

ftp.uni-kl.de
ftp.uni-paderborn.de
ftp.cs.tu-berlin.de
atari.archive.umich.edu
micros.hensa.ac.uk
ftp.cnam.fr

Happy Othello playing.
Claus J. Pedersen.

Atari Web Pages Latest News

Version 1.0

Date 22/11/92

by

Mark Stephen Smith

==========

Foreword

Hello and welcome to the first news item on the Atari Web pages. This document will describe the Atari Web pages as provided by Mark Stephen Smith and will inlcude a list of the latest updates for the month. Each month I hope to update this text with the very latest additions and news on the Atari Web pages.

Hopefully these pages will provide an invaluable service to their users, but they are still at an early stage and developing all the time. As such any feedback and support you may have for these pages is more than welcome, it is infact encouraged. The more input I get from its users the better, as then I will know what is good and bad about these pages and can change them approproately in the hope of increasing their value to their readers.

Now on with the show.

==========

What are the Atari Web pages?

These are a collection of pages covering all formats of the Atari. In these pages may be found the latest news, reviews, software for downloading, and various other information and links to other places of interest to Atari users.

I have tried to make the structure of these pages easy to follow and as intuitive as possible but there is still a lot of work to be done yet.

==========

How do I access them and what is the Web?
~~~ ~~ ~ ~~~~~~ ~~~~ ~~~ ~~~~ ~~ ~~~ ~~~

First of all I shall look at what the Web is or to use its full name the World Wide Web. The Web is new way of accessing the Internet, unlike previous methods where you were required to enter commands into the program you were using the Web uses a more user driven method of getting around the Internet. This method is much more graphical than former methods and as such is much easier to get to grips with.

When using a Web browser (the name given to a program used to access Web pages) the control method usually consists of a point and click operation. A Web page will consist of text and graphics which are sometimes highlighted in some way to indicate that they are selectable and link to more information or a particular piece of data.

Such a link is reffered to as a hyperlink. In fact the whole system is a variation on hypertext and uses a script to create each page. Each script is written to a HTML (HyperText Markup Language) standard which contains the main body of text in the page and a few command tags for the browser as to how to format the page and what to do with links, etc.

Web pages may contain text, graphics, sounds, and animations, although the later two are normally supported through external software. It is also possible using the Web to gain access to newsgroups, ftp sites, and gopher services all through the one program. As such this makes this a very powerful tool for Internet access, and coupled with its ease of use this has suddenly became the big thing in the recent Internet explosion into the media.

Browsers can handle all properly written HTML scripts but may vary in operation when scripts are incorrect or contain mistakes. Browsers can be divided into to distinct types, graphical and text only. Popular graphical browsers include NCSA's Mosaic and the recent new browser NetScape. On the text side Lynx is the most popular textual browser (NOTE: text browsers don't show any form of graphics).

To access the Web you must either use one of the above mentioned browsers on a machine such as a Sun, PC or Mactintosh, or if you want to access it via your Atari you will need a copy of the Lynx browser as unfortunately there aren't any graphical browsers YET for the Atari.

Next month I will give full details on how to access the Web using the Atari.

==========

Where do I find the Atari Web page?
~~~~~ ~~ ~ ~~~~ ~~~ ~~~~~ ~~~ ~~~~

>From your Web browser choose to open URL and enter the following address:

http://www.dl.ac.uk/MISC/ATARI/atari.html

If you can store a hotlist of addresses or something similar on your browser then it may be worth including this address for quick access in the future.

Once you've done that you should see my main page so I hope you enjoy it, and don't forget to write with your thoughts.

==========

What you will find in the Web pages every month.
~~~~ ~~~ ~~~~ ~~~~ ~~ ~~~ ~~~ ~~~~~ ~~~~~ ~~~~~

>From the main menu you have several links available to you, some under miscellaneous and others specific to a particular machine, or collection of machines. First I will look at what will be in the Miscellaneous section.

****

Atari Related links, Documents, FAQ's and Newsletters
~~~~~ ~~~~~~~ ~~~~~ ~~~~~~~~~ ~~~~~ ~~~ ~~~~~~~~~~

First in the list are "Atari Related Links", these links are to other sources of Atari information or data (such as files, etc.).

There is a link to many of the major Atari holding FTP sites on the Internet. Links to several Web pages by different people on the Atari. This will grow as worthwhile sites come up. At the moment you can visit:

- HENSA to download Atari files (Moderated by Denesh Bhabuta)
- ZFC's Atari Pages by Annius V. Groenink. This has links to various Atari related places, along with talk of his own work on Edith and his new Drive U Project. Annius is also working on a version of the Mosaic browser for the Atari and the best of luck goes to him on that.
- Christer Gustavsson's Atari Gem Programmers Page. Very useful information for programmers grapling with Gem and the operating system. Also offers help via his questions answers page. Some links can be found to Atari related places.
- CAIN Atari Pages. CAIN is the Central Atari Information Network and they create a newsletter which is updately monthly on all things new to do with the Atari. There are also links available here.
- Martin Maisey's Atari Pages. Contains information (downloadable) on programs written by himself for the Atari. Again there are links to other Atari places.

This section has one or two more candidates for the near future when more work has been done on the owners pages.

Documents
~~~~~~~~~

Useful documents will appear in here. At the moment there is:

- Atari FTP List by Hallvard Tangeraas (essential for the latest news on who provides Atari FTP sites). This is updated in theses pages almost as soon as
~~~~~~~~~

  Hallvard changes it.
- Atari TOS Desktop Survival Kit by Thomas J Hopper. An essential guide to getting the most out of your DESKTOP.INF and NEWSDESK.INF files.
- Recommended list of software for the Atari by Denesh Bhabuta. List compiled by Denesh for me of his best software for the Atari (updates coming soon). Mostly PD and Shareware, this list contains links to download most of the software mentioned.
- Information on picture formats by Dave Bagget. Lots of information on the format of different picture files for the Atari.

FAQ's (Frequently Asked Questions)
~~~~~ ~~~~~~~~~~ ~~~~~ ~~~~~~~~~

Useful FAQ's will appear here. At the moment there is:

- Atari ST SLIP FAQ. This is a guide to connecting your Atari to a network. All you want to know about networks and the Atari.
- Atari CD FAQ. Information on getting and using CD's on the Atari. Regular updates to this can be found in my pages.
- GDOS FAQ by Gerd Castan. Got a question on GDOS then this is the place to look.

Newsletters
~~~~~~~~~~~

Although there may be more to come the following newsletters are updated promptly as I receive them:

- CAIN Newsletter containing the latest Atari news.
- HENSA Newsletter containing the latest updates to the HENSA Atari archive.

****

Questions and Answers
~~~~~~~~~ ~~~ ~~~~~~~

Submit your questions to here and get them included in this page. Answers are open to anyone who has something valid to say, and help is provided to me on Programming and Music questions by several knowledgeable sources. Please support this section, only by your interaction and questions will it survive. All answers are included in this page for anyone else with the same question and answers are also sent back to the person who submitted the question for those without Web access.

If you feel you have an expertise in a particular area concerning the Atari and would be willing to answer questions on that area when and if I submitted them to you, then please let me know and you can join the team. Programming and Music are fairly well covered and I can cover Graphics programs, help with Technical questions would be appreciated.

****

Reviews
~~~~~~~~~

~~~~~~~

Here I hope to include reviews of Atari products both new an old. So far I have the following reviews:

- Kobold review by Andy Curtis (ST Format)
- Flash 2 review by Frank Charlton (ST Format)

There are several reviews on the way by the above mentioned people aswell as some by myself (waiting to get hold of Apex Media for the Falcon). This section should hopefully include around ten or more reviews by Christmas.

Again if you feel you would like to submit reviews for inclusion then please write to me. Please note these pages don't include Lynx and Jaguar Reviews, as they are contained within their own pages.

****

Updates and Information on these Web Pages
~~~~~~~ ~~~ ~~~~~~~~~~ ~~ ~~~~~ ~~~ ~~~~~

All updates and news on the Atari Web pages goes in here. Previews of whats to come soon are included and new items or updates to the pages are listed according to date with the most recent being first. Most updates contain links to the new material for instant access.

Other things to be found in here are the number of accesses to the Atari pages. At the moment this is out of date, but I hope soon to have this updated on either a monthly or even weekly basis.

****

This now concludes the Miscellaneous section. Now onto the Other Pages. These pages are specific to a particular machine, or collection of machines. These are going to go through some major changes and you can expect a fair number of changes to be made to these in the next month or so.

****

Falcon Page
~~~~~~ ~~~~

This will contain information and files relevant to the Atari Falcon, currently this page is divided into the following areas:

News and Previews
~~~~ ~~~ ~~~~~~~~

In here expect to see any news or previews that come my way, whether they be small descriptions or full features with pictures. At the moment there is:

- Apex News. This contains some information I got on Apex Media for the Falcon when I spoke to Douglas Little on the phone a few weeks back. Not very

  detailed unfortunately, but I'm waiting on my copy of Apex to give a full
  review so expect that to be rectified soon.
- Dextrous News. Small description of some of the features of Dextrous with a
  picture. Only at an early stage of development, if I hear more it will go in
  here.
- Towers II : Plight of the Stargazer. Pictures and description of this great
  looking Falcon only sequel to Towers. Expect the demo soon.
- Newsletters from HENSA on Falcon section of archive.

Misc
~~~~

Miscellaneous information on the Falcon, including:

- Falcon Demo FAQ. List of Demos for the Falcon, including some form of
  information on each.
- Compatibility list of games with Falcon.
- Compatibility list of applications with Falcon.

New Software
~~~ ~~~~~~~~

The latest Falcon/enhanced software available for download. Major revisions to
be done with updates here. At the moment the following software is included,
with more to come:

- Play MPEG v0.68 by M.D.Griffths (shareware)
- Speed of Light v3.5 (shareware picture viewer)
- FOG issue 6 diskmagazine for Falcon
- Scape a planetary landsacpe generator.
- Digital Tracker demo of commercial version.
- Obsession 1 level demo.

Other software worth having
~~~~~ ~~~~~~~~ ~~~~~ ~~~~~~

Software worth using on the Falcon.

- Backward v2.52. For compatibility with the ST. Please send any versions
  which are newer than this.
- MultiBlow. Configurable overscan utility.
- Starball. Excellent pinball game (Falcon enhanced).
- Berzerk. Excellent version of Berzerk (Faster on Falcon).

               ****

Atari ST/STE/TT/Mega STE Page
~~~~~ ~~~~~~~~~~~~~~~~~ ~~~~

This will contain information and files relevant to all the above mentioned

Atari formats, currently this page is divided into the following areas:

News
~~~~

In here expect to see any news or previews that come my way, whether they are small descriptions or full features with pictures. At the moment there is:

- Newsletters from HENSA on TOS section of archive.

New Software
~~~ ~~~~~~~~

The latest (most recent versions) software available for download. Major revisions to be done with updates. At the moment the following software is included, with lots more to come:

- Speed of Light v3.5 (shareware picture viewer).
- ST Zip v2.6. Latest version of ST Zip.
- Obsession demo. 1 level of this great pinball game.

Other Software worth having
~~~~~ ~~~~~~~~ ~~~~~ ~~~~~~

Software worth having on the Atari.

- Ozone. Good platform/puzzler.
- Starball. Excellent pinball game.
- Berzerk. Excellent version of Berzerk.

****

Lynx Page
~~~~ ~~~~

All the latest news and reviews on the lynx, along with cheats, etc. This page is divided in to the following areas:

News
~~~~

News on the Lynx and related material. At the moment there is:

- Lynx Summer Steal Deal Extended to the Fall. News of price reductions for a limited period.

Reviews
~~~~~~~

Reviews for just about every Lynx game ever released will appear in here. All

reviews are by Robert Jung. At the moment the following reviews are included:

APB	Awesome Golf	Baseball Heroes
Batman Returns	Basket Brawl	Bill and Ted's
BlockOut	BattleWheels	Blue Lightning
California Games	Checkered Flag	Chip's Challenge
Crystal Mines II	Dino Olympics	Dirty Larry:Renegade Cop
Dracula the Undead	Double Dragon	Desert Strike
Electro Cop	European Soccer Chal.	Ultimate Chess Chal.
Gauntlet:3rd Encounter	Gordo 106	Hard Driven'
Hockey	Hydra	Ishido : Way of Stones
Jimmy Conners' Tennis	Joust	

Other Lynx Stuff
~~~~~ ~~~~ ~~~~~

Other items of interest to Lynx owners. At the moment there is the following:

- Lynx FAQ

New Software Anouncement
~~~ ~~~~~~~~ ~~~~~~~~~~

Currently holds news of Bouble Trouble and Super Off-Road for the Lynx. Expect reviews soon.

****

Jaguar Page
~~~~~~ ~~~~

All the latest news and reviews on the lynx, along with cheats, etc. This page is divided in to the following areas:

News and Previews
~~~~ ~~~ ~~~~~~~~

All the latest news and preview information I can find related to the Jaguar. Although empty at the moment expect this to fill up very soon (lots to come).

Reviews
~~~~~~~

A collection of reviews from different sources, hopefully I will be contributing more to this section myself. Reviews so far include:

Aliens versus Predator	Raiden	Tempest 2000
Cybermorph		
~~~~~~~

There are many more reviews to come.

Other Jaguar Stuff

Miscellaneous information on the Jaguar. Information included presently is:

- Jaguar FAQ
- Raiden Tips
- Jaguar Game Cheats
- Kasumi Ninja FAQ
- Ultra Vortex FAQ

Other Jaguar Pages

Other pages specific to the Jaguar included in here. Currently there is:

- Atari Jaguar Homepage by Nils Jacobsen

There are others that will be included, some containing more recent news, but the one above is the most organised and intuitive one I've came across.

****

8 Bit Atari Page by Ivo van Poorten

Not maintained by me these pages cover the 8 bit formats of Atari machines and are very comprehensive. Nearly everything you could hope to find is contained within these pages.

****

What to expect in the future

Some structural changes are likely to appear in the next months. I will be introducing an announcements page where you can tell the World of anything you have to announce. Please send news of updates to your programs, Atari stuff for sale, and any other Atari announcements here (NOTE : Commercial companies should send information on products to be included in here and in the news sections).

Also coming soon will be a monthly editorial. In this I will try and sum up the month past and to give my opinions on how I saw things for Atari at that time. Hopefully I will be able to look back over many good developments in my pages and summarise them as they happened.

There is an outside possibility of starting a programmers and MIDI section in these pages but this is as yet undecided. I will judge whether or not to do

this based on the kind of response I have. I do not want to repeat any of the good work done in these fields however by other Web page writers such as Christer Gustavsson.

More support is needed for the questions and answers pages, although initially successfull people just stopped posting their questions. Although the odd one is still coming and answers are still forthcoming. Please support this, it is of benefit to anyone who uses it.

The Jaguar section should have a lot more news, pictures and reviews in the future. I now own a Jaguar and will soon be writing a review for Aliens vs Predator. I have tracked down a fair bit of news and am in contact with a few companies now and hope to get news from them on there products.

Extra pictures will appear due to my recent access to a colour scanner, enabling me to scan the latest pictures before the exist elsewhere on the Internet. I also hope to slowly get all the maps for AvP into these pages somehow?

Both the ST and Falcon sections should contain much more news in the future, along with more of the best PD/Shareware, and PD/Shareware reviews. I should have several demos hopefully in the near future for games coming out on these formats.

The Lynx section is to continue to get reviews and I will update the news as and when I get it.

Expect more links to Atari related pages in the future, aswell as links to all the Atari related newsgroups. There will be more newsletters, documents, updates to the FAQ's, I hope to include AEO soon also.

Expect further reviews from Andy and Frank, along with myself (watch out for the Apex Media review). Hopefully I can include more screenshots, and do a few program tutorials.

Last but not least, after Christmas I may set up a feedback page, where you can send your feedback via a Web form. Until then please write with your ideas, critisms, comments, submissions (software, news, reviews, questions, etc), to me and don't forget that I am now the official maintainer of the Atari FTP list originally by Hallvard Tangeraas. All updates to this list should now be sent to me.

Thank you and see you with the updates to these pages next month!

For those of you computer owners that would love to see Atari do well with the Jaguar so they can get back to the personal computer industry, you can help make the Jaguar successful.

The following is a list of popular game software companies that could help the Jaguar out tremendously if they developed for it.

I ask that you write these companies and encourage them to make games for the Jaguar. Thank you!

END OF THE YEAR Jaguar Letter Writing Campaign

Organized by: Len Stys

E-mail: aa399@cleveland.freenet.edu

id Software
WMS Industries Inc.
Capcom USA Inc.
Electronic Arts Inc.

>>>>>>>>>>>>>>>>>>>>>>>>> id Software <<<<<<<<<<<<<<<<<<<<<<<<<

The letter to id Software should thank the company for producing Wolfenstein 3-D and DOOM for the Jaguar and encourage the company to make QUAKE for the Jaguar.

id Software's e-mailing address:

Jay Wilbur, CEO
id Software
Town East Tower
18601 LBJ Freeway
Suite 615
Mesquite, Texas 75150

The following is a list of things which you may want to say in your letter to id Software:

Dear Mr. Wilbur,

1) How much you enjoy Jaguar Wolfenstein 3-D and/or DOOM.
2) How much you like id Software.
3) Thanks for making Wolfenstein 3-D and DOOM for the Jaguar.
4) How you are excited about id Software making games for the Jaguar.
5) How you would like to see QUAKE made for the Jaguar.
6) Thank you to Mr. Wilbur for reading your letter.

Another thing which you may want to include in this letter is concerning the Jaguar resolutions. It is possible for id Software to release DOOM II for Jaguar next year. If you would like to see DOOM II for the Jaguar, encourage the company to make it. But if you do encourage them to make it, ask that it support modem and at least four players networked. Also, ask for the company to place DOOM II on cartridge so that public domain maps can be released on CD for Jaguar's CD-ROM player. This will make sure that DOOM II -never- gets boring on the Jaguar and multi-playing is always exciting.

>>>>>>>>>>>>>>>>>>>>>> WMS Industries Inc. <<<<<<<<<<<<<<<<<<<<<<

As of December 1, 1994, Mortal Kombat II has not been announced for the Jaguar. And Acclaim has no plans to produce Mortal Kombat for the Jaguar. But next year, WMS Industries will be able to release Mortal Kombat II for any game system that the company wishes to release it for. The time is now to let WMS Industries know that we want to see Mortal Kombat II and Mortal Kombat III for the Jaguar.

Mortal Kombat II is by far the #1 most wanted game for the Jaguar according to the Most Wanted Games for the Jaguar list by CAIN Newsletter. If this game is released for the Jaguar, the Jaguar will be the most wanted game system.

The mailing address of WMS Industries Inc. is:

Louis J. Nicastro, CEO
WMS Industries Inc.
3401 North California Ave.
Chicago, IL 60618-5889

OK. I don't think I have to remind you that you should write as neat and as professional as possible to get the best results. If you certify your

letter, you may even reach the president with your letter.

The following is a list of things in which you may want to say in your letter to WMS Industries Inc.:

Dear Mr. Nicastro,

1) How much you enjoy Mortal Kombat II
2) How you like the games that WMS Industries makes.
3) How you enjoy the Atari Jaguar.
4) How you think the Atari Jaguar is the only game system that will do the game justice.
5) How you will run out and get the game for the Jaguar as soon as it is released.
6) How you would also like to see Jaguar be the first system to get Mortal Kombat III.
7) Thank you to Mr. Nicastro for reading your letter and for considering making Moral Kombat II for the Jaguar.

>>>>>>>>>>>>>>>>>>>>>>> Capcom USA INC. <<<<<<<<<<<<<<<<<<<<<<<

Capcom is known for producing the Street Fighter II series of games. The company is also known for producing games such as The Great Circus Mystery Starring Mickey & Minnie Mouse, Demon's Crest, and Saturday Night Slam Masters. The company also does conversions of popular titles such as Wizardry V and Eye of the Beholder.

Super Street Fighter II Turbo is second only to Mortal Kombat II on the most wanted games for the Jaguar CAIN Newsletter listing. If the game existed for the Jaguar, it would no doubt sell a lot of Jaguars. But Capcom is not making Super Street Fighter for the Jaguar and no plans have been announced to do so in the near future.

The strange thing is that Capcom is making Super Street Fighter II Turbo for the 3DO platform. The game will even have better graphics than that on the SNES and Genesis. But this only means that if Capcom will make a version of SSFIIT for a much higher-priced system than there is a chance that the company will be willing to make a Jaguar version.

The mailing address for Capcom USA Inc. is:

Scott Smith
Product-Development Coordinator
Capcom USA Inc.
475 Oakmead Parkway
Sunnyvale, CA 94086

The following is a list of things in which you may want to say in your letter to Capcom USA Inc.:

Mr. Smith,

1) How much you enjoy Street Fighter at the arcades.
2) How you like the games that Capcom makes.
3) How you enjoy the Atari Jaguar.
4) How you think the Atari Jaguar is the only game system that will do the game justice.
5) How you will run out and get Super Street Fighter II Turbo for the Jaguar as soon as it is released.
6) Thank you to Mr. Smith for reading your letter and for considering making Super Street Fighter II Turbo for the Jaguar.

You may also want to FAX Capcom USA by the phone number: 408/774-3995. But sending mail through the U.S. Postal Service may prove to be more successful.

>>>>>>>>>>>>>>>>>>>> Electronic Arts Inc. <<<<<<<<<<<<<<<<<<<<

Electronic Arts is the publisher of some incredible games such as: NBA Showdown, FIFA International Soccer, PGA European Tour Golf, NHL Hockey '94, Wing Commander, Super Wing Commander, John Madden NFL Football, Escape from Monster Manner, Twisted, Mario Andretti Racing, MLBPA Baseball, and many more! Electronic Arts also owns several other software companies that they may give the OK to develop the Jaguar for if they see there is a demand for Jaguar games.

Unfortunately, Electronic Arts is also a major backer of 3DO, a company that is a big competitor of Atari Corp. Electronic Arts is spending a lot of time and money on making games for 3DO that it could be spending on the Jaguar.

There is hope though! Electronic Arts is a licensee. This means that the company has Jaguar developers units. Electronic Arts' management just has to give the OK to make games for the Jaguar.

The mailing address for Electronic Arts Inc. is:

Lawrence F. Probst III, President
Electronic Arts Inc.
1450 Fashion Isle. Blv.
San Mateo, CA 94404

The following is a list of things in which you may want to say in your letter to Electronic Arts:

Dear Mr. Probst,

1) How much you enjoy Electronic Arts games.
2) How you have been buying Electronic Arts games for your computers since the company was started (if this is true).
3) How much you enjoy your Atari Jaguar.
4) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.

5) The games that you would love to slee on the Jaguar (choose two or three Electronic Arts games--I'm choosing John Madden NFL Football!).
6) How you believe Electronic Arts games will be unbelievable when using the graphics and sound capabilities of the Jaguar.
7) How you will run out and buy Electronic Arts' games when they are produced for the Jaguar.
8) Thank you to Mr. Probst for reading your letter and a thank you for considering producing games for the Jaguar.

Sierra On-Line Inc.
Dynamix Inc.
LucasArts Entertainment Co.
NovaLogic

>>>>>>>>>>>>>>>>>>>>>>>> Sierra On-Line Inc. <<<<<<<<<<<<<<<<<<<<<<<<

Sierra On-Line is a company that is well-known for their role-playing games such as their Space Quest and Police Quest series. The company is also known for their latest hits in the PC world: Gabriel Knight, Aces Over Europe, and Leisure Suit Larry VI. Sierra On-Line is planning to release their new title, Phantasmagoria, very soon.

Sierra On-Line is definitely a company that needs to be developing for the Jaguar if the Jaguar CD-ROM is to become used. If Sierra On-Line starts making games for the Jaguar CD-ROM, several other companies will make games for it as well.

The mailing address for Sierra On-Line is:

Kenneth A. Williams, President
Sierra On-Line Inc.
P.O. Box 485
Coarsegold, CA 93614

The following is a list of things in which you may want to say in your letter to Electronic Arts:

Dear Mr. Williams,

1) How much you enjoy Sierra On-Line games.
2) How you have been buying Sierra On-Line games for your computer since the company started making computer games (if this is true).
3) How much you enjoy your Atari Jaguar.
4) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
5) How you would like to see Sierra On-Line producing several Jaguar CD-ROM games.
6) The games you would love to see on the Jaguar (choose two or three Sierra On-Line games).
7) How you believe Sierra On-Line games would be fantastic on the Atari Jaguar.
8) How you will run out and buy Sierra On-Line games when they are

made for the Jaguar.
9) Thank you to Mr. Williams for reading your letter and for considering producing games for the Jaguar.

In my letter, I will also be encouraging Mr. Williams to make games which have the option of using a keyboard with the Jaguar. A keyboard can be created for the Jaguar and Sierra On-Line could work with Atari Corp. to produce one for it. The use of a keyboard in role-playing games help children learn words. This is something that Sierra has gotten away from in PC games.

I'm also writing Sierra to release HOYLE Card Games for the Jaguar. I love this game and it would be great to see a modem feature being used in the Jaguar version of this game.

>>>>>>>>>>>>>>>>>>>>>>>>>> Dynamix Inc. <<<<<<<<<<<<<<<<<<<<<<<<<

Dynamix Inc. is a game company owned by Sierra On-Line. This game company makes many wonderful titles for the PC such as: Betrayal at Kronder, Aces of the Pacific, and Front Page Sports Football Pro. The company is planning to release: Front Page Baseball, Battledrome, LodeRunner: A Legend, MetalTech: Earth Siege, Alien Legacy, and an excellent reviewed game called Aces of the Deep (submarine game).

Dynamix Inc. is making some real great games and these games would be a very good addition to the present Jaguar game library.

The mailing address for Dynamix Inc. is:

Alan Higginson
Executive Vice-President
Dynamix Inc.
P.O. Box 978
Oakhurst, CA 93644-0978

The following is a list of things in which you may want to say in your letter to Dynamix Inc.:

Dear Mr. Higginson,

1) How you enjoy Dynamix games on the PC.
2) How much you enjoy your Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) The games that you would love to see on the Jaguar (choose two or three Dynamix games--I'm choosing Front Page Sports Football, Alien Legacy, and Aces of the Deep).
5) How you believe Dynamix games will be unbelievable when using the graphics and sound capabilities of the Jaguar.
6) How you will run out and buy Dynamix games when they are produced for the Jaguar.

7) Thank you to the person for reading your letter and for considering producing games for the Jaguar.

>>>>>>>>>>>>>>>>>>> LucasArts Entertainment Co. <<<<<<<<<<<<<<<<<<

LucasArts is famous for making games based on popular movies. The company has also has several popular titles out for the PC. Some of these titles are: Star Wars Rebel Assault, X-Wing, Indiana Jones and the Fate of Atlantis, Monkey Island 2: Le chuck's Revenge, and Day of the Tentacle. And if there is any truth to the rumor of a new Indiana Jones movie, LucasArts will probably make a great game based on this movie.

The mailing address for LucasArts is:

LucasArts Entertainment Co.
LucasArts Games Division
P.O. Box 10307
San Rafael, CA 94912

The following is a list of things in which you may want to say in your letter to LucasArts:

Dear Sir or Madam,

1) How much you enjoy LucasArts games.
2) How much you enjoy the Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) The games you would love to see on the Jaguar (choose two or three LucasArts games).
5) How you believe LucasArts games would be fantastic on the Atari Jaguar.
6) How you will run out and buy LucasArts games when they are made for the Jaguar.
7) Thank you to the person for reading your letter and for considering producing games for the Jaguar.

You may also want to FAX LucasArts by the phone number: 415/721-3344.

>>>>>>>>>>>>>>>>>>>>>>>>>>>> NovaLogic <<<<<<<<<<<<<<<<<<<<<<<<<<<<

NovaLogic is known for its high-quality games on the PC. The president and CEO, John Garcia makes sure each game title released is of the highest quality. NovaLogic is known for producing Comanche: Maximum Overkill (a game title that rated high on the Most Wanted Games for the Jaguar listing from CANI Newsletter). The company also produced WolfPack (a submarine simulator) and UltraBots. The latest and greatest game from NovaLogic is Armored Fist. This game is highly praised by reviewers that have seen it.

John Garcia is interested in producing modem games and networking games

in the future. NovaLogic's games would be a great addition to the Jaguar game library.

The mailing address for NovaLogic is:

John Garcia, President
NovaLogic
19510 Ventura Blvd.
Suite 200
Tarzana, CA 91356

The following is a list of things in which you may want to say in your letter to NovaLogic:

Dear Mr. Garcia,

1) How much you enjoy NovaLogic games.
2) How much you enjoy your Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) The games that you would love to see on the Jaguar (choose a couple of NovaLogic games).
5) How you believe that NovaLogic games will be even more fantastic when using the graphics and sound capabilities of the Jaguar.
6) How you would like to see NovaLogic games that use the Jaguar voice-modem and networking capabilities.
7) How you will run out and buy NovaLogic games when they are produced for the Jaguar.
8) Thank Mr. Garcia for reading your letter and for considering producing games for the Jaguar.

You may also want to FAX NovaLogic by the phone number: 818/774-0684. Please consider writing NovaLogic through the U.S. mail first and then FAX NovaLogic.

Virgin Games
Spectrum Holobyte
Psygnosis
Origin Systems

>>>>>>>>>>>>>>>>>>>>>>>>> Virgin Games <<<<<<<<<<<<<<<<<<<<<<<<<

Virgin Games is already a Jaguar developer, so this letter is mainly to thank the company and to encourage them to make more titles for the Jaguar. Virgin is suppose to be making Cannon Fodder, Demolition Man, and Dragon for the Jaguar. The company is also planning to make a CD-ROM game called Creature Shock for the Jaguar.

Virgin Games is known for making a popular PC CD-ROM game called: The 7th Guest. It has also made Land of Lore, Dune II, and Indy Car Racing. It will also be releasing 11th Hour and Command & Conquer for the PC soon.

The mailing address for Virgin Games is:

Virgin Games
18061 Fitch Avenue
Irvine, CA 92714

The following is a list of things in which you may want to say in your letter to Virgin Games:

Dear Sir or Madam,

1) How you enjoy Virgin Games' games.
2) How much you enjoy the Atari Jaguar.
3) How you are really happy that Virgin Games is making games for the Jaguar.
4) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
5) How you would like to see other popular games such as The 7th Guest (and name a few) besides the ones the company is already making for the Jaguar.
6) How you would like to see the Jaguar modem and network features used in Virgin Games' software (OPTIONAL).
7) How you will run out and buy Virgin Games' games when they are produced for the Jaguar.
8) Thank you to the person for reading your letter and for producing games for the Jaguar.

You may also want to FAX Virgin Games by the phone number: 714/833-8717.

>>>>>>>>>>>>>>>>>>>>>>> Spectrum Holobyte <<<<<<<<<<<<<<<<<<<<<<<

Spectrum Holobyte is famous for their Falcon flight simulator game. The game can even be played through the modem on PCs. Spectrum Holobyte has just released Fields of Glory and is rumored to be working on Falcon 4.0.

Modem games is something that a game system must have if it will be successful in the future. And Spectrum Holobyte is well-known for their modem games. Falcon 4.0 sounds like it would be perfect for the Jaguar.

The mailing address for Spectrum Holobyte is:

Barry J. Folsom, President
Spectrum Holobyte
2490 Mariners Square Loop
Alameda, CA 94501

The following is a list of things in which you may want to say in your letter to Spectrum Holobyte:

Dear Mr. Folsom,

1) How much you enjoy Spectrum Holobyte games.
2) How much you enjoy your Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) How you would like to see Falcon 4.0 with voice-modem and networking capabilities on the Jaguar.
5) How you would like to see Fields of Glory and other Spectrum Holobyte games for the Jaguar.
6) How you believe Spectrum Holobyte games will be unbelievable when using the graphics and sound capabilities of the Jaguar.
7) How you will run out and buy Spectrum Holobyte games when they are produced for the Jaguar.
8) Thank Mr. Folsom for reading your letter and for considering producing games for the Jaguar.

You may also want to FAX Spectrum Holobyte by the phone number: 510/522-2138. But please keep in mind that sending a letter through the U.S. Postal Service may be more effective.

>>>>>>>>>>>>>>>>>>>>>>>>> Psygnosis <<<<<<<<<<<<<<<<<<<<<<<<<

Psygnosis is a well known producer of video games. A few of Psygnosis' popular games are Microcosm, Shadow of the Best II, and Puggsy. A recent game is Hexx: Heresy of the Wizard. TThe company has also done Lemmings.

The mailing address for Psygnosis is:

Psygnosis
675 Massachusetts Ave.
Cambridge, MA 02139

The following is a list of things in which you may want to say in your letter to Psygnosis:

Dear Sir or Madam,

1) How much you enjoy Psygnosis games.
2) How much you enjoy your Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) The games that you would love to see on the Jaguar (choose a couple of Pysgnosis games).
5) How you believe Psygnosis games will be unbelievable when using the graphics and sound capabilities of the Jaguar.
6) How you will run out and buy Psygnosis games when they are produced for the Jaguar.
7) Thank the person for reading your letter and for considering producing games for the Jaguar.

You may also want to FAX Psygnosis by the phone number: 617/497-6759.

>>>>>>>>>>>>>>>>>>>>>>>>>> Origin Systems <<<<<<<<<<<<<<<<<<<<<<<<<

Origin Systems is a maker of many popular PC role-playing and action games. The company is owned by Electronic Arts but may have freedom to develop for any system it wishes. Some of the games that Origin makes are: Ultima series (most recently Ultima VIII: Pagan), Wing Commander Privateer, and just recently Pacific Strike. Origin will be also making Biforge and Wings of Glory.

Since Origin Systems is a subsidary of Electronic Arts, there is no specific person to write.

The mailing address for Origin Systems is:

Origin Systems
Attn: Production Teams
P.O. Box 161750
Austin, TX 78716

The following is a list of things in which you may want to say in your letter to Origin Systems:

Dear Sir or Madam,

1) How much you enjoy Origin Systems games.
2) How much you enjoy your Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) The games that you would love to see on the Jaguar (choose two or three Origin Systems games).
5) How you wish the Origin Systems Production Teams will attempt to get these great games on the Jaguar.
6) How unbelievable Origin Systems games will be when using the graphics and sound capabilities of the Jaguar.
7) How you will run out and buy Origin Systems games when they are produced for the Jaguar.
8) A thank you to the person reading for reading your letter and for considering producing games for the Jaguar.

QQP, Inc.
Broderbund
Konami
MicroProse

>>>>>>>>>>>>>>>>>>>>>>>>>>> QQP, Inc <<<<<<<<<<<<<<<<<<<<<<<<<<<

Many people are not familiar with QQP, but the company has released some pretty amazing games for the PC. Some of the games are: Solitaire's Journey, Merchant Prince, The Perfect General, Conquered Kingdoms, and

their most recent--Origamo.

Most of the games that QQP makes either has to do with strategy or war. Strategy games are always popular, but war games have been restricted to PCs due to lack of a "save game" feature on video game systems. Jaguar can save games on its cartridges so this is no longer a problem in getting war games to home video game systems.

The mailing address for QQP, Inc. is:

QQP, Inc.
495 Highway 202
Flemington, NJ 08822

The following is a list of things in which you may want to say in your letter to QQP:

Dear Sir or Madam,

1) How much you enjoy strategy games.
2) How much you enjoy your Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) The games that you love to see on the Jaguar (choose two or three QQP games).
5) How you would like to see these games make use of Jaguar's voice-modem and networking capabilities.
6) How you believe QQP games will be unbelievable when using the graphics and sound capabilities of the Jaguar.
7) How you will run out and buy QQP games when they are produced for the Jaguar.
8) Thank you to the person for reading your letter and for considering producing games for the Jaguar.

>>>>>>>>>>>>>>>>>>>> Broderbund Software Inc. <<<<<<<<<<<<<<<<<<<<

Broderbund Software is well-known for producing two games. The first game is a CD-ROM game called Myst. The second is the Carmen Sandiego series of games. The Carmen Sandiego is educational.

The mailing address for Broderbund Software Inc. is:

Edmund R. Auer, President
Broderbund Software Inc.
500 Redwood Blvd.
Novato, CA 94948-6121

The following is a list of things in which you may want to say in your letter to Broderbund:

Dear Mr. Auer,

1) How much you enjoy Broderbund Software's games.
2) How much you enjoy your Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) How you would love to see Myst, Carmen Sandiego, and any other new Broderbund titles on the Jaguar.
5) How unbelievable Broderbund Software games will be when using the graphics and sound capabilities of the Jaguar.
6) How you will run out and buy Broderbund Software's games when they are produced for the Jaguar.
7) A thank you to Mr. Auer for reading your letter and for considering producing games for the Jaguar.

>>>>>>>>>>>>>>>>>>>>>>>>>>>> Konami Inc. <<<<<<<<<<<<<<<<<<<<<<<<<<<<

Konami makes several popular games. Among these are Double Dribble: The Playoff Edition, Lethal Enforcers 2, Batman the Animated Series, and a new game called Contra 4. The company has also made Rocket Knight Adventures, Teenage Mutant Ninja Turtles Tournament Fighters, Blades of Steel, Track & Field II, Top Gun: The Second Mission, and many others. Konami is also rumored to be developing Gradius for Sony's new PSX. Since Konami is already developing for other next generation systems, it may be more difficult to convince them to make games for the Jaguar. But Konami certainly does bring a lot of titles to a game system.

The mailing address of Konami is:

Konami Inc.
900 Deerfield Parkway
Buffalo Grove, IL 60089-4510

The folowing is a list of things in which you may want to say in your letter to Konami:

Dear Sir or Madam,

1) How much you enjoy Konami games.
2) How much you enjoy your Atari Jaguar.
3) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
4) The games that you would love to see on the Jaguar (choose a few Konami games).
5) How unbelievable Konami games will be when using the graphics and sound capabilities of the Jaguar.
6) How you will run out and buy Konami games when tey are produced for the Jaguar.
7) A thank you to the person for reading your letter and for considering producing games for the Jaguar.

>>>>>>>>>>>>>>>>>>>>>>>>>> MicroProse Inc. <<<<<<<<<<<<<<<<<<<<<<<<<

MicroProse is already developing Jaguar games so this letter will be mainly to thank MicroProse and encourage the company to make more of their games for the Jaguar. MicroProse is supposedly making Grand Prix, Gunship 2000, and possibly Star Trek: The Next Generation game. But MicroProse has made a lot of fantastic games for the PC that should really be made for the Jaguar. These include: World Circuit, Fleet Defender, Master of Orion, and Civilization. Civilization has already been made for the Falcon030 so it may not be too hard to convert the game to the Jaguar. Since Jaguar can save games on cartridge, it may be possible to make Civilization on the Jaguar. MicroProse is also making Across the Rhine, Colonization, and Masters of Magic.

MicroProse is indeed a very good company to have making Jaguar games. The quality has always been good and it would be nice for the company to make a lot of their games for the Jaguar.

The mailing address for MicroProse is:

Ronald J. Bueche, CEO
MicroProse Inc.
180 Lakefront Dr.
Hunt Valley, MD 21030-2245

The following is a list of things in which you may want to say in your letter to MicroProse:

Dear Mr. Bueche,

1) How much you enjoy MicroProse games.
2) How much you enjoy your Atari Jaguar.
3) How you are really glad that MicroProse is making games for the Jaguar.
4) How you feel that the Jaguar will be the video game system of the future due to its high-performance/low-price.
5) How you would like to see other popular games besides Gunship 2000 and Grand Prix be made for the Jaguar (name a few of your favorite MicroProse games).
6) How you would like to see the Jaguar voice modem and network capabilities used in MicroProse games. (OPTIONAL)
7) How you will run out and buy MicroProse games when they are produced for the Jaguar.
8) Thank you to Mr. Bueche for reading your letter and for making games for the Jaguar.

You may also want to FAX MicroProse at the phone number: 410/771-1174. But only FAX MicroProse if you do not have time to mail the letter or if you have already sent mail to the company.

```
                ***********************************
                *                                 *
     ************ LETTER WRITING CAMPAIGN FINISHED ************
                *                                 *
```

****

After you have done writing all of these companies, the letter writing campaign will be finished. If you have written all of these companies, the campaign will no doubt be successful and we will be seeing the games we want for the Jaguar very soon.

Please spread the word around about this letter writing campaign on online systems, BBSs, message areas, user groups, and any other place that you can help get the word out abuot this campaign.

Also, please tell your friends! It is very important to get everyone participating in this letter writing campaign!

********** THANK YOU! **********

ANNOUNCING version 0.26 of the Okami Newsreader.
==========

```
 OOOO
OO  OO   O K A M I
OO  OO
OO  OO   N E W S R E A D E R
 OOOO
```

==========

Okami (also known as O) is a suite of programs for storing, reading and generating Internet and Mausnet (German) news and mail offline. The current version supports both UUCP and SOUP for Internet.

The program has the following features:

- multi-window user interface
- up to 256 windows (if the operating system can handle them)
- newsgroup folds
- file browser
- semi-automatic PGP interface
- regular expression or string search
- built-in uuencode, uudecode, btoa, atob
- multi-volume message to file save
- Rot-13 and Rot-18 encryption
- built-in metric conversions
- thread walking
- pseudo newsgroup for outgoing messages (Outbound)
- pseudo newsgroups for mail and mail-archive
- built-in Mausnet support
- user-definable command-oriented keyboard layout
- configurable on-screen text effects
- configurable on-screen TEX conversion
- command shell interface
- user-definable quoting style
- cancel-message generation
- super smart signature system
- Hall of Fame

The program is now available on sally.informatik.rwth-aachen.de:
/pub/atari/uucp/o_026.zip, and will be uploaded soon to
atari.archive.umich.edu, micros.hensa.ac.uk, and ftp.cnam.fr.

I've just uploaded the first shareware version of my game TETRHEX
to ftp.cnam.fr and ftp.uni-erlangen.de. It's a Falcon (only) game
and looks like a hexagonal tetris.

Note: a version with complete doc and other rules will certainly
be available after the Xmas holidays.

Subject: Necromunda Demo by Paranoia
Message-ID: <D0I0wI.1AI@world.std.com>
Sender: Lexicor@world.std.com (ysiu@lexicor.com)
Organization: Lexicor Software Corporation
Date: Thu, 8 Dec 1994 15:41:05 GMT
Approved: Lexicor@world.std.com
Lines: 35

Necromunda by Paranoia is a dedicated digital music demo for the STFM/STE range of computers. It comprises of a series of screens accessible via a groovy menu screen. The full menu screen requires 1MByte to run properly, but works in a somewhat reduced form on 0.5MBytes. The full range of actual screens is available to those with only 0.5MBytes, though. The demo was put together by Exarch, DNA and Akira (Paranoia) over the period from winter 1990 until summer 1994 and was intended as a sequel to the acclaimed 'Son et Lumiere Demo', which came out in summer 1990.

The November issue of ST Format Magazine features an interview with Paranoia and two tunes from the demo appear on the coverdisk. The music is of sufficient quality to be marketed in its own right, in tape form and is sold as an EP through the pages of Future Music Magazine.

The demo has so-far provoked considerable interest for both the unusually high quality of the music and the bizarre effects and questionable sanity of the authors. It is currently the only demo on the Floppyshop recomendations list. Sound may be heard in stereo via a Replay16 cart on the STFM, and no compatability problems with any of the ST range has appeared so

far.
        To download this demo for free, consult 'atari.archive.umich.edu' at
Florida State University in '/Demos/numcromun.lzh'.

Atari Web Pages Latest News

Version 1.0

Date 22/12/94

by

Mark Stephen Smith
~~~~ ~~~~~~~ ~~~~~

2nd Update
~~~ ~~~~~~

==========

Foreword
~~~~~~~~

Hello and welcome to the first news item on the Atari Web pages. This document will describe the Atari Web pages as provided by Mark Stephen Smith and will inlcude a list of the latest updates for the month. Each month I hope to update this text with the very latest additions and news on the Atari Web pages.

Hopefully these pages will provide an invaluable service to their users, but they are still at an early stage and developing all the time. As such any feedback and support you may have for these pages is more than welcome, it is infact encouraged. The more input I get from its users the better, as then I will know what is good and bad about these pages and can change them approproately in the hope of increasing their value to their readers.

Now on with the show.

==========

News and Changes
~~~~ ~~~ ~~~~~~~

Well since the original description a lot has happened. I'm now involved in several projects, and submit work to several Internet and diskmag sources for inclusion. I have also officially took over the maintenance of the Atari FTP list from Hallvard Tangeraas of which there have been a couple of updates.

New items in this document since the last copy will be marked with **. All new items are also listed below according to the date they were added.

The new items this month are:

22/12/94 -- Lynx Tips and Tricks
22/12/94 -- Ultra Vortex FAQ update for Jaguar
20/12/94 -- Lemmings Review for Lynx
20/12/94 -- Lynx Casino Review for Lynx
19/12/94 -- AEO Newsletter Volume 3. Issue.14 in text and ZIP format
12/12/94 -- Atari FTP List Update
12/12/94 -- Falcon Specifications and Information
12/12/94 -- Edith Professional Review by Frank Charlton
8/12/94 -- Falcon Owners Group Magazine No.7.
8/12/94 -- Newsletter format changed

8/12/94 -- AEO Newsletter Volume 3. Issue.13 in text and ZIP format
8/12/94 -- Questions and Answers pages updated, question 14.
6/12/94 -- Questions and Answers pages updated, questions 12 and 13.
6/12/94 -- CAIN Newsletter Volume 1. No.8
5/12/94 -- Got Doom on the Jaguar, expect a review soon.
2/12/94 -- Hand Made Software News (Jaguar)
2/12/94 -- Lynx FAQ updated
2/12/94 -- Jaquar FAQ updated
2/12/94 -- HENSA Atari TOS Newsletter Volume 7. No.11
28/11/94 -- Sensible Soccer News for Jaguar
25/11/94 -- MiNTNet FAQ
25/11/94 -- HENSA Atari TOS Newsletter Volume 7. No.10
24/11/94 -- Sinister Developments News (Jaguar)
24/11/94 -- Coming Soon! (Jaguar)
24/11/94 -- Rebellion Development News (Now in HTML)
24/11/94 -- Klax Review for Lynx
24/11/94 -- Kung Food Review for Lynx
23/11/94 -- A.9 added to Questions and Answers page.
23/11/94 -- Rebellion Development News

==========

What are the Atari Web pages?
~~~~ ~~~ ~~~ ~~~~~ ~~~ ~~~~~

These are a collection of pages covering all formats of the Atari. In these pages may be found the latest news, reviews, software for downloading, and various other information and links to other places of interest to Atari users.

I have tried to make the structure of these pages easy to follow and as intuitive as possible but there is still a lot of work to be done yet.

==========

How do I access them and what is the Web?
~~~ ~~ ~ ~~~~~~ ~~~~ ~~~ ~~~~ ~~ ~~~ ~~~

First of all I shall look at what the Web is or to use its full name the World Wide Web. The Web is new way of accessing the Internet, unlike previous methods where you were required to enter commands into the program you were using the Web uses a more user driven method of getting around the Internet. This method is much more graphical than former methods and as such is much easier to get to grips with.

When using a Web browser (the name given to a program used to access Web pages) the control method usually consists of a point and click operation. A Web page will consist of text and graphics which are sometimes highlighted in some way to indicate that they are selectable and link to more information or a particular piece of data.

Such a link is reffered to as a hyperlink. In fact the whole system is a variation on hypertext and uses a script to create each page. Each script is written to a HTML (HyperText Markup Language) standard which contains the main

body of text in the page and a few command tags for the browser as to how to format the page and what to do with links, etc.

Web pages may contain text, graphics, sounds, and animations, although the later two are normally supported through external software. It is also possible using the Web to gain access to newsgroups, ftp sites, and gopher services all through the one program. As such this makes this a very powerful tool for Internet access, and coupled with its ease of use this has suddenly became the big thing in the recent Internet explosion into the media.

Browsers can handle all properly written HTML scripts but may vary in operation when scripts are incorrect or contain mistakes. Browsers can be divided into to distinct types, graphical and text only. Popular graphical browsers include NCSA's Mosaic and the recent new browser NetScape. On the text side Lynx is the most popular textual browser (NOTE: text browsers don't show any form of graphics).

To access the Web you must either use one of the above mentioned browsers on a machine such as a Sun, PC or Mactintosh, or if you want to access it via your Atari you will need a copy of the Lynx browser as unfortunately there aren't any graphical browsers YET for the Atari.

Next month I will give full details on how to access the Web using the Atari.

==========

Where do I find the Atari Web page?
~~~~~ ~~ ~ ~~~~ ~~~ ~~~~~ ~~~ ~~~~

>From your Web browser choose to open URL and enter the following address:

http://www.dl.ac.uk/MISC/ATARI/atari.html

If you can store a hotlist of addresses or something similar on your browser then it may be worth including this address for quick access in the future.

Once you've done that you should see my main page so I hope you enjoy it, and don't forget to write with your thoughts.

==========

What you will find in the Web pages every month.
~~~~ ~~~ ~~~~ ~~~~ ~~ ~~~ ~~~ ~~~~~ ~~~~~ ~~~~~

>From the main menu you have several links available to you, some under miscellaneous and others specific to a particular machine, or collection of machines. First I will look at what will be in the Miscellaneous section.

****

Atari Related links, Documents, FAQ's and Newsletters
~~~~~ ~~~~~~~ ~~~~~ ~~~~~~~~~ ~~~~~ ~~~ ~~~~~~~~~~
~~~~~

First in the list are "Atari Related Links", these links are to other sources of Atari information or data (such as files, etc.).

There is a link to many of the major Atari holding FTP sites on the Internet. Links to several Web pages by different people on the Atari. This will grow as worthwhile sites come up. At the moment you can visit:

- HENSA to download Atari files (Moderated by Denesh Bhabuta)
- ZFC's Atari Pages by Annius V. Groenink. This has links to various Atari related places, along with talk of his own work on Edith and his new Drive U Project. Annius is also working on a version of the Mosaic browser for the Atari and the best of luck goes to him on that.
- Christer Gustavsson's Atari Gem Programmers Page. Very useful information for programmers grapling with Gem and the operating system. Also offers help via his questions answers page. Some links can be found to Atari related places.
- CAIN Atari Pages. CAIN is the Central Atari Information Network and they create a newsletter which is updately monthly on all things new to do with the Atari. There are also links available here.
- Martin Maisey's Atari Pages. Contains information (downloadable) on programs written by himself for the Atari. Again there are links to other Atari places.

This section has one or two more candidates for the near future when more work has been done on the owners pages.

Documents
~~~~~~~~~

Useful documents will appear in here. At the moment there is:

- Atari FTP List by Hallvard Tangeraas (essential for the latest news on who provides Atari FTP sites). This is updated in theses pages almost as soon as Hallvard changes it.
- Atari TOS Desktop Survival Kit by Thomas J Hopper. An essential guide to getting the most out of your DESKTOP.INF and NEWSDESK.INF files.
- Recommended list of software for the Atari by Denesh Bhabuta. List compiled by Denesh for me of his best software for the Atari (updates coming soon). Mostly PD and Shareware, this list contains links to download most of the software mentioned.
- Information on picture formats by Dave Bagget. Lots of information on the format of different picture files for the Atari.

FAQ's (Frequently Asked Questions)
~~~~~ ~~~~~~~~~~ ~~~~~ ~~~~~~~~~

Useful FAQ's will appear here. At the moment there is:

- Atari ST SLIP FAQ. This is a guide to connecting your Atari to a network. All you want to know about networks and the Atari.
- Atari CD FAQ. Information on getting and using CD's on the Atari. Regular updates to this can be found in my pages.
- GDOS FAQ by Gerd Castan. Got a question on GDOS then this is the place to look.

**MiNTNet FAQ by Christer Gustavsson. Everything you wanted to know about
**MiNTNet.

Newsletters
~~~~~~~~~~~

Although there may be more to come the following newsletters are updated promptly as I receive them. These have been re-organised to make it easier to keep track of. At the moment there is:

- CAIN Newsletter containing the latest Atari news.
- HENSA Newsletter containing the latest updates to the HENSA Atari archive.
**AEO Newsletter containing the latest Atari news.

****

Questions and Answers
~~~~~~~~~ ~~~ ~~~~~~~

Submit your questions to here and get them included in this page. Answers are open to anyone who has something valid to say, and help is provided to me on Programming and Music questions by several knowledgeable sources. Please support this section, only by your interaction and questions will it survive. All answers are included in this page for anyone else with the same question and answers are also sent back to the person who submitted the question for those without Web access.

If you feel you have an expertise in a particular area concerning the Atari and would be willing to answer questions on that area when and if I submitted them to you, then please let me know and you can join the team. Programming and Music are fairly well covered and I can cover Graphics programs, help with Technical questions would be appreciated.

****

Reviews
~~~~~~~

Here I hope to include reviews of Atari products both new an old. So far I have the following reviews:

- Kobold review by Andy Curtis (ST Format)
- Flash 2 review by Frank Charlton (ST Format)
**Edith Professional review by Frank Charlton (ST Format)

There are several reviews on the way by the above mentioned people aswell as some by myself (waiting to get hold of Apex Media for the Falcon). This section should hopefully include around ten or more reviews by Christmas.

Again if you feel you would like to submit reviews for inclusion then please write to me. Please note these pages don't include Lynx and Jaguar Reviews, as they are contained within their own pages.
~~~~~~~

****

Updates and Information on these Web Pages
~~~~~~~ ~~~ ~~~~~~~~~~ ~~ ~~~~~ ~~~ ~~~~~

All updates and news on the Atari Web pages goes in here. Previews of whats to come soon are included and new items or updates to the pages are listed according to date with the most recent being first. Most updates contain links to the new material for instant access.

Other things to be found in here are the number of accesses to the Atari pages. At the moment this is out of date, but I hope soon to have this updated on either a monthly or even weekly basis.

****

This now concludes the Miscellaneous section. Now onto the Other Pages. These pages are specific to a particular machine, or collection of machines. These are going to go through some major changes and you can expect a fair number of changes to be made to these in the next month or so.

****

Falcon Page
~~~~~~ ~~~~

This will contain information and files relevant to the Atari Falcon, currently this page is divided into the following areas:

News and Previews
~~~~ ~~~ ~~~~~~~~

In here expect to see any news or previews that come my way, whether they be small descriptions or full features with pictures. At the moment there is:

- Apex News. This contains some information I got on Apex Media for the Falcon when I spoke to Douglas Little on the phone a few weeks back. Not very detailed unfortunately, but I'm waiting on my copy of Apex to give a full review so expect that to be rectified soon.
- Dextrous News. Small description of some of the features of Dextrous with a picture. Only at an early stage of development, if I hear more it will go in here.
- Towers II : Plight of the Stargazer. Pictures and description of this great looking Falcon only sequel to Towers. Expect the demo soon.
- Newsletters from HENSA on Falcon section of archive.

Misc
~~~~

Miscellaneous information on the Falcon, including:

- Falcon Demo FAQ. List of Demos for the Falcon, including some form of

  information on each.
- Compatibility list of games with Falcon.
- Compatibility list of applications with Falcon.
**Falcon Specifications and Information compiled by Rod McCall.

New Software
~~~ ~~~~~~~~

The latest Falcon/enhanced software available for download. Major revisions to be done with updates here. At the moment the following software is included, with more to come:

- Play MPEG v0.68 by M.D.Griffths (shareware)
- Speed of Light v3.5 (shareware picture viewer)
- Scape a planetary landsacpe generator.
- Digital Tracker demo of commercial version.
- Obsession 1 level demo.
**FOG issue 7 diskmagazine for Falcon.

Other software worth having
~~~~~ ~~~~~~~~ ~~~~~ ~~~~~~

Software worth using on the Falcon.

- Backward v2.52. For compatibility with the ST. Please send any versions
  which are newer than this.
- MultiBlow. Configurable overscan utility.
- Starball. Excellent pinball game (Falcon enhanced).
- Berzerk. Excellent version of Berzerk (Faster on Falcon).
- FOG issue 6 diskmagazine for Falcon.

               ****

Atari ST/STE/TT/Mega STE Page
~~~~~ ~~~~~~~~~~~~~~~~~ ~~~~

This will contain information and files relevant to all the above mentioned Atari formats, currently this page is divided into the following areas:

News
~~~~

In here expect to see any news or previews that come my way, whether they are small descriptions or full features with pictures. At the moment there is:

- Newsletters from HENSA on TOS section of archive.

New Software
~~~ ~~~~~~~~
~~~

The latest (most recent versions) software available for download. Major revisions to be done with updates. At the moment the following software is included, with lots more to come:

- Speed of Light v3.5 (shareware picture viewer).
- ST Zip v2.6. Latest version of ST Zip.
- Obsession demo. 1 level of this great pinball game.

Other Software worth having
~~~~~ ~~~~~~~~ ~~~~~ ~~~~~~

Software worth having on the Atari.

- Ozone. Good platform/puzzler.
- Starball. Excellent pinball game.
- Berzerk. Excellent version of Berzerk.

****

Lynx Page
~~~~ ~~~~

All the latest news and reviews on the lynx, along with cheats, etc. This page is divided in to the following areas:

News
~~~~

News on the Lynx and related material. At the moment there is:

- Lynx Summer Steal Deal Extended to the Fall. News of price reductions for a limited period.

Reviews
~~~~~~~

Reviews for just about every Lynx game ever released will appear in here. All reviews are by Robert Jung. At the moment the following reviews are included:

APB	Awesome Golf	Baseball Heroes
Batman Returns	Basket Brawl	Bill and Ted's
BlockOut	BattleWheels	Blue Lightning
California Games	Checkered Flag	Chip's Challenge
Crystal Mines II	Dino Olympics	Dirty Larry:Renegade Cop
Dracula the Undead	Double Dragon	Desert Strike
Electro Cop	European Soccer Chal.	Ultimate Chess Chal.
Gauntlet:3rd Encounter	Gordo 106	Hard Driven'
Hockey	Hydra	Ishido : Way of Stones
Jimmy Conners' Tennis	Joust	

New reviews are:

Klax Kungfood Lemmings
Lynx Casino

Other Lynx Stuff
~~~~~ ~~~~ ~~~~~

Other items of interest to Lynx owners. At the moment there is the following:

- Lynx FAQ
**Lynx Tips and Tricks

New Software Anouncement
~~~ ~~~~~~~~ ~~~~~~~~~~

Currently holds news of Bouble Trouble and Super Off-Road for the Lynx. Expect reviews soon.

****

Jaguar Page
~~~~~~ ~~~~

All the latest news and reviews on the lynx, along with cheats, etc. This page is divided in to the following areas:

News and Previews
~~~~ ~~~ ~~~~~~~~

All the latest news and preview information I can find related to the Jaguar.

**Rebellion Development News
**Sinister Developments News
**Sensible Soccer News
**Coming Soon!
**Hand Made Software News

Reviews
~~~~~~~

A collection of reviews from different sources, hopefully I will be contributing more to this section myself. Reviews so far include:

Aliens versus Predator Raiden Tempest 2000
Cybermorph

There are many more reviews to come.
~~~~~~~

Other Jaguar Stuff
~~~~~ ~~~~~~ ~~~~~

Miscellaneous information on the Jaguar. Information included presently is:

- Jaguar FAQ
- Raiden Tips
- Jaguar Game Cheats
- Kasumi Ninja FAQ
**Ultra Vortex FAQ update for Jaguar

Other Jaguar Pages
~~~~~ ~~~~~~ ~~~~~

Other pages specific to the Jaguar included in here. Currently there is:

- Atari Jaguar Homepage by Nils Jacobsen

There are others that will be included, some containing more recent news, but the one above is the most organised and intuitive one I've came across.

****

8 Bit Atari Page by Ivo van Poorten
~ ~~~ ~~~~~ ~~~~ ~~ ~~~ ~~~ ~~~~~~~

Not maintained by me these pages cover the 8 bit formats of Atari machines and are very comprehensive. Nearly everything you could hope to find is contained within these pages.

****

What to expect in the future
~~~~ ~~ ~~~~~~ ~~ ~~~ ~~~~~~

Some structural changes are likely to appear in the next months. I will be introducing an announcements page where you can tell the World of anything you have to announce. Please send news of updates to your programs, Atari stuff for sale, and any other Atari announcements here (NOTE : Commercial companies should send information on products to be included in here and in the news sections).

Also coming soon will be a monthly editorial. In this I will try and sum up the month past and to give my opinions on how I saw things for Atari at that time. Hopefully I will be able to look back over many good developments in my pages and summarise them as they happened.

There is an outside possibility of starting a programmers and MIDI section in these pages but this is as yet undecided. I will judge whether or not to do this based on the kind of response I have. I do not want to repeat any of the good work done in these fields however by other Web page writers such as Christer Gustavsson.
~~~~

More support is needed for the questions and answers pages, although initially successfull people just stopped posting their questions. Although the odd one is still coming and answers are still forthcoming. Please support this, it is of benefit to anyone who uses it.

The Jaguar section should have a lot more news, pictures and reviews in the future. I now own a Jaguar and will soon be writing a review for Aliens vs Predator. I have tracked down a fair bit of news and am in contact with a few companies now and hope to get news from them on there products.

Extra pictures will appear due to my recent access to a colour scanner, enabling me to scan the latest pictures before the exist elsewhere on the Internet. I also hope to slowly get all the maps for AvP into these pages somehow?

Both the ST and Falcon sections should contain much more news in the future, along with more of the best PD/Shareware, and PD/Shareware reviews. I should have several demos hopefully in the near future for games coming out on these formats.

The Lynx section is to continue to get reviews and I will update the news as and when I get it.

Expect more links to Atari related pages in the future, aswell as links to all the Atari related newsgroups. There will be more newsletters, documents, updates to the FAQ's.

Expect further reviews from Andy and Frank, along with myself (watch out for the Apex Media review). Hopefully I can include more screenshots, and do a few program tutorials. Also Claus J. Pedersen (Stello author), Bob Brodie (former Atari employee) and Steven Davies have all offered to support these pages with contributions in the future.

Last but not least, after Christmas I may set up a feedback page, where you can send your feedback via a Web form. Until then please write with your ideas, critisms, comments, submissions (software, news, reviews, questions, etc), to me and don't forget that I am now the official maintainer of the Atari FTP list originally by Hallvard Tangeraas. All updates to this list should now be sent to me.

Thank you and see you with the updates to these pages next month!

****
NEWS RELEASE: THE TORONTO ATARI FEDERATION PRESENTS.....ACE '95!!
****

Remember this LOCATION and this DATE .....

>>>>>>>>>>>>>
>>>>>>>>>>>>> NORTH YORK CIVIC CENTRE
>>>>>>>>>>>>> (MEMORIAL HALL MEETING & EXHIBITION CENTER)
>>>>>>>>>>>>> 5110 YONGE ST. @ PARKHOME AVE.
>>>>>>>>>>>>> LOWER LEVEL (CONCOURSE)
>>>>>>>>>>>>> TORONTO, ONTARIO CANADA
>>>>>>>>>>>>>
>>>>>>>>>>>>> APRIL 1st & 2nd, 1995 (Saturday and Sunday)
>>>>>>>>>>>>> 9 AM to 6 PM & 9 AM to 5 PM
>>>>>>>>>>>>>

There is a time and place for every great event - and Atari Users are entitled to their share! ACE '95 is IT!!!!

WHO WILL BE THERE
==========
If you want to see DMC Publishing (Calamus!), GRIBNIF, BRANCH ALWAYS (Gemulator, PCXformer), Clear Thinking (Craig Harvey), Oregon Research, COMPO, Missionware, Scarborough Computers, ABC Solutions, IT'S ALL RELATIVE, cro_Magic, ICD/4Play/Catbox, TOAD, and about 20(!) other fabulous Atari Dealers and Developers ALL IN ONE PLACE ***** CALL US FOR THE LATEST EXHIBITORS LIST *****

....
....
..... ACE '95 IS WHERE THEY'LL BE!!

All the developers will be doing lectures and seminars on their superb software and hardware! <<<<<<<

Three daily door prizes! The Saturday and Sunday Grand Prize Draws! <<<<<<<

THE BEST SALE PRICES ON ALL ATARI SOFTWARE AND HARDWARE! THIS WILL BE THE TIME AND PLACE TO STOCK UP! <<<<<<<

The LARGEST gathering of the BEST Atari Dealers and Developers in YEARS! <<<<<<<

Dedicated MIDI area - demos, the latest hardware & software! <<<<<<<

Contests: Look for ENTRY FORMS for the ACE '95 Atari Creativity Competition! We're REALLY looking forward to this! <<<<<<<

Dedicated JAGUAR area - and plenty of Jag Game Developers <<<<<<<
on-hand, to answer *ALL* your questions!   <<<<<<<

MORE ATARI USERS IN ONE PLACE THAN YOU'VE EVER SEEN!   <<<<<<<
.... and that's a GOOD thing!   <<<<<<<

==========
==========
 ACE '95 ACE '95 ACE '95 ACE '95 ACE '95 ACE '95 ACE '95 ACE '95

==========

ACE '92 was a *HUGE* success. ACE '95 will be even better. Incredible buys! Incredible demos! Incredible new products! The very finest gathered in one place!

April 1st & 2nd, 1995 (Saturday and Sunday), in Toronto.

DIRECTIONS
==========

Getting to ACE '95 is easy. If you're coming from the United States, cross the border at Detroit, Fort Erie, Buffalo, Kingston, Champlain, Ogdensburg, etc.; get on Highway 401 and head for Toronto. When you get to the Yonge Street Exit (Hwy #11 on some maps), take it and go North for 6 stoplights, to 5110 Yonge St. (at Parkhome Ave.). Turn left and you're there! For those of you who take the QEW Highway from the border (if you cross at Fort Erie or Buffalo, that is), just follow it until you get to either Hwy #403, Hwy #427 or Don Valley Parkway (it's your choice): they all connect with Highway 401. Take the 401 to the Yonge St. Exit (Hwy # 11 on some maps), take it and go North for 6 stoplights and you're there. There is street-level and underground parking. Remember that your local AAA or CAA branch can supply you with a Triptik, Toronto Map & Ontario Road Map too! FOR MORE INFORMATION, PLEASE CALL US AT:

>>>>>>   <<<<<<
>>>>>> 416-752-2744 <<<<<<
>>>>>>   or   <<<<<<
>>>>>> 416-225-5823 <<<<<<
>>>>>>   <<<<<<

YOU MAY BOOK ADVANCE TICKETS & HOTELS, BY CALLING EITHER OF THE PHONE NUMBERS. PLEASE LEAVE A NAME A NUMBER WHEN YOU CALL. WE WILL GET BACK TO YOU VERY QUICKLY!! Call SOON ....

THE BEST SHOW EVER
==========

 | \        | |             / |
 |_/ A T A  \/| N C E R T A I N  /
------------------------------ o ---------------------------
```

Data Uncertain Software is pleased to announce the availablility
of the FSMsynth advanced compiler for CLA-FSMedit state machine
designs.

What It Does
============

This new addition to the CLA Digital Developer system provides
more advanced synthesis of Finite State Machines than previously
available from the FSMedit package. You still use the FSMedit
bubble diagram editor to design FSM's, but can now use a more
advanced tool to produce PAL images.

Features of the new compiler include:

o Target many more devices (from a 16L8 right up to MACH).

o More efficient algorithm typically reduces OMC usage by 30% over
  FSMedit synthesised designs.

o Target languages: PALASM, PASSM, VHDL.

o Takes FSMedit files as input.

Used in conjunction with the CLA-VHDL compiler, FSM may be fully
simulated & integrated into larger CLA designs.

How Do I Get It
===============

Current users of CLA can request this package at no extra cost.
Users of the CLA Demo version will need to register before they
can also use FSMsynth.

Platforms
==========

As with the rest of the CLA system, currently FSMsynth is only

available for Atari compatible machines running TOS, multiTOS,
MagiC or Geneva (such as the Atari ST/TT/Falcon, the Medusa T40
and the GE-Soft Eagle).

FSMsynth should also run on the Apple Macintosh under MagicMac
from Application Systems Heidlberg.

```

I have just succeeded (finally) in uploading my game Reflex to the archive
at brunner.cnam.fr. It is a addictive, challenging, substantial,
involving, fast-paced, sonically, musically and graphically meritricious
game with added whitener. Try it!

Don't just take my word for it, though. ST Review gave it 5/5 stars - a
"bargain buy" - "Reflex isn't just good - it's divine". ST Format said
"it's one of those games which starts out simply and slowly sends you
mad". So why haven't you seen it before - because it was way ahead of its
time. See what you think anyway. Only 150K...

Ellis Breen

Falcon 030 4Mb 65Mb HD - tons of samples, music, graphics and ideas.

BTW Reflex runs on the Falcon with Backwards on ST - emulator mode.

src.doc.ic.ac.uk (146.169.2.1)........./packages/atari/uni-paderborn
 PS!!! 155.198.1.40 is more reliable!!!           - (uni-paderborn, GERMANY)

- to find the numbered address of the FTP site, use the following command,
  while inside FTP:  ftp> !host FTP-address [CR]  i.e. "!host cs.bu.edu"

DOWNLOADING FILES, Instructions:    [CR]= carriage return/return/enter
--------------------------------
1)  Go to the directory where you want the files to be downloaded.
2)  ftp [CR].
3)  open {ftp address} [CR].                  i.e. "open ftp.uni-kl.de" [CR]
    OR use the (IP) number address, NOT both!
4)  "Name": anonymous [CR].
5)  "Password": {full e-mail name/address}.  i.e. "hallvart@ifi.uio.no" [CR]
```

6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once.
    i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having
    to reply "y" for each file when asked "get {filename}?".
12) quit [CR] to end FTP session and go back to UNIX
13) close [CR] to close the FTP site you're currently on, so that another
    site can be opened without having to set bin, hash, prompt etc. again.

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on
  which the programs were intended, or in UNIX ....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after
  uncompressing .Z and/or .uu.
  Use the appropriate decompression program for this.

- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
    i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys,
    xlinksys etc...) (ALL files with "sys" in their names)
    i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh,
    xlba.lzh etc...) (ALL files ending with ".lzh")
    i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to
  another computer (use an other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

Part of this is dependent on you having the GNU msdos-utilities available
at your site. If you don't, ask your local system operator how to transfer
files to/from MSDOS disks.

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
                           i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:

- mdir [CR] to show disk-directory/space left.

- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)

- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for
  "low density")

- mcopy a:{filename on disk} {copy filename} [CR] to get a file from
  disk to computer. i.e. "mcopy a:dlist.txt test1.zip"

- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

- eject [CR] to eject disks from disk-drives that don't have "eject buttons".

- -
